## As The Editor Sees It

**H**APPY NEW YEAR! Indeed, there are so many things to be happy about, so many causes for gratitude, that we scarcely know where to begin, and once begun there seems to be no ending. This is the first New Year's Day in four years that has seen the world free of the horrors of war, and this is, of course, our greatest reason for rejoicing.

The great burden of the war did not fall upon us in America, however, until the past year, and, we, of the building trades, have had many trying and anxious moments during this period, when all personal considerations had to be put aside for the accomplishment of one end—Victory.

Victory and Peace are ours at last, and the New Year is bringing with it a new era of prosperity in which the building trades are to be rewarded for their patience and loyalty during the prosecution of the war.

Furthermore, Philadelphia is a city eminently able to transpose the war time rush of business into permanent prosperity. Bankers and business men generally are most optimistic in their views on this subject, and with very good reason, we believe.

The municipality itself is prepared to execute an immense amount of work, as soon as the necessary labor is released from war industries.

About \$90,000,000 is still unexpended of money arranged for to carry on pub-

lic work which was interrupted by the war. More than \$50,000,000 is for elevated and subway construction, which practically has been at a standstill for eighteen months and which will give employment to a small army as quickly as it can be resumed.

There is \$2,500,000 available for a new public library and a like amount for an art gallery. More than \$3,000,000 is available for port improvements, with a plan approved calling for a total of \$24,000,000, while more than \$30,000,000 has been approved for work upon streets, sewers, bridges and grade crossings.

Besides these public improvements we are all only too well aware of the dearth of houses in and around Philadelphia.

It is conservatively estimated that 25,000 new houses must be erected in the Philadelphia district as quickly as possible and many manufacturers are anxious to start work upon extensions to their plants as soon as necessary material can be secured.

William R. Nicholson, president of the Land Title and Trust Company, in speaking of the building outlook, said:

"Our company, of course, is vitally interested in building operations and we try to keep in as close touch as possible with conditions. I should say there is every indication of a most prosperous era in the building trades beginning shortly.

"The embargo by the Government upon building materials has resulted in an almost complete stoppage of operations

here excepting for Government work. These embargoes now are being lifted and as soon as materials are available I look for a most active period of building.

"Our company arranged for the construction of 1,600 houses for workers at Hog Island and we are going ahead with the construction of 400 more. In Hog Island and the other shipyards here is a great foundation for permanent prosperity. Work is going to continue at these yards without regard to the war's end. There will be a let down in overtime work, but these tremendous industries will hold their thousands of men."

\* \* \*

**I**N connection with the "Own Your Home" idea which is gaining such favor throughout the country, there will be held in Philadelphia, on January tenth, a great mass meeting. To this meeting will be invited, says William H. Wilson, publicity manager of the campaign, "Mayor Smith, all of the Councilmen of this city, the six Philadelphia Congressmen, Senator Penrose, the business and trade organizations, and heads of all the great industries of the district, the labor organizations, the editors of the daily and trade papers and pastors of Philadelphia churches and other church officials, principals of Philadelphia schools and a host of others who are interested in the welfare of the people of the city. The place of this meeting has not yet been decided upon, as

negotiations are in progress for the engagement of a suitable auditorium. We intend to have as speakers the most prominent men in various lines of endeavor in Philadelphia.

"At this meeting it will be pointed out that the campaign intends to reach every man and woman in Philadelphia who does not now own his or her home. The inestimable benefits which come from home ownership are unknown to scores of thousands of families of Philadelphia. This, no doubt, is due to ignorance of how easy it is for any man or woman of character to own his or her home. We expect one of the most beneficial meetings which ever has been held in Philadelphia for the promotion of a great civic movement, and we also expect it to be one of the largest ever held here for a similar purpose."

\* \* \*

**D**ESPITE the unusual and varied factors affecting construction work at this time, indications point to the greatest building revival during 1919 which this country has ever experienced, writes Noble Foster Hoggson, President, Hoggson Brothers, Builders, New York. This is true largely because certain classes of structures must be erected almost at once to provide for actual demand.

First of all, in the larger cities, apartment houses and dwellings will lead the way, but closely following will be office buildings, lofts and industrial structures. Then there will be a tremendous amount of bank building. All over the country our financial institutions have been carrying on their work in their old homes, in crowded, inadequate quarters, waiting for a favorable time to erect new buildings or modernize their quarters by remodeling. Banks have never been more prosperous, and the bankers seem to feel that not only will they be meeting an economic need by building now, but what their action in this regard will set a precedent in their communities and encourage other owners to build. It is the specified wish of the Government that, in order to provide employment, construction work be put under way at the earliest possible moment.

In the industrial as well as in the domestic and commercial fields, building should see a large and healthy increase in volume. New factories must be built; plant extensions are an economic necessity; war plants, instead of being scrapped or abandoned, will in many instances be altered for peace work.

Housing for employees, which received such an impetus during the past two years, will be carried out on a vaster scale than we had ever thought possible. Employers have recognized the actual money-value return of providing good

housing accommodations for their employees. It is fatuous to believe that the employers have not profited by the lessons of the war. They have learned that contented workmen are the best possible asset, that high labor turnover is wrong and expensive, and that proper housing is one of the greatest, if not the greatest, factor in reducing labor turnover and keeping employees happy on the job.

The immense amount of reconstruction work to be done in France and Belgium is going to affect building conditions in this country more than is generally realized. This is true particularly in regard to prices for materials. The excessive demand for certain materials for use abroad, is most likely to keep prices in this country up to the present high level. Steel, so far, has been the only material which has shown any tendency to decline in price, but, with the great number and kinds of buildings needed, the matter of cost will probably not enter into calculations as much as under ordinary conditions. It should be remembered that since 1914 this country, except for a short period in 1916, has been underbuilt.

Building must cease being a gambling proposition, the owner taking a long chance on getting his structure erected for a sum of money which he sets aside in the beginning. In the future there must be a closer and fairer relationship between the owner and the builder. The builder must gain the confidence of the owner, and, in turn, the owner owes certain duties to the builder. Under the usual building procedure the builder is a gambler, too; taking a job on a low competitive bid, and hoping by some hook or crook to make money on it. The formation of the Associated General Contractors of America, recently worked a great step forward in raising the building industry to a higher level, and it is through movements of this kind that the investor will feel free to put his money into building operations,

\* \* \*

**T**HERE is a host of good suggestions presented by C. Stanley Taylor in "Prepare Now to Build Homes in the Spring of 1919" in the December issue of *Realty*. Mr. Taylor's article is so full of good things that we deem it very helpful to the architectural and building trades. Mr. Taylor writes:

"With the signing of the armistice which marks the closing period of the world war, national interest in the subject of homebuilding passes from generality into a constructive stage which will result in the building of great numbers of American homes within the next two years. This interest is not limited to prospective home-owners alone, but is shared by speculative and investment

builders, loaning interests and realty operators and brokers.

During the period of war, with the exception of the construction of homes for war workers, America has necessarily paused in its homebuilding—with the result that the country is underbuilt in this field and the demand for dwellings has become acute. Perhaps it has been fortunate that time for reflection has been given before a fresh start might be taken. Certainly the art of economical homebuilding has taken great strides during this period, and in this country we shall probably never go back to the old, careless method of housing which has marred our cities with slums and cheap speculative buildings.

The first great interest of the prospective builder of homes is to know when building materials and labor will be released for this purpose. Significant, as an answer to this question, is the recent decision of the War Industries Board in its first release of restrictions on the building industry. An analysis of this action, as made by experts, is of immediate and direct interest to the homebuilding fraternity.

In studying conditions in the construction field we find the following interesting facts:

Already more than \$20,000,000 worth of construction work has officially been released by D. R. McLennan, chief of the Non-war Construction Section of the War Industries Board. Stock taking in most industries will be handled where possible in December instead of January.

Estimates of the quantity of work ready to go ahead vary. During September \$2,500,000,000 worth of construction work was active with a plant capacity sufficient to take care of only \$2,100,000,000 worth of work. The highest the country has ever reached in building material production has been equivalent to about \$1,700,000,000 in actual building requirement.

After the signing of the armistice a reaction occurred within a single week, and the volume of private or non-war construction work was thrown upon a building material market that had been depressed by a normal national annual movement, amounting to a billion and a half and crumpled to barely a half a billion—with half a world lying in ruins and the United States 33 1/3% underconstructed.

It was this problem that called for drastic action. A stampede to construction with another necessary Liberty Loan in sight and the army to be demobilized would produce a situation of very serious mien. This is the way it was solved. The hardest pressed person during the necessary restraint upon building con-

## PENNSYLVANIA Construction News

**Residence, Lebanon, Pa.** Architect, A. A. Ritcher, Sixth and Court streets, Reading, Pa. Owner, Clarence Snively, Eighth and Cumberland streets, Lebanon, Pa. Stucco, 2 stories, 40x26½ feet, wing 15x30 feet, slate roof, stone foundations, hot air heating, electric lighting, yellow pine floors, hollow tile. Plans in progress.

**Victor Theatre (changes to Store), 744 Penn street, Reading, Pa.** Architect, G. L. Gerhard, 619 Penn street, Reading, Pa. Owner, Wm. Kurtz, on premises. Plans in progress.

**Bakery (add.), Third and Grape streets, Reading, Pa., \$40,000.** Architect, Calvin Young, 246 Jameson Place, Reading, Pa. Owners, Reading Biscuit Co., care of R. Esterly, on premises. Reinforced concrete and brick, 4 stories and basement, 75x90 feet, concrete and slag roof, concrete foundations, electric lighting, reinforced concrete floors, hollow metal skylights, 2-ton elevator, roof ventilators, metal window guards. Plans now being drawn. C. H. Schlegel, Mt. Penn, Pa., will build.

**Post Office, Franklin, Pa.** Architect, James A. Wetmore, Treasury Department, Washington, D. C. Owners, U. S. Government, care of Supervising Architect, Treasury Department, Washington, D. C. Brick, reinforced concrete, granite and terra cotta, 1 story and basement, 67x54 feet 9 inches, and two wings 40x52 feet, composition roof, concrete foundations, steam heating, electric lighting, tile, marble and terrazzo work, metal lath, safety treads, metal weatherstrip, rolling steel doors, damp-proofing, ornamental iron work. Owners taking bids, due January 17th. Wills-Ludwick Co., 1706 Sansom street, Philadelphia, is figuring.

**Mill Building, Clifton Heights, Delaware Co., Pa.** Architect, H. M. Hokanson, Presser Bldg., Phila. Owners, Clifton Yarn Mills, Clifton Heights, Pa. Brick, 3 stories, 131x64 feet,

slag roof, cement and maple floors, rolled steel sash (heating, sprinkling system, tank, elevator, electric wiring and fixtures reserved), stone foundations, wire screens. Barclay White & Co., 1713 Sansom street, are taking sub-bids.

**Housing Colony, Yeadon, Delaware County, Pa.** Architects, Simon & Simon, 249 South Juniper street, Philadelphia. Owner, Theodore Presser, 1712 Chestnut street, Philadelphia. Stone, brick and stucco. Preliminary sketches being drawn. Too early for details.

**Sanatorium (add.), Cresson, Pa.** Architects, Harris & Richards, Drexel Building, Philadelphia. Owners, Commonwealth of Pennsylvania, care of B. Franklin Royer, M. D., Acting Commissioner of Health, 1900 Race street, Philadelphia. Stone and concrete, brick and terra cotta, 3 stories and basement. Buildings (2 ends) 46x25½ feet, asbestos shingle roof, cement, yellow pine and composition floors, metal lath, concrete foundations, slate work, hollow metal sash, kalamein doors (heating, lighting and plumbing reserved). Owners taking bids, due January 10th at noon. Deposit of \$25 required.

**Cottages (6) and Passages, Sanatorium at Hamburg, Pa.** Architects, Harris & Richards, Drexel Building, Philadelphia. Owners, Commonwealth of Pennsylvania, care of B. Franklin Royer, M. D., Acting Commissioner of Health, 1900 Race street, Philadelphia. Brick, reinforced concrete, terra cotta, A & D, 2 stories and basement, 179x25 feet, wing 35½x34 feet, E and F, 161x25 feet, wing 53½x34½ feet, B and C, 174x25 feet, wing 35½x34½ feet, asbestos shingle roof, concrete and canvas floors, metal lath, concrete foundations, slate work, hollow metal sash and skylights, safety treads. Owners taking bids, due January 10th at noon. Deposit of \$25 required.

**Bank, Centre Square, York, Pa., \$100,000.** Architects, Gemmell & Billmeyer, Rossmiller

Building, York, Pa. Owners, First National Bank, care of M. A. Keyworth, President, York, Pa. White Georgia marble, 1 story, 40 feet high, 35x114 feet, concrete foundations, hot air heating, electric lighting, tile and marble work, rubber tile floors. Plans in progress.

**Hospital, West Chester, Pa., \$300,000.** Architect, H. J. Harper, Church Building, Wilmington, Del. Donor, Pierre S. duPont, Wilmington, Del. Owners, Chester County Hospital, West Chester, Pa. Brick, steel, stone and concrete. Plans in progress. Too early for details.

## Pennsylvania Contracts Awarded

**Residence and Store, corner of Minor and Willow streets, Reading, Pa.** Architect, W. A. Fink, 426 Franklin street, Reading, Pa. Owner, H. J. Raudenbush, Chestnut street and Perkiomen avenue, Reading, Pa. Brick, 3 stories, 17x72 feet, tin roof, stone foundations, hardwood floors, electric lighting, hot water heating. Contract awarded to J. Fassnacht, Reading, Pa.

**Power Plant, River Road and Exeter street, Reading, Pa., \$110,000.** Architects, Muhlenberg Bros., 513 Penn street, Reading, Pa. Owners, Carpenter Steel Co., care of C. W. Crawl, on premises. Brick, concrete and steel, 1 story, 61x180 feet. Contract awarded to Beard Const. Co., 658 Penn street, Reading, Pa.

**Creamery (alts.), Third and Washington streets, Reading, Pa., \$5,000.** Architect, Calvin Young, 246 Jameson Place, Reading, Pa. Owner, J. C. Zeigler, on premises. Interior repairs and reinforcing concrete floors. Contract awarded to G. Kline, Reading, Pa.

**Garage, 904 Court street, Reading, Pa., \$3,500.** Architect, A. F. Smith, 1029 Penn street, Reading, Pa. Owner, J. H. Close, 307 Penn street, Reading, Pa. Brick, 2 stories, 15x34 feet, slate roof, hot air heating, electric lighting. Contract awarded to H. Daudenbush, Reading, Pa.

## Why the Underwriters approve Barrett Specification Roofs—

Ashton Building,  
Grand Rapids,  
Mich. Gen'l Con-  
tr's: Campbell &  
McNabb, Grand  
Rapids, Mich.  
Roofers: F. J.  
Sokup & Co.,  
Grand Rapids,  
Mich.

Photo above shows the roof of the Ashton Building in Grand Rapids after a recent fire.

The building carried a Barrett Specification type of roof which served as an air-proof fire-blanket—and served well!

A report of the fire states that the firemen played two heavy streams on this roof for two hours while the fierce fire raged in the upper stories.

Yet the roof did not burn and only succumbed *where the destruction of the roof boards and beams brought about a complete collapse of the support.*

In fire that twisted steel and melted copper, the roofing only smoked, softened

and cooked; but it did not blaze or furnish fuel to the flames!

Notice how strips of it hung on the rafters where flames could attack it edgewise, and yet it was not consumed!

No wonder the Underwriters Laboratories put Barrett Specification Roofs in "Class A" and accord them the base rate of fire insurance!

### 20-Year Guaranty

We now guarantee Barrett Specification Roofs to last for twenty years without cost for maintenance. The guaranty is a Surety Bond issued by one of the largest surety companies in America, the United States Fidelity and Guaranty Company of Baltimore. It is offered on all roofs of fifty squares and over in all cities in the United States and Canada of 25,000 population and more, and in smaller places also where our Inspection Service is available.

*A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.*

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

## Proposals

### Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

### INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 18, 1918.—Sealed Proposals will be opened in this office at 3 P. M. January 15, 1919, for miscellaneous changes in the United States Post Office building at Portsmouth, Va. Drawings and specifications may be obtained from the Custodian of the Building at Portsmouth, Va., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 24, 1918.—Sealed Proposals will be opened in this office at 3 P. M. January 14, 1919, for furnishing the labor required in the construction complete, with materials that will be furnished by the Government, of the South Building for the Hygienic Laboratory at Washington, D. C. Drawings and specifications may be obtained at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### AS THE EDITOR SEES IT.

(Continued from Page 4.)

struction was *the small man without moderate holdings* who suffered extreme hardship through being prevented from making improvements.

The Government gave him a free rein provided his operation did not exceed \$10,000 in cost. All work between \$10,000 and \$25,000 in cost was left to the discretion of the local Councils of National Defense. Jobs beyond that figure were made referable to Washington for final permit.

In the meantime building material manufacturers were encourage to proceed with the manufacture of building commodities at top speed. Labor that ten days ago was almost impossible to obtain was suddenly released to carry out this plan. One lime manufacturer who wanted a large number of men was provided with his entire quota inside of three hours. Coal for fuel in such plants was released.

War industries plants not producing materials necessary in a non-combating army will be demobilized gradually. Then the armies returning from France and other countries will begin to arrive, and with Federal control of the building situation, with materials in fair demand and controlled according to domestic and foreign requirements, both as to supply and price, the home-coming armies can be absorbed into the construction industry, both private and public, which, next to agriculture, will be the major channel of military dispersement.

The building industry, through this plan, emerges with less than a week's notice from the most depressed of non-essential industries to a place of paramount national and international importance. Without general organization as in the steel industry, far-sighted officials fore-

saw the danger of lack of co-operation and the great danger of price wars, etc., unless not only the demand, but the supply of building materials were placed under Government supervision.

The situation, as far as domestic conditions were concerned, could be controlled by an appeal to the patriotism of the American builder and the loyalty of the Yankee building material manufacturer, financier and Real Estate owner, but the situation developed by reason of the revelations being made by architectural emissaries sent abroad to study the rebuilding problem in devastated areas in France, Belgium, and other war-wrecked countries, regarding the inability of their own people to supply materials enough to meet the demand, at least for the finer structures.

There will develop an export trade in all kinds of basic building materials within the next few months. Common brick from the Hudson River is even now in certain buildings in France, and there are a "few" inquiries for hollow tile for export. The same may be said for cement. Steel already is an export commodity and there is likelihood of a foreign movement in plaster and lime. Companies have already been organized to export mill work and kalamein.

The attitude of the New York City financiers is directly in line with this new readjustment policy with relation to building construction. The Dow Service Daily Building Reports was informed on Friday by an officer of probably the largest lending institution in the country that no engagements would be made for building construction in New York before next September, except as approved and in accordance with the Federal plan.

This policy is shaped entirely so as to give the small operator a chance to recover before the entire building move-

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

**BOWERS BROS. & CO.**

 1629 Ludlow Street  
 Philadelphia, Pa.

ment is thrown fully open as outlined in the Federal program. There is no restriction placed upon savings banks and other building loans, if the project has official approval.

This, then, is the point of interest to homebuilders. Under the Federal release any project up to \$10,000 may be carried out without permit. Where the construction of a group of moderately priced homes is contemplated there will be little trouble in obtaining official permission to carry out the project as the Government recognizes the immediate need for homes.

Every indication seems to point out next spring as the logical time to commence homebuilding. During the winter period there will be a greatly increased production of building materials which will be available for the smaller builder if the wise policy of the Government continues to insure his protection for a limited period. Undoubtedly, when restrictions are generally removed and many large projects now under consideration are actually started, there will be a diversion of basic building materials and of labor to this larger field and the prospective homebuilder will find more difficulty in carrying out his project. Thus the wisdom of preparing for homebuilding next spring is apparent so far as the attitude of the Government is concerned, but there is still for consideration the much more difficult question of the price of building materials and resultant cost of building.

There can be no doubt that in the average residential district of any part of the United States the cost of building a house, affected by labor and material costs, has been increased approximately 50%. Thus a house which in the period before the war would cost \$5,000 to build will cost at least \$7,000 and probably \$7,500. The question, then, at first consideration, would seem to be how soon this cost will return to a pre-war basis. It is safe to assume that this will not happen for at least five years and probably for many years after that.

Analyzing this question of building material costs, we find that in the production of building materials, labor is the great factor upon which costs are determined. The mining, digging and cutting

of raw materials and fuel for manufacture are largely the production of labor. Passing through the various stages of building material manufacture and into the production of finished buildings we find labor bearing a burden of at least 60% of production.

It is safe to assume that wages are not to be greatly reduced for many years. Workmen have become educated to greater incomes than in the period preceding the war, even though the cost of living has kept pace with the increased pay-roll. The making and spending of more money has become the fashion of the day. It is significant to note that at no time has the middle-class jewelry business carried on such a volume of trade as in the latter part of the war period.

The fact that the United States has during the recent years become a great creditor nation, coupled with its vastly increased merchant marine bids fair to guarantee large production for export trade. New industries have been created to produce materials for home consumption for which we have heretofore been dependent upon foreign countries. Our industrial field now enters a period of expansion which is still largely unrecognized. Every industrial producing unit created for purpose of war material production will seek, and in most cases find, a new outlet for its manufacturing potentiality. Labor will be in demand for municipal improvements, large building operations the continued manning of great factories. It is apparent that for years to come we are called upon to feed, clothe and even house millions of persons abroad. This means a steady demand for labor in this country.

It is apparent that we cannot look for a great reduction in the price of building materials for many years to come. Therefore, in planning to build next spring, the homebuilder will be ready to act and can at that time be governed by new conditions which then will clearly define what may be expected within a period of several years.

Admitting that the future does not promise a great saving in construction cost, it would seem that the homebuilder must of necessity reconcile himself to paying more for his home, placing this increased cost in the same philosophical

category as that of food, shoes and clothing. There is one saving factor, however, one means through which the cost of the home may be materially reduced and this is worthy of careful study.

We refer to the practical and economical planning of the home—and here is an activity which should interest tens of thousands of persons in the United States during the winter months. The object of this study should be to eliminate every inch of waste space, every room which is little used and to so cut down the cost. The fact is that by careful planning an amount of home utility may be purchased next spring for \$5,000 equal to that purchased by the same amount of money in the average manner of spending it for homebuilding before the war.

We are not practical homebuilders in the United States. We do not make the most of our rooms as is done in the moderate cost houses of England or France. Why? Because we have never been forced to this economy? Because we have lost the appreciation of real home surroundings? No! Simply because the man of little income has lived in the truest sense beyond his means. He has demanded at a small price the same type of house that the wealthier man has built and he in turn has tried to incorporate in his home the features of the mansion. To this taste the speculative builder has pandered through the medium of cheaper materials and inferior work.

Let the American homebuilder once realize this fact, seeking economy in design, and we will enjoy a new class of homes in which comfort will outweigh "front" and the instinctive home spirit of the average American will be fostered and his appreciation of simple artistic design and furnishings will bring to the home a real creative pleasure which is now enjoyed by few.

The various possibilities in economical design are gradually coming to popular recognition. This fact forecasts a veritable Renaissance in the art of homebuilding in this country. Of this condition every builder, Real Estate broker and operator should be cognizant. The possibilities of the combined kitchen and dining-room, the practical use of the living room, abandoning the useless "par-

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasket Street Wharf, Delaware River, Philadelphia.

lor"—such are the possibilities which should be in the minds of the planner of homes for whatever purpose."

\* \* \*

**N**OTHING is of greater importance in the present period of reconstruction than the proper adjustment of the labor situation. As a means of solving this problem now confronting the industrial world.

A conference of far-reaching importance will be held in Washington, beginning January 6, when the United States Employment Service of the Department of Labor opens a two weeks normal training course for examiners. Upon the completion of the course those who have acceptably passed through it, will be sent out a trained and efficient staff to make standard the use of a common agency under the Government, for labor distribution and placement.

Thirty employees of the Employment Service have been designated to take the first course, on completion of which they will be returned to their own States, so far as possible, and there will train their own examiners for service.

Men from fifteen States have been selected to attend this first conference and take the course, and will generally be assigned to field work in pairs.

Instructional talks on the scope and methods of the service will be given by administration officers in charge of the various divisions of the work and topics of major importance dealing with the part of the Employment Service in the whole field of industrial adjustment, will be discussed at evening lectures, by men who are leaders in shaping the labor programme for the country.

At this conference there will be issued an official set of instructions covering the same topics for the work in the States, thus gaining uniformity of instruction to local officers. The course is an intensive one, embodying thoroughness and breadth of instruction, as may be inferred from a glance at the programme and plan of study. Many prominent persons will give the students the benefit of their experience and study of the subject, which, it is agreed, is one of the great vital problems with which the Government has to deal. The course and subjects for discussion are as follows:

First Day—Explanations of Reasons for and Methods of Conference and Training in State. Purpose and Development of U. S. Employment Service. Present Industrial Conditions. Competitive Basis but maintaining Advanced Standards gained in War Periods. Ne-

## We Drill Wells and Get Water Test Borings and Soundings

LET US SUBMIT PRICES

**RIDPATH & POTTER CO**

487 Bourse Building  
Philadelphia, Penna.

cessity for knowing Local Conditions. The limited but vital part of the Employment Bureau in the field of Industrial Adjustment.

Second Day—Round Table on Office Layout. General Discussion of Work to Date. Functions of Director General. Contacts with Department of Labor, etc. What the Examiners should Note in Modern Industrial Production. Special Agencies with Which Examiners Must Work. Need for local Survey of Community. Industrial Labor and Government Agencies. Knowledge of Their Standards.

Third Day—Round Table on Interviewing and Placement. Plans for Demobilization of Soldiers and War Workers. Enlightened Industry and the U. S. Employment Service.

Fourth Day—Interviewing Placement. Fiscal and Personal Regulations. Special Considerations in Placing Women.

Fifth Day—Round Table on Special Departments. Field Organization. Coordination of Sections and groups within Service. The Examiner and his contact with employers, organized Labor and the Service.

Sixth Day—Trade Tests. The Morale of the Service. Dinner and good fellowship.

Eighth Day—Functions of Federal Director. State Organization—Contact with Labor and Jobs. Clearance in States. Round Table on Reports and Forms. Trade Tests.

Ninth Day—Organization of Local District. Labor Community Boards. Survey of Community Needs and Possibilities. Clearance Summing Up. Round Table on Files and Filing.

Tenth Day—Organization and Work in Local Office. Sources of Work. Round Table on Job Soliciting. Employment Experiences Abroad and Successful Extension here.

Eleventh Day—Special Problems in Junior Placement. Special Problems relating to Handicapped. Round Table on Recruiting.

Twelfth Day—Round Table on Casual Labor: Industrial, Railroad, Farm, Day

Work (Domestic). The Organization of the Casual Labor Market. Written examination. Summing-up Course and Methods of Training in States. The Potential Permanent Value of the U. S. Employment Service.

Thirteenth Day—Individual Conferences. Instructions on Methods of Training and Rating Examiners.

Nathan A. Smyth, Assistant Director General of the U. S. Employment Service, in commenting on this programme, says:

"The training of our personnel is the most important thing we have before us. We have rendered effective service to the nation in assuring a sufficient working force to those industries engaged in vital war production. We are launched upon a vital programme to replace in the industries of peace the millions of men and women who have served in the military and industrial armies of our country. And we are looking forward to the time when through a well-established and efficiently co-ordinated chain of labor exchanges we can do much to eliminate unemployment and the retardation of production.

"Born of the war and tested by it, we have yet before us the real test of success. From now on we can serve the workers and in industries only if we are efficient. We have no repressive powers of law; we can justify our existence and establish the long needed and universally desired public employment service, only if we make good. Our success depends primarily upon the daily work of the examiners in the local offices. By the quality of their work, by their comprehension of the difficult and delicate task that is theirs the Service will be judged.

"In order, then, that we may all uniformly grasp the vision of our work, and may intelligently develop a standard practice in the field of regularized employment, we are inaugurating a programme of training for all the personnel of our Service. The instruction that is to be given at the first Normal Conference, and the content of knowledge that will develop therefrom—for we shall learn much

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

from the experience of the States—will be carried back to all the examiners and others in the Service who represent it before the public.

"We call upon the Federal Directors throughout the country to give their heartiest support to this work, feeling that it is the keynote of our future success. And we call upon all members of the Service to enter upon this programme of mutual training and self-development in the spirit of fellowship and professional pride that will make our common task a truly great service to the people."

\* \* \*

**D**EVELOPMENTS affecting industrial development in the United States during the war have been:

1. The creation of the National War Labor Board—for the settlement of labor disputes by mediation and conciliation.
2. The establishment of the United States Employment Service—with about four hundred offices throughout the country—for affording recruiting, clearing and distributing facilities for war industries labor.
3. The development by the National War Labor Board of a body of labor decisions which will form a basis for the adjustment of future industrial difficulties.
4. The fixing in many cases of a minimum wage and minimum scale of hours by the War Labor Board.
5. The creation of the Federal Board for Vocational Education—to re-train, re-educate and rehabilitate disabled soldiers and sailors.
6. The increased employment of women, particularly in war industries.
7. The transference of many men, women, and boys not only into the major industries, but from underpaid or "blind alley" jobs.
8. The consequent addition of many trained workers to the country's industries.
9. Also the consequent disturbance of conditions relative to production in many industries,—to be followed, after the war, by another "general post."
10. Great increase in wages,—to a degree which can scarcely be maintained in after-the-war readjustment.
11. The dawning recognition that material advantages of Labor—high wages, fewer working hours, good factory conditions, steady employment—do not, except, perhaps, temporarily, lessen the number of strikes, disputes, or difficulties with production; and that, therefore, there must be evolved a new incentive for the industrial worker. This recognition is exemplified by—

12. The adoption of the employees' representation plan by such large concerns as the Standard Oil Company, the Midvale Steel and Ordnance Company, the Lukens Steel Company, and the Colorado Steel and Iron Company.

#### HOUSES FOR FARM HELP.

The attempt to relieve the shortage of farm help by recruiting volunteer labor in the cities may prove more or less effective in the crisis of saving the wheat crop, but there is small chance of it lessening the farmer employer's troubles during the remainder of the year. The harvest hand volunteer from the city regards himself as the emergency man only, abandoning his usual tasks to assist in saving the country's bread supply, and even if he should demonstrate an aptitude for farm work he is ready to return to the city when he has done his bit in the wheat field. With the great majority of farmers harvesting the wheat is only one of many tasks, and the labor problem looms larger than ever after the city helpers are gone.

It is very evident that the farmer is going to be compelled to adopt new and extraordinary measures if he is to attract and hold the help he needs in the operation of his business. Marked increase in wages have failed to do the trick. The employer of farm labor must seek another way out. Here is one way—a way that is not particularly new, except that it be put into execution instead of merely being talked about, as it has been mostly in the past:

*Make living conditions more attractive for the hired help on the farm.*

That idea, first off, may not particularly impress some farm owners, but if they will let it sink into their systems and ponder it a while, they will begin to see that it has some remarkably convincing features; understanding at the outset that, when "more attractive living conditions" are mentioned, it is not meant that the farm must be equipped with a motion picture show and ice cream soda fountain, but that the accommodations provided for the farm employees approximate those enjoyed by folks in town. In other words, give them quarters to themselves, where they can be comfortable in their own fashion in their leisure hours or in times of enforced idleness, and where they can enjoy some measure of privacy and independence of action.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

## The Page "Ad"

"I like the clean, outstanding appeal of the page ad," said an advertiser recently, "but I'll be frank to say that I've never been able to convince myself that it can be made to pay."

"Have you ever tried out a whole page?" he was asked.

No. He hadn't. But he knew what a page of space would cost, and he couldn't get away from a certain overhang of doubt that the additional results would prove commensurate with the extra outlay.

We mentioned Wanamaker, who uses a page a day regularly, varying this program now and then by making it two pages.

Oh, yes, of course. But then Wanamaker's case was quite different.

We asked him to point out "how" and "why."

The truth of the matter is that the page ad is just as much more effective than the small ad as the big show window is more effective than the small show window.

To be sure, in the case both of the ad and the window a whole lot necessarily depends on just what you put into them and how you dress it up.

It wouldn't be good business to buy a page of space in order to work off a string of poor sales-talk.

But, assuming that the sales-talk is "right" and the article it is designed to sell an article that has real merit and utility, the page ad is actually the short cut to results.

The first object of any ad is to get the attention of the reader.

Nothing does this more effectually than the page announcement.

We have in mind an advertiser who slips a page space into his regular schedule now and then just as an interest-reviver.

He tells us it pays big.

Whether it would pay as handsomely in your case, we are not in a position to say.

Why not try it out?

The cost is not excessive.

Call Mr. L. S. DeLone.

## As The Editor Sees It

A CLOSE study of the problems of the reconstruction serves to point out two most vital factors in the solution of these problems—organization and co-operation. It goes without saying that war-time conditions will not continue and it is not desirable that the pressure of war-time should continue. There has been a demand for materials and labor in excess of any possible supply, and the conditions thus created in the nature of things were abnormal and temporary.

It cannot be questioned that the general tendency will be downward from present levels, but there are counter influences which will tend to hold the movement in check. The most important of these influences is the high cost of living, which, owing to the situation in foodstuffs and clothing materials seems not likely to decline much before another world's crop has come to market. It is very desirable that the general wage scale and living costs shall decline together, so that the wage-earner may lose nothing of his present command over the goods which enter into his budget.

In due time the cost of living will certainly come down. It would be impossible by any concert of action that can be imagined to keep them at the present level. Farm products are bound to follow the law of supply and demand, and the development which is going on in agriculture, together with

the demobilization of the armies will bring them down. The farm tractor is an agency which will have an important effect, especially in the opening of new lands, and there are numerous influences at work. But when farm products come down, so that the farmer is feeding the industrial population at lower prices, he will expect that the industrial products which he buys will also come down. It will be unfair to him if they do not, and if they should not do so promptly there will be a renewal of the movement away from the farm and into the town industries until the equilibrium is restored by natural forces.

Of course it is to be hoped that in these readjustments all parties will gain something, and that will be the case if they all improve their methods and are loyal and fair to each other as partners should be. They are all members of the productive organization, exchanging services with each other, and if they all increase in efficiency, they will all find their labors bringing them larger returns. And no class can increase its net earnings in any other way without reducing the share of the others.

Prices of material and labor are of paramount importance to the building trades and opinions vary greatly as to the probability of a decline in wages and material. According to a recent commerce report to this Government by Mr. C. W. A. Veditz, commercial attache at Paris, there is no drop to be expected in

prices in the near future. Building material market conditions are no better in European countries than here, and high prices will be maintained until supply meets the demand. The increased price for stone and sand, raw materials extracted from the soil, is, in Mr. Veditz's opinion, due to the increased cost of labor and of fodder for traction animals. As the demand for labor will be urgent after the war, high wages will be maintained. Increased prices on hay and oats, which has a direct influence upon local transportation, cannot be expected to decline for some time. Since the causes for high prices of materials and labor seem to be here for some time to come, it is reasonable to expect these high prices to continue.

On the other hand, Clarence R. Ward, architect, gives a more optimistic view of the situation in the *Architect and Engineer*. Mr. Ward says:

"War profiteering is over, or nearly so. In spite of more or less successful efforts to prevent it, it has existed, due partially to 'combination' of producers and partly to circumstances.

"There are three great business fundamentals—competition, supply and demand. These fundamentals have worked for the past four years principally for the benefit of the producers. They should now begin to operate for the benefit of the consumer.

"I am optimistic enough to believe that this new condition will benefit building

operations at a much earlier date than is generally expected.

"The cessation of war activities will release upon the market vast quantities of building materials, as well as machinery for their manufacture. To this condition add the release of vast numbers of artisans and laboring people of all classes and men coming back from the service. This will produce a spirit of competition which does not now exist. In fact, it will be a healthy stimulus to the morale of producers and working people and will result in greater productiveness, even though the present wage scale should be maintained.

"Such conditions should shortly tend materially to reduce the cost of building construction. In turn this should prove interesting to investors in real estate and buildings—men who have not recently been able to figure a reasonable return on building investments owing to present high costs.

"A very large amount of necessary building must be done in this country before the readjustment of affairs in foreign countries stimulates the reconstruction of what has been destroyed.

"As the world will look to the United States to furnish a very considerable proportion of materials necessary to rehabilitate regions devastated by war, it therefore behooves the investor here to get busy immediately. At least he should have his plans ready, thus enabling him to strike while the iron is hot."

There is, however, one outstanding feature of the situation which overbalances all other considerations. A big building era is here! Whether prices fall or rise; whether labor is scarce or plentiful, building must go on, to fill the very great deficiency existing now and due, of course, to the necessary restrictions put upon building during the war. Houses must be built to care for the several million young men who will return from the demobilized army.

Public work, postponed on account of the war, will now be put under way. Industrial buildings, held up for war work, are indispensable and must be supplied; banks, whose officers have been conservative about making alterations and additions due to expense of building, will now find improvements must go forward. Everything points to a great boom in the building world.

**A** FEDERAL Town Planning Bureau, whose purpose would be not only to finance, but to provide for and supervise the building of more beautiful communities in the future, was suggested last week, at a meeting in the Philadelphia City Club of town planners, labor leaders, civic work-

ers, architects, housing authorities and real estate operators from all parts of the country.

Lawson Purdy, a noted authority on taxation; J. Horace McFarland, president of the American Civic Association; Frederick Law Olmsted, considered America's foremost landscape gardener; Robert W. DeForrest, president of the National Housing Association, and Henry Sterling, representing Samuel Gompers, president of the American Federation of Labor, were among those present.

Their idea in meeting here was to take the initial step in making American cities better places in which to live and to improve the living conditions generally of "Mr. and Mrs. Average American."

Two resolutions were adopted. The first was "That there should be a Federal agency which should cover industrial housing, town planning, and community planning in the broad sense of dealing with the entire physical environment of the inhabitants." It was moved that a committee be appointed to obtain the co-operation of national civic organizations in drafting a bill to create such a bureau either in the Department of Labor or the Department of the Interior.

The second resolution was aimed at the Senate resolutions which provides for the stopping of work on all building projects unless they are seventy-five per cent. completed. It was voted to request the chairman, Mr. Purdy, to appoint a committee to go before the House of Representatives' Buildings and Grounds Committee next week and oppose the passage of this measure which, they contend, would seriously hamper building operations now when they are most needed.

The meeting was held at the suggestion of the American Civic Association. Three members of the Labor Department's Commission on Living Conditions Among Industrial Workers, took a prominent part in the deliberations. They were John A. Voll, a labor official; John Richards, chairman of the Commission, and Mr. McFarland, of the American Civic Association.

Others present were Charles Moore, of Detroit, president of the National Commission of Fine Arts; John M. Glenn, treasurer of the Russell Sage Foundation; John Ihlder, secretary of the Philadelphia Housing Commission; J. D. Leland, vice-president of the U. S. Housing Corporation, Department of Labor; Mrs. Edward W. Biddle, Philadelphia, president of the Civic Club; Frederick L. Ackerman, Emergency Fleet Corporation; Edward T. Devine, of New York; Andrew Wright Crawford, secretary of the Philadelphia Art Jury; Dr.

Teix Adler, of New York, and Thomas Shallcross, Jr., Philadelphia.

A majority of the town planners remained over for a meeting in the City Club at which tentative plans were discussed for improving the living conditions for the employed classes. Judge J. Willis Martin was chairman. An address was made by Chairman Richards, of the Commission on Living Conditions among Industrial Workers.

#### A THRIFT SUGGESTION.

ANDREW H. HEPBURN, ARCHITECT.

Most of us realize that the cost of a house is in direct ratio to its size. In an inexpensive house, which will give a family what every family has a right to demand—convenient, comfortable and attractive surroundings at low rent—it is vitally necessary to eliminate all waste space. I contend that, for a low rent house, a separate dining room is not only unnecessary, but is an absolute disadvantage. I believe that this fact would be appreciated by tenants if the proper means of presenting alternatives were adopted.

First, we must consider the elephantine dining room "set" of furniture. Bought because of a custom established by those who sell such things, it has become necessary to build a room expressly to hold it, a room usually not large enough for the furniture and the family at the same time, but the room, nevertheless, is there and the furniture is there. That which causes an increase in size and therefore in cost of the house must, of course, increase the rent.

Would it not be better to supply inexpensive but attractive and suitable furniture for a room which could combine the purposes of both living and dining room; gate-leg tables, for example, which could be set aside when not in use, a sideboard like the old one in the kitchen in Mount Vernon; the possibilities are infinite.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building magazine this side of Manhattan Island.

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Garage**, 925 North Sixty-fourth street, Philadelphia, \$1,000. Architect, private plans. Owners, Moss & Taylor, Fifty-eighth and Girard avenue, Philadelphia. Stone, 1 story, 18x21 feet, slag roof, cement floor. Owners will build.

**Factory (alts.)**, northwest corner of Oxford and Howard streets, \$1,000. Architect, private plans. Owners, Valkone Dye and Finishing Co., on premises. Brick, general interior alterations. Owners will build.

**Convenience Station**, Juniata Park, K and Cayuga streets, \$15,000. Architect, Joseph A. Roletter, City Hall, Philadelphia. Owners, City of Philadelphia, Department of Public Property, City Hall. Brick foundations, hollow tile and stucco, 2 stories, 52x17 feet, slate roof (louvres), tile floors and walls, electric lighting, hot water heating, artesian well, mill work, cement work, plumbing. Plans about completed. Owners will be ready for bids in about one month.

**Residence**, Chestnut Hill, Philadelphia, \$20,000. Architect, Charles Barton Keen, Bailey Building, Philadelphia. Owner's name withheld. Stone, 2½ stories. Preliminary plans in progress. Too early for details.

**Store and Dwelling (alt. and add.)**, 745 S. Second street, Philadelphia. Architect, J. Ethan Fieldstein, Penfield Building, Philadelphia. Owner, Mrs. Jennie Goldsmith, on premises. Brick, 3 stories, 19x100 feet, slag roof, stone foundations, steam heating, electric lighting, tile and marble work, hardwood, maple and cement floors, metal ceilings. Plans completed. Ready for bids.

**Bank Building (add.)**, Front and Norris streets, Philadelphia. Architect, Paul A. Davis, 3rd, 1713 Sansom street, Philadelphia. Owners, the Ninth National Bank, Ira W. Barnes, President, on premises. Brick, marble and terra cotta, 1 story, mezzanine floor and storage floor, interior marble work, bronze work, reinforced concrete, cabinet work, steel shutters, iron grilles, ornamental plastering, rolled steel skylights, indirect system of steam heating, metal lath, hollow tile, plumbing, electric lighting, area grilles, mahogany wainscoting, reinforced concrete and slag or composition roof. Plans about completed. Will be ready for bids March 1st.

**Manufacturing Building (ad.)**, Sixty-third street, north of Woodland avenue. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner's name withheld. Brick, stone foundations, 1 story, irregular size, size of building completed 114x112x160 feet, slag roof, hot water heating, gas lighting, cement and pine floors, hollow tile, metal lath, hollow metal sash and skylights, roof ventilators. Plans in progress. Will be ready for bids in about ten days.

**Hospital (alts.)**, Allegheny avenue and Cedar street, Philadelphia. Architect, private plans. Owners, Northeastern Hospital, on premises. Brick and concrete, carpentry. Owners taking bids (revised), due as soon as possible.

**sible**. John M. Yardley, 1716 Sansom street; Robert E. Lamb Co., 843 North Nineteenth street; F. B. Davis, 240 North Sixteenth street, are figuring.

**Department Store**, 925-27 Market street, Philadelphia, \$250,000. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, L. W. Hirsch Co., 923 Market street, Philadelphia. Extensive remodeling of building, 5 stories and basement, 40x200 feet, carpentry, cabinet work, steam heating, electric lighting, marble and terrazzo work, hollow metal sash, kalamein doors, metal bulks, fire towers, iron stairs, ornamental iron work, tile, hardwood and maple floors, metal lath, 3 elevators, safety treads, roof ventilators, waterproofing, dampproofing. Plans completed. Architect ready for bids.

**Dwelling (alts. and add.) to Store and Apartments**, Fifty-second and Spruce streets. Architect, E. Allen Wilson, 1208 Chestnut st., Philadelphia. Owner's name withheld. Brick, 2 stories, 18 feet 10 inchesx91 feet, slag roof, hardwood floors, hot water heating, electric lighting, tile work, hollow metal skylight, metal bulks, metal ceiling. Plans in progress. Will be ready for bids in a week.

**Marine Barracks (alt. and add.)**, Spec. 3514, Fort Mifflin, Pa. Architect, private plans. Owners, U. S. Government, care of C. W. Parks, Chief, Bureau of Yards and Docks, Navy Department, Washington, D. C. Brick porch, interior alterations, tin roof. Low bidder, John M. Yardley, 1716 Sansom street, \$9,193.

**Bath House**, 977-79 North Seventh street, Philadelphia. Architect, Reuben Beard, 2349 North Woodstock street, Philadelphia. Owner, Samuel Bershad, 975 North Seventh street. Brick, concrete, terra cotta and tile, 3 stories and basement, 32x82 feet, slag roof, concrete

and tile floors, metal walls and ceilings, fire tower, wire work, enameled brick (plumbing, heating and lighting reserved by owner). Plans about completed. Owner will be ready for bids in about ten days.

**Residences (31)**, Northeast Boulevard, Philadelphia. Architect, Reuben Beard, 2349 N. Woodstock street, Philadelphia. Owners, Eastern Development Co., care of architect. Brick, 2 stories, 16x60 feet, tapestry brick, slag and tin roof, stone foundations, hot water heating, electric lighting, tile work, hardwood floors, enclosed porches, glazing. Plans in progress. Architect will be ready for bids in about three weeks.

**Water Tower, Etc.**, Spec. 3682, Twenty-fourth and Gray's Ferry Road, Philadelphia. Engineer, private plans. Owners, U. S. Government, care of Bureau of Yards and Docks, Washington, D. C. Owners taking bids. Chas. Gilpin, Harrison Building; Thos. C. Trafford, 1613 Sansom street; John M. Yardley, 1713 Sansom street, and Monaghan & Losse, 3016 Chestnut street, Philadelphia, will figure.

**Emergency Hospital Building**, Spec. 3687, Twenty-fourth and Gray's Ferry Road, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, Navy Department, Washington, D. C. Brick, various sizes. Owners taking bids. Melody & Keating, 1322 Race street; Irwin & Leighton, 126 North Twelfth street; Wm. R. Dougherty, 1610 Sansom street; Wark & Co., 1737 Filbert street, will figure.

**Store and Dwelling**, 704 South street, Philadelphia. Architect, Reuben Beard, 2349 N. Woodstock street, Philadelphia. Owner, J. Beifeld, on premises. Brick, 3 stories, 20x72 feet, slag roof, stone foundations, hot water heating, combination lighting, tile and marble work, flush bulk, metal ceiling. Architect will be ready for bids in two weeks.

# No Standing Room For a Pessimist

The Priorities Division of the War Industries Board is to be congratulated upon its quick action in removing (effective on November 22) all restrictions affecting general business.

Are you now organized or are you preparing to organize the personnel of your enterprise so that you can secure your share of the volume of business that will be transacted in the United States during 1919?

There is no doubt that all of the labor available throughout the United States will be employed at good wages. This automatically stabilizes business.

The chart below speaks for itself and shows how materially immigration increased our labor supply from 1902 to 1914. It also brings out forcibly the yearly loss to our labor supply that we have had to contend with since 1914, and it is reasonable to suppose that no European country for some years will permit any large amount of emigration.

We still have some four million men in the service of the Army and Navy, for whom we must produce food and clothing. Unquestionably, it will be a long period of time before more than two and a half million of these men will be released to resume productive occupations.

The quantity of food and other supplies which we furnished the European countries prior to 1914 was small compared with what it is now our duty to provide.

A great big volume of business will be transacted throughout the United States during 1919 and the years to come. To take care of this we are confident that labor will quickly return to peace-time occupations and that there will be an extensive use of modern machinery in every line of endeavor.

C. Drawings and specifications may be obtained at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## HOUSING AFTER THE WAR

By LAWRENCE VEILLER, *Secretary of the National Housing Association.*

**A**LL of the housing problems that we had with us before the war began, we have with us now, that the war is over. The problem of the city slum still faces us. Perhaps, when we contemplate the significant facts of physical unfitness of the youth of the country disclosed through the war, when we reflect upon the fact that from 66 to 70 per cent. of our youth of draft age, 21 years to 31 years, were found ineligible for military service because of physical defects, the country as a whole may come to the conclusion that we have paid dear for our slums.

No matter what else it does, the country must set itself resolutely to make the slum a thing of the past.

We may even have a new national slogan in "Slumless America." To achieve this, however, means that the abolition

of the slum must become a national issue politically. Housing has been a political issue in Europe for nearly a generation; there is no reason why political battles shouldn't be fought here on similar questions. They are fraught with more consequence to the nation than the tariff, the liquor question or bimetallism. When this happens, however, we shall need to have a national housing program as well as a national housing policy.

The vault, that sink of iniquity and relic of barbarism, which still exists today by the hundreds of thousands throughout the large and small cities of the country must be banished forever. The dark room, breeder of tuberculosis and other infections, must be outlawed, not merely in the tenement, but in the cottage as well.

Congestion, that evil of great cities, which as yet has only begun to show itself here and there throughout the land, must be headed off. Room overcrowding and its attendant peril, the lodger evil, must be resolutely dealt with. Before the war, it was a menace to our national welfare. The war has intensified the evil. Unless dealt with effectively, it will ultimately threaten our national existence.

Acceptance of these statements implies that which will not be so readily agreed to; the enactment of a National Housing Law. To those who know with what difficulty housing laws have been secured in a few States and cities, after what laborious uphill battles against adverse interests, this will indeed sound like the millennium. But if the slum is to go—if indeed merely future slums are to be prevented from developing, this is essential.

And what of the slums that are already here? Will these be wiped out? I venture to think so. We have tolerated them too long already. While we have been reluctant hitherto to follow the example of Europe and especially of Great Britain in embarking on vast reconstruction schemes, that is one of the things the war will have taught us. We are beginning to realize even now that it is less costly in the long run for the State to spend vast sums in wiping out insanitary areas than in paying for them directly in poverty, disease and crime.

All these are problems we had with us before the war.

We face to a large extent the same problems that England faces. To some extent, but only slightly, what France faces; for, neither we nor England have been invaded. We have no devastated areas to reconstruct, no vast populations to rehouse.

All three countries, however, have to deal with the problem of meeting a vast shortage of houses. The building of houses in all three countries has practically ceased since the war began.

England, according to conservative estimates made recently, needs a *million new houses*. And during the next ten years, it is estimated, will need two million houses. Up to the time of the war the speculative builder had provided most of England's new housing. For

**We have pebbles all sizes. Cost less than what you are using. DAVID  
FRANCE CO., Tasket Street Wharf, Delaware River, Philadelphia.**

ten years before the war, however, there had been a very serious falling off in production.

In the forty largest cities in England and Wales, for example, the production of new houses decreased from 32,000 a year in 1904 to 12,000 a year in 1914. At the same time the average yearly increase in population in those cities from 1901 to 1911 was 96,896; and from 1911 to 1914, the three years before the war, was 129,028, while the average number of new houses built per year in that time was less than 14,000.

A variety of reasons have been assigned to account for this situation; the high cost of building materials, the inability of the workers to pay an economic rent, and especially the Finance Act of 1909, which many observers believe put a serious check on private enterprise.

The war with its prohibition of building, except for the most urgent needs, put the finishing touch to the situation.

Where are the one million houses that England needs today to come from—or the two million that it is estimated she will need in the next ten years?

Can the speculative builder who failed to meet England's needs ten years before the war be relied upon to meet her needs today? It seems hardly likely. Every thing is against it. The rate of interest on sound investments in England has risen from  $3\frac{1}{2}$  to  $5\frac{1}{2}$  per cent.; the cost of building materials has gone up from 30 to 50 per cent. since the war.

This situation has given great concern to thoughtful observers in England.

Ewart G. Culpin, Secretary of the Garden Cities and Town Planning Association of England, as long ago as October, 1916, said in reference to an "After-the-War Housing Policy":

"It seems to be agreed that the housing of the future will not be undertaken by private individuals unless there are very drastic alterations in legislation both as to taxation and financial assistance, and it has been taken for granted that the only alternative to this is housing by local authorities. . . . It is not everybody who is agreed upon the desirability of municipal housing, and, whatever may be our opinions, we have to face this fact and to realize that municipal housing has been on many occasions—and probably will be on many more occasions—the subject of the rough and tumble of municipal elections."

Even the operative builders themselves realize that private enterprise unaided is unequal to the situation. In the Report of the National Conference on Housing After the War, already referred to, they say:

## Water Supply Systems

DESIGNED AND INSTALLED

Sewage disposal systems for country homes, institutions, etc.

**HARRISON, MERTZ & EMLIN, Inc.**

Engineering and Construction

Commercial Trust Building

PHILADELPHIA

"The concern of this conference is to enable housing accommodations to be provided after the war. As the great volume of private capital ordinarily available cannot be relied upon until the confidence of investors has been restored, the State will have to come to the assistance of private enterprise and other agencies who will undertake this work."

In a striking presentation of the claims of the Garden City, published under the title "New Towns After the War," it is said:

"During the war the building of houses, except in a few munition areas, practically stopped, and overcrowding has reached an intolerable point. Everyone recognizes that the moment the war is over the building industry must be set energetically at work to make up the shortage. Everyone agrees also that in the organization and financing of these housing activities the State will be called upon to take a decisive part."

Thus, we have the testimony of three widely separate groups—the public utility societies, the operative builders and the advocate of Garden Cities—that the State must play an important part in whatever housing is done after the war.

England, fortunately, is alert to the situation, and in thorough British fashion has thrashed out, in anticipation of her hour of need, the questions that need to be considered, so that when the time for action comes she may be fully prepared. The British Labor Party in its Reconstruction Program had housing as one of its chief planks. It says:

"In order to prepare for the possibility of there being any unemployment, either in the course of demobilization or in the first years of peace, it is essential that the Government should make all necessary preparations for putting instantly in hand, directly or through the local authorities, such urgently needed public works as the rehousing of the population alike in rural districts, mining villages and town slums, to the extent possibly, of a million new cottages and an outlay of three hundred million sterling (about \$1,500,000,000)."

Thus, we find on all sides and in every quarter a recognition of the need and an agreement by the most diverse ele-

ments that upon the shoulders of the State the chief responsibility rests. Naturally, different views are held by different interests as to the methods by which the desired ends are to be achieved. The operative builders hold that it should be done through Government subvention to private enterprise; the public utility societies that it should be done through organizations such as theirs; another believe that it should be done by the local or municipal authorities; and others believe it should be done directly by the Government.

One of the most interesting proposals that has been put forth is that presented in the book "New Towns After the War," already referred to, published anonymously during the past winter and written evidently by some one thoroughly familiar with town-planning and the Garden City movement.

The writer advocates the establishment by the Government after the war of 100 new towns of the Garden City type. "Manufacturers interested in the efficiency of British industry, workingmen and women wanting better surroundings for their life and work, agriculturists seeking a reconstruction of the rural system, . . . all who have a regard for the bodily, social and esthetic health of the nation" are appealed to for support of this scheme.

It is a far-reaching proposal on a colossal scale, in direct opposition to many of the other schemes proposed. Of these, the writer says:

"The after-war housing schemes foreshadowed by the Local Government Board, and even the maximum programmes of the propagandist housing and town-planning societies, promise merely a speeding up of the present essentially unsound development. There is no thought of national design. If all the proposals are carried out we shall have many more Garden Suburbs placed on the fringe of great cities, and some subsidized cottage building in the villages, but no attempt to treat the industrial and psychological causes of urban overgrowth and rural decay. None of these schemes goes to the root of the matter. . . . They will perpetuate and even extend the fundamental evils of our

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

urban system and do nothing to arrest the decline of the small towns."

Even in England, where the Garden City idea is far better understood than it is in America, it is still imperfectly apprehended and the Garden City is often confused in the popular mind with the Garden Suburb and the Garden Village. As expressed in "New Towns After the War," it is essential "in order to protect the vital feature of limitation (of size), the town must be encircled by a belt of open land, wide enough to possess a distinctively rural character and to permit of farming on the scale proper to the district. And in order to keep other towns at arms' length, and to maintain direct contact between urban and rural life, this belt of land must be permanently reserved for agriculture." Limitation of size considered so essential is expressed by a maximum population of 50,000, which "with an average density of 25 persons to the acre, would require an urban area of about 2,000 acres."

This is the scheme as stated. Even in these days of vast projects it takes one's breath away. One hundred new towns, with a population of five million people to be built where to-day there is nothing but open country and at a cost of possibly twenty-five hundred million dollars, each town not only to be a complete entity in itself, self-contained and sustaining within its own confines, its own population, supplied with all public utilities, water, gas, sewers, light, streets, pavements, shops, factories, amusements—but, in addition each town to be a model of what every town ought to be—with its rural belt and its agricultural industries and population—and all of these towns to be so strategically located as to serve the needs of all of England.

The English plans are by no means limited to this far-reaching scheme. Thomas Mawson, England's distinguished town planner, over a year ago in his book, "An Imperial Obligation," suggested the establishment of numerous "Heroes' Villages," along Garden City lines, in which the vast army of wounded and disabled soldiers who have given their all for their country might find new occupations suited to their changed conditions under such surroundings as would tend to make for their welfare and happiness.

Of the returned disabled soldier he says:

"He shall not stand in the mean courts of a large town such as that into which he will inevitably drift if we do not will it otherwise; where life is drab and drear and even the light of the sun is obscured by clouds of smoke, so that green things and wild living things in which the heart

of every man who is a man delights, have taken themselves elsewhere."

Nor is the Government any less alert to its obligations or responsibilities than are these disinterested observers and students of England's life. England for some time has had its Ministry of Reconstruction. Under it, 87 commissions and committees have been planning for rebuilding after the war. These are the questions that England is considering.

What of America? Has she at last learned the lesson of her unpreparedness? Or, will she repeat in this field of industrial welfare, the same mistakes she made in the field of war?

Are the conditions that we face here at all similar to those England faces? All thoughtful men, I think, will admit that they are very much the same.

We face a similar housing shortage; we face a similar increase in the cost of building; we face, too, the inability of many workers to pay an economic rent. Here, as in England, private enterprise had broken down at the advent of the war. To-day it is at a standstill. The financing of industrial housing schemes without Government aid is equitably difficult here, if not indeed impossible.

We face, undoubtedly, the necessity of building on a vast scale.

We, too, need to provide adequately and appropriately for our returned disabled soldiers, no longer able to compete with their civilian brothers not so handicapped, though we hope we shall not have the half-million England is said to have. Perhaps we, too, may build "Heroes' Villages" for them, along Garden City lines.

The war has taught us many things already. It will teach us many more. In one thing it has taught thrift to the most wasteful nation in the world. It has taught us a new respect for food. It has given a new significance to rural life.

With greater control will come less waste, greater efficiency. The establishment of Industrial Zones has already taught us the folly of manufacturing goods on the western coast to be hauled all across the continent to be sold on the eastern coast.

We are beginning to learn in a host of ways the value of cities intelligently planned. Not only is the Garden City coming into its own with town planning, but rural planning as well is beginning to be considered.

The war has brought much with it that we never looked for. In the recent words of our great leader, Theodore Roosevelt: "When we have closed the giant war, we must then prepare for the giant tasks of peace."—*The Architectural Record*.

## The Page "Ad"

"I like the clean, outstanding appeal of the page ad," said an advertiser recently," but I'll be frank to say that I've never been able to convince myself that it can be made to pay."

"Have you ever tried out a whole page?" he was asked.

No. He hadn't. But he knew what a page of space would cost, and he couldn't get away from a certain overhang of doubt that the additional results would prove commensurate with the extra outlay.

We mentioned Wanamaker, who uses a page a day regularly, varying this program now and then by making it two pages.

Oh, yes, of course. But then Wanamaker's case was quite different.

We asked him to point out "how" and "why."

The truth of the matter is that the page ad is just as much more effective than the small ad as the big show window is more effective than the small show window.

To be sure, in the case both of the ad and the window a whole lot necessarily depends on just what you put into them and how you dress it up.

It wouldn't be good business to buy a page of space in order to work off a string of poor sales-talk.

But, assuming that the sales-talk is "right" and the article it is designed to sell an article that has real merit and utility, the page ad is actually the short cut to results.

The first object of any ad is to get the attention of the reader.

Nothing does this more effectually than the page announcement.

We have in mind an advertiser who slips a page space into his regular schedule now and then just as an interest-reviver.

He tells us it pays big.

Whether it would pay as handsomely in **your** case, we are not in a position to say.

Why not try it out?

The cost is not excessive.

Call Mr. L. S. DeLone.

USE  
*Ceil-Board*

**For Lining Bungalows, Damp Walls, Attics, Garages, Poultry Houses, Etc.**

Thoroughly established as the most economical material for interior lining. Artistic, quickly installed, durable and dependable, it is just what you are looking for. It has been called by many "The Board without a Peer." Ceil-Board's the real board.

**James E. Tague & Co.**

*Specialists in Factory and Jobbing Lumber*  
Lumber Yards Philadelphia Agency  
Northeast Corner 10th and Columbia Avenue  
Northwest Corner 19th and Cambria Street

**The Quality of "F-S" Products is acknowledged.**

"Ef-Es-Co" gives a dead-flat effect on wood and metal. It looks like enamel, flows well under the brush. Made in white and colors of best materials. You are sure of its quality when you specify it.

FELTON, SIBLEY & CO., Inc.

*Manufacturers of Colors, Paints and Varnishes since 1863*

136-140 N. 4th St., PHILADELPHIA

## No More Ashes To Lug

No clumsy pan to spill dust  
and dirt on the kitchen floor

### The Glenwood Ash Chute

solves the problem. It is located just  
beneath the grate and connected by a  
sheet iron pipe straight down through  
the kitchen floor to ash barrel in cel-  
lar. No part is in sight. Not a par-  
ticle of dust can escape. Just slide  
the damper once each day and drop  
the ashes directly into the ash barrel.

### The Dust-Tight Cover

to barrel is another entirely new  
Glenwood Idea and is very ingenious.  
This is only one of the splendid im-  
provements of the new plain

### Cabinet Glenwood

the Range without ornamentation or fancy  
nickel, "The Mission Style" Glenwood. Every  
essential refined and improved upon. This  
Range can be had with the latest and most  
improved Elevated or End Gas Range attach-  
ments. It can be furnished with fire box at  
either right or left of oven as ordered. Our  
handsome booklet tells all about it.

## As The Editor Sees It

**N**INETEEN-EIGHTEEN has distinguished itself by outclassing all previous low records for construction work. When the total value of building permits for Philadelphia in 1917 reached the low water mark of \$33,961,120 an almost unbeatable record was established. Amazing, indeed, is the decrease of \$19,563,810 during the past year; the total value of building in 1918 is only \$15,452,670.

These figures, however, do not include the \$6,000,000 spent by the United States Government for the houses erected in the Thirty-ninth and Fortieth Wards, nor the millions of dollars spent by the Government for building erected at the Navy Yard arsenals and elsewhere in Philadelphia and vicinity. If the cost of the Government buildings were added to the figures issued by the Bureau of Building Inspection, 1918 would be the best instead of the worst in the last ten years.

Total operations of all kinds during 1918 were 5,950 compared with 8,977 in 1917. In the past year there were erected only 884 two-story dwellings, at an estimated cost of \$2,885,710 against 2,386 valued at \$6,328,020 in 1917. Three-story dwelling only 62, at a cost of \$403,000 compared with 297 valued at \$1,935,990 in the previous year.

A classified and tabulated statistical review of structural activities during 1918 is published on another page of this issue.

**D**ESPITE the discouraging report for 1918, the outlook is much more cheerful than that of a year ago. Then our minds were steeled and prepared for a possible three or four year conflict, with the necessary drastic building restrictions, and, loyally, we had made up our minds to accept the inevitable and stand by the Government.

Now we look forward to an era of big building; all restrictions are down and the Government wishes us God-speed and says "Go ahead."

"The announcement made at the monthly luncheon of the Philadelphia Operative Builders' Association that its members have pledged themselves to put on the market 10,000 new houses in Philadelphia before next summer, forecasts the greatest building boom in the residential sections of Philadelphia, says *Realty*, that the city has known for several years. Seven or eight years ago a yearly average of from 8,000 to 10,000 new houses in Philadelphia was the customary report of the Bureau of Building Inspection. Indeed, house building proceeded on such a scale at that time, particularly in West Philadelphia, that it was overdone. The market became glutted with houses, which, it was predicted, would require several years to absorb. Rows of dwellings in every section in consequence were taken over by the mortgages, who were for the most part trust companies, builders who had been active in developing large sections of the city became timid

about undertaking new operations and trust companies, while not actually refusing loans for new dwellings, surrounded their loans with conditions which made it virtually prohibitive for the builder unless he were willing to undertake the greater part of the risk himself.

"The building boom, in short, came to an end, and while there was nothing which could be described as a slump in prices, there were too many vacant houses and too many selling at figures so near their actual cost that many builders and some of the trust companies lost money. During the year or so preceding the outbreak of the European war, in July, 1914, and during the first two years of the war, these surplus houses were gradually absorbed. The normal requirement of the city was sure, in the course of a few years, to take care of this surplus. At the entrance of the United States into the war, in March, 1917, there were comparatively few of these surplus dwellings unsold or untenanted, and had it not been for the embargo placed almost immediately after by the Government on building material, and the withdrawal of much foreign labor hitherto employed largely in building work, the operative builders would have been ready to resume work, not, it is true, on the same scale as in the boom years, but on a steadily increasing yearly scale of production.

"At this crisis, while builders were debarred by the embargo on material from

beginning work on any new houses, great industrial plants employing thousands of men from other cities in the making of munitions and in other war work, began to spring up around Philadelphia. The first demand from these thousands of workmen, which some have estimated at as high a figure as 150,000 in Philadelphia and nearby points, was for a place to live. A large proportion of them were married men with families, to whom dwellings were essential. The demand for houses began about July, 1917, and within about two months from that time there were virtually no vacant houses in any section of the city. The demand principally from the newcomers, was for houses to rent, as many of them came from sections of the country where home owning is not such a well-established habit as it is in Philadelphia. Vacant houses disappeared from brokers' lists so rapidly that within a few weeks after the rush began there were actually no vacant houses in Philadelphia, while the number of vacancies in the year or so preceding the war had been estimated by some brokers to be as high as 20,000.

"The scramble for houses, for in many sections it was little better than that, sent rents and prices mounting upward more rapidly than any real estate broker or property owner had ever expected to witness. Thousands of home owners, tempted by high prices, rented out vacant rooms, and a "doubling-up" process began all over the city which threatened to lead to great congestion. Thousands of houses were offered for sale and quickly taken up at prices greatly in advance of those their owners were willing to take a year or so previous.

There was some profiteering in dwellings, not so much, however, as has been generally believed. So great was the demand for houses that it was almost impossible to eliminate speculators from a market so active, and, as the price of almost all other necessities and commodities took a big jump after war was on, why, it was argued, should dwellings be exempted from the law of supply and demand that governed other businesses? The speculative movement died out, however, after a little while, and prospective buyers of dwellings slowly came to a realization of the fact that cheap houses or houses as cheap as they were in pre-war times had passed out of the market for several years at least.

"The intention of the operative builders to resume work next spring on a large scale follows immediately on the recent removal of the embargo on material, but it does not mean that houses will be much cheaper, though it is believed there will be some recession from present figures. Building material has been released, it is

true, the builders say, and that will enable them to supply the pressing need for more houses, but the cost of building material and of almost everything that enters into the finished dwelling is not expected to show any marked drop in price till the labor market has returned to normal standards, which will certainly not be till the armies in Europe and at camps have been disbanded and their members have returned to the trades of peace.

"The 10,000 new houses which the builders promise to complete will probably be distributed all over the city. West Philadelphia will, no doubt, get its share, but this section of the city, particularly south of Market street, has been so thoroughly built up in the last ten years that there is little vacant ground in South of Woodland avenue, in the Fortieth Ward, which is advancing rapidly in price. A large part of West Philadelphia's quota of new houses will probably be located in this section.

"New houses in South Philadelphia will probably be located close to the League Island boulevard, and in the western end of the Thirty-sixth and Forty-eighth Wards. There are several thousands acres of vacant ground south of Oregon avenue, but its development as a site for dwellings will be necessarily slow, as much of it is below grade, requiring a fill, in many places, of from ten to fifteen feet. One builder and operator in this section owns ground along Oregon avenue, the old Stocker tract, which he purchased several years ago, and which is big enough to accommodate 2,000 houses. In the northern section of the city the greatest house-building activity will undoubtedly be along the Northeast Boulevard, where there are thousands of acres waiting for development. It would not be surprising to see half of the new houses planned for Philadelphia built in this territory next spring, though much of the development here will depend on the prospects of an early completion of the Broad street subway."

\* \* \*

**W**HEREAS a few months ago patriotism and expediency put an end to practically all construction work except that for Government purposes, the resumption of both public and private construction is now urged as a mean of restoring normal conditions in the country. Secretary of Labor William B. Wilson has announced the inauguration of a nation-wide building campaign. Mr. Wilson gives six reasons for his support of the campaign. They are:

"1. Building is an industry which is not inflated, and which has not been put on an artificial basis by the war.

"2. Building employs all classes of labor, common labor, stone masons, brick

layers, carpenters, plumbers, steam-fitters, coppersmiths, and many other trades.

"3. Building enables most of the cost to get back into the wage workers' pockets. Therefore, it makes little difference to the worker who builds if the cost of building should be 20 per cent. less a few years hence; for then, through idleness, his income would be correspondingly cut down.

"4. Building creates permanent wealth, increases the taxable property of the community, and is a form of wealth subject to little depreciation.

"5. Building makes for good citizenship, and it is the only safeguard against Bolshevism. As some one has asked, 'Did you ever see the red flag of anarchy flying over a man's own hearthstone?'

"6. Building can be maintained and regulated. We know just how many are being built, as permits must be secured by all. We can allot building to communities as one would allot quotas in a Liberty Loan campaign. The construction industry stands out almost alone in its ability to be regulated and stimulated."

Mr. Wilson continues:

"Deferred construction is really a part of our war debt. It should be one of the first accounts to be paid unless the country is to remain in a state of arrested development. Inasmuch as the building industry is regarded by many as the means of facilitating the general industrial transition from a war to a peace basis, it should have the encouragement of all interests. For ultimately all industries must suffer and prosper alike. In fact, my interest in stimulating construction is only due to my interest in every trade and in every citizen.

"Public construction will be helpful in mitigating conditions. While parks, highways and other public improvements add to the general welfare of a community, it is not of itself a sufficiently comprehensive program to solve the readjustment problem.

"Therefore, it is evident that the private as well as public construction must be resumed before the country returns to normal conditions. Next to placing private funds in Governmental securities, it is desirable that they be invested in enduring wealth like construction. The accumulated earnings of the citizens of the country should not be diverted into forms of wealth easily consumed and without earning power. Permanent investments of wealth will stabilize the moral and financial condition of the country as a whole, as well as benefit the individual investor and his dependents.

"The main reason why civil construction is held up is because the public has

Dwelling, 2101 Delancey street, \$1,000. Robt. Von Moschiszker (O), on premises. H. E. Grau (C), 1707 Sansom street. General repairs.

Boiler House, S. W. Cor. Frankford avenue and Nicetown lane, \$4,300. Edgewater Dyeing & Finishing Co. (O), on premises. James Warner (C), 240 North Sixteenth street. Alterations.

Stores, West Side of Broad, north of Snyder avenue, \$5,000. E. C. Kolb (O), N. W. Cor. Fifteenth and Snyder avenue. Brick, second story addition, 80x50 feet.

Dwelling, S. E. Cor. Fortieth and Aspen streets, \$1,800. Dr. Thos. Llewelly (O), 715 North Fortieth street. Frank K. Stahl (C), 2713 North Park avenue. Interior alterations.

2109 Market street, \$1,000. The Philadelphia Inquirer (O), on premises. Roydhouse-Arey Co. (C), 112 North Broad street. Strengthening floors.

Store and Dwelling, 617 Poplar street, \$2,000. Jacob Guzenberg (O), 822 North Seventh street. Benj. Israel (C), 432 Poplar street. Brick, 3 stories, 13½x26 feet, alterations and additions.

Sh.op, N. W. Cor. Thirty-sixth and Grays Ferry Road, \$3,800. D. B. Martin Co. (O), on premises. H. P. Friend (C), Norristown, Pa. (Add) Brick, 1 story, 33x67 feet, slag roof.

Store, 2043 East Cheltenham avenue, \$800. Wm. J. Magee (O), on premises. Chas. Johnson (C), 5701 Boyer street. Brick, 1 story, 20x20 feet, side addition.

Dwelling, 334 South Thirteenth street, \$1,000. S. M. Fisher (O), on premises. Conneen Const. So. (C), 1737 Filbert street. Iron, fire escape, fireproofing.

Tenement House, 1124 West Berks street, \$750. J. D. Flutka (O), 1859 North Twelfth street. Alterations.

Store and Dwelling, 928 North Marshall street, \$700. M. Groman (O), 931 North Twelfth street. B. Arrow (C), 992 North Seventh street. Flush bulk alterations.

Store and Dwelling, 914 South Twelfth street, \$400. Jos. De Guglielino (O), on premises. G. De Marco (C), 1224 Christian street. Flush bulk and alterations.

Dwelling, 5738 Pearl street, \$500. N. Rucho (O), on premises. N. Irracchine (C), 2227 Moore street. Brick, 2 stories, 11½x9½ feet.

Garage, 1709 Carpenter street, \$300. W. H. W. Cassell (O), 917 South Seventeenth street. M. H. Mores & Co. (C), 1834 Ellsworth street. Alterations.

Warehouse, 1721 Ranstead street, \$1,000. F. P. Mellon (O), 34 South Seventeenth street. Geo. C. Dougherty (C), 1725 Ludlow street. Interior alterations, new windows, maple floor, plastering.

Bank, N. E. Cor. Fifty-second and Market streets, \$500. Mary E. Eickhoff (O), 22 South Fifteenth street. John N. Gill & Co. (C), Otis Building. Concrete vault in basement.

Store, 1308 Chestnut street, \$25,000. George Miller (O), 1306 Chestnut street. F. L. Hoover & Sons (C), 1023 Cherry street. Alterations and new wrought.

Factory, N. W. Cor. Oxford and Howard streets, \$1,000. Valkone Dye Works (O), on premises. Brick, alterations.

Apartments, 1619 Green street, \$400. J. D. Reno (O), 1919 Green street. E. H. James (C), 1736 Fairmount avenue.

Store, 530 South Fifth street, \$600. H. Uram (O), 519 South street. B. Bornstein (C), 1510 North Franklin street. Flush bulk and alterations.

Store and Dwelling, 1931 North Thirty-first street, \$525. Solomon Morinsky (O), on premises. M. Lesitsky (C), 2547 North Thirtieth street. Alterations from dwelling to store and dwelling.

Alley Wall, American and Diamond streets, \$300. J. M. Scott & Co. (O), on premises. M. Morrison (C), 2322 North Howard street. Brick.

### AS THE EDITOR SEES IT.

(Continued from Page 30.)

been instinctively educated against it. Other factors which are retarding the recovery of the industry are the difficulty of obtaining capital, the uncertainty of the market as regards supply and distribution of capital and labor and the problems of price, supply and irregular and expensive transportation of building material.

"May we not overcome these difficulties, in a measure at least, and through a definite re-education, shape mass psychology throughout the country into a strong, fearless attitude which will favor public works, schools, hospitals and private construction of certain types, at least? The Government must go ahead with its building program and also the States, counties and cities. Such public work can be undertaken without loss, even with present high prices, because the value of property is dependent, not so much upon what it costs, as upon the cost of reproducing the same.

"The new attitude of the Government toward building and the work thus started must be given as much favorable publicity as the Government directed unfavorably toward construction during the war. A campaign to encourage home owning and home building has already been inaugurated by the Department of Labor, under the direction of Roger W.

Babson and Franklin T. Miller. A survey of community requirements should be made, based on statistics from building permits, and building quotas should be established for each section. In carrying out this campaign the active support of banks is essential in order to arrange for and encourage loans to home builders. May every one help!"

\* \* \*

**R**ESUMPTION of the normal activity in building is regarded by the Department of Labor as the first step in transition from a war to a peace basis. The war practically ended building of all sorts not connected with the Government's program, through restrictions on construction and movement of building material.

At this time, building of economically sound projects will benefit not only the building industry, but industry as a whole, and will smooth the pathway from war-time conditions to the normal. Moreover, building remains a permanent betterment to every community.

The pivotal nature of the building industry and the fact that building materials have shared less in the general inflation of commodity prices than almost anything else, make stimulation of building the most feasible means of aiding industry.

The Department of Labor does not look forward to any unemployment crisis, says Assistant Secretary of Labor, Louis F. Post. There is no reason why either business men or wage-earners should be apprehensive with regard to commercial stagnation. The war has on the whole increased the purchasing power of the masses and has created new markets. America must assist in the rebuilding of Europe, and avenues for foreign

trade hitherto closed to us are now open. Raw materials which were denied to private and non-essential industry during the war are now accessible to the manufacturers of America through their release by the War Industries Board. Credits which were similarly denied to private concerns because they were needed for Government use have also been released by the Capital Issues Committee. There is no reason for anyone to be alarmed over the future.

We must remember, however, that we have large numbers of men under arms who must be transferred to industry as rapidly as possible and that this number is many times larger than that which we have been accustomed to absorbing. Industries cannot be resumed over night. Consequently there will be for some months to come the necessity for providing some form of employment for our demobilized soldiers and war workers, pending the resumption of normal activities. There are two ways in which this can be done. One is through the continuance of the manufacture of munitions and other supplies designed primarily for war purposes which are now unnecessary by reason of the signing of the armistice. The Department is opposed to this course. It is simply a waste of intelligence, energy, and material. It is foolish to create work solely for the purpose of giving employment to someone. The alternative to this wasteful practice is to stimulate work which is valuable for peace time purposes. Many municipalities throughout the country, and many States as well, have during the war either abandoned or suspended considerable amounts of public improvements. The Federal Government itself has practically abandoned its building program for

the past two years. This accumulation of work should be undertaken at once as a means of providing buffer employment to carry us beyond the transition period and take up such unemployment slack as may result not so much from the inability of the industries to eventually absorb demobilized soldiers and war workers as to the rapidity with which they will be required to absorb them.

A new division has been created in the Department of Labor for the purpose of interesting the nation in public works and private construction. Secre-

tary Wilson announces that the new service will gather and distribute information that will enable private initiative to make the transition from a war to a peace basis without serious interruption, due to lack of data on which business judgment must depend.

A survey of business conditions will be made with a view to learning how labor and capital may be profitably employed during the critical period when factories are being made over for peace production and markets are being canvassed for future outputs.

The division which will carry on this work is now being organized by F. T. Miller, as a section of the Department's Information and Education Service, of which Roger W. Babson is chief. The new organization is called the Division of Public Works and Construction Development, and occupies the building at 16 Jackson Place.

The particular objective of the bureau's research will be to secure data for the use of the construction industry, but the material to be collected will be so varied that the information will be of value to industry generally. The facts made available will be of help to any community or investor in determining whether it is advisable to undertake public or private building at present. When circumstances unfavorable to construction are discovered an attempt may be made to correct them, but there will be

no stimulation of economically unsound enterprise. The findings of the bureau will be given the widest publicity.

The pivotal nature of the building industry is economic reconstruction and the general purpose of the work of this division are expressed in Secretary Wilson's statement:

"Building construction will help to provide employment for returning soldiers and for workmen dismissed from war industries. One of the largest sources of prospective employment is the building trade and its allied factory industries.

"In the case of private construction, a resumption of activity will also lessen the congestion of population, improve conditions affecting the public health and convert inactive property into active property—which supplies the means that enable communities to support the function of governments.

"During the war the nation practically concentrated all its efforts on the production of goods for immediate consumption—war materials, food, clothes. The failure to produce the normal quota of goods for future consumption has made these scarce and high priced, and as they are essential to further production they affect the cost of production and, consequently, the cost of living. Chief among such goods are building and other real estate improvements, including public works, as roads, bridges, etc. The scar-

city of buildings creates high rents.

The inquiry will be under the direction of business men of wide practical experience who are serving without pay. The actual investigation will be conducted by a group of economists and special agents supplied by the Department of Labor and other Government departments or lent by universities. The field will include the cost and supply of building materials, the amount of labor available and its cost, the values of land, prevailing rents, the supply of capital, the amount of construction held up by the war and the demand for building in all parts of the country.

Under the supervision of the economics section, five other sections will prepare information for publication by the means of the press, public speakers, posters and the medium of organized labor.

**A**CTIVITY of the construction industry at this time, according to F. T. Miller, Director of Division of Public Works and Construction Development, U. S. Department of Labor, is essential to the general welfare of the country. As Secretary McAdoo recently stated, in directing the Supervising Architect to resume public work, "the activity of the building industry will facilitate the transition of (general) industry from a war to a peace basis."

This is a question that goes beyond the interests of the construction industry. It is fundamental to our entire program of reconstruction and affects society as a whole. After all, reconstruction must be literal as well as metaphorical; the way to bring about reconstruction is to reconstruct.

Successful construction depends upon proper team-work between the employer and employee; therefore, the work undertaken by this Division falls under the activities of the Labor Department; and under those of the Information and Educational Service, which already possesses a nucleus of the necessary organization and important data.

Secretary Wilson's wish is that the Nation be interested in public and private construction. This wish cannot be carried out unless the work is based on facts.

Facts when verified and surveys when completed will be made known to the public and to the members of this great composite industry. This is a service of information and education.

The co-operation of other governmental departments the State Councils of Defense, etc., is assured. Evidently time

can be saved and correctness of viewpoint gained by such co-operation.

The following telegram from the Secretary of War, approved by the Secretary of Labor, was sent out under date of December 21, 1918, to 48 State Councils of National Defense and 4,000 County Councils of National Defense:

"Re-employment of discharged soldiers, sailors and war workers released from war industries is one of the most important tasks now before the country. We strongly urge that in sections where there is a surplus of labor all public improvement be advanced in order to absorb labor. We ask that you use all influence with State, county and municipal authorities to this end. Preliminary steps should be taken immediately in order that necessary authority may be secured in time for operations upon opening of construction season.

(Signed) NEWTON D. BAKER,

Secretary of War and Chairman of Council of National Defense."

Approved by:

Secretary of Labor."

The construction industry—a composite industry—is one of the Nation's largest. Its successful functioning is most necessary for the public welfare. It now needs and merits governmental support more than any other great industry, for the reason that it has necessarily been embargoed by the Government during the war.

The British Government, whose precedent in curtailing the building industry during the war was followed by our own Government, has already taken forethought in this matter.

Deferred building construction is one of the first portions of our war debt which must be met, for it provides facilities for paying the remaining portion of the war debt and also decreases the cost of living.

It is an economic waste to allow labor and materials to remain even temporarily in idleness, when they may in the meantime be put into wealth and tax-producing structures.

Money is not consumed in building operations, but passes from one hand to another, and still remains in the National banking system, yet leaves on its way a permanent evidence of wealth—such as a water-power, a highway, a railroad, a sewer or other necessity to the earning power of society.

A thrifty farmer reduces his luxuries in order to improve his land and his buildings; a thrifty Nation keeps up its construction program.

Public credit is ample for all public works. The money used circulates through the State ten times in the twelve months and largely remains in the State, while the structure endures for the benefit of society.

Since the beginning of the European War, construction has decreased, until now it is quite at a standstill. There is, therefore, an accumulated need for building. The shortage of construction is indicated by high rents.

The increased cost of building materials is only about half that of other commodities.

The increased cost of building materials is offset in some localities by decreased cost of land.

Investment in building has always been considered the safest investment for the individual and his dependents.

The country is probably a full year behind in its civil construction program, amounting to at least three billion dollars. This amount must be caught up and normal building continued; a condition of permanently arrested development of the country is inconceivable.

At this time of quiet in the industry, the foresighted who have need for building will naturally receive better service than when the rush comes on.

There is a growing understanding between the building employer and the employee of their co-operative relationship, and together they have every incentive for rendering the public efficient service.

It remains for this Division to obtain a variety of data in addition to those which it already has, in order, if possible, to point out what kinds of projects can be most prudently undertaken in the various sections of the country.

Co-operation of the architectural and engineering professions, of the practical contractors, and of the two-hundred-odd National associations of manufacturers, etc., in the practical application of these facts, may be assumed as assured.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

### An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

### ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates. Lawn Fences. Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

### Self-Furring Lath Insures a Perfect "Key"

Kno Fur (Self-furring) Expanded Metal Lath is a Metal fabric of diamond shaped meshes with integral furring ribs formed in the sheets.

These 1/2-inch deep ribs act as furring strips, but being open meshes permit the plaster to flow around every single strand and completely imbed the entire rib.

## As The Editor Sees It

WITH the cessation of the need for munitions and other war supplies comes the release of a great many men who were employed in the manufacture of these products during the war. Every day soldiers are returning to don civilian clothes and take up again the tasks of peace. Inevitably we are inclined to be apprehensive of what will happen as these men are daily thrown out of work. The answer to the problem is to be found in the construction industry and "that the entire country," says the *Architect and Engineer* of California, is about to enter upon an unprecedented era of building activity is indicated in reports from the big cities of the East and on the Pacific Coast. It is not generally realized that the building industry of this country which was so seriously disorganized by the War, represents an investment of something over \$2,000,000,000, while its annual product in normal times is conservatively estimated at more than \$3,000,000,000. Employment is given in ordinary times to a million and a half skilled and unskilled workmen. There are in normal times three thousand architects engaged in design and superintendence in the United States.

"There is no question about the future prosperity of this great industry. The demand for new building is here. Every architect, every engineer, actively practicing their professions, can tell of the many projects that have been reluc-

tantly postponed because, in the first place, of patriotic consideration, and second, because of the restrictions that have been imposed by the Government. This construction work includes a great and increasing volume of public work for which the money is actually in hand. Now that the ban has been removed, these projects can be carried out unhampered.

"Of course, it is entirely reasonable to believe that for the first few weeks there will be some hesitation on the part of owners, who may think that by waiting awhile they can get better prices on materials and labor. But material and labor prices will quickly settle upon a fairly normal basis. The period of readjustment ought not to take more than a few weeks, even though present priority restrictions are removed. It does not seem at all probable that with the market swept clean of materials, and a big construction program awaiting just around the corner, there is any good reason to think that material prices will be reduced very considerably below the present point for a long time to come—if ever. Surely, labor will not easily relinquish the advances that have come in the last four years of war. A scarcity of common labor will, we believe, be pronounced for a long way ahead. The nations of Europe will take restrictive measures to stop emigration—if, indeed, there is any tendency to emigration on the part of the workers, for Europe has a vast program of rehabili-

tation to carry out before it can repair the ravages of more than four years of bitter warfare, and its workers, who will not have to bear in considerable part the direct burden of taxation, will undoubtedly find plenty of labor at hand with a rate of remuneration passing all precedents.

"Indeed, the owner who now places his plans in the hands of the contractors will profit very considerably, for the old, old story will surely repeat itself. Contractors who have had scanty gleaning at the best during the past few years, or who have drifted into essential war work of one kind or another, and who are hastening to re-establish themselves in their old field, will be anxious to get actually into the field with a job or two, which will enable them to build up their working organizations. They will want to be in a position to offer steady employment to the tried and reliable employees of former years, who have formed the nucleus of their field and office forces. Hence, they will be willing, in many instances, to sacrifice initial profits to this desire, and the owners who place their contracts now will benefit.

"There are a good many other things to be considered. For the next year or so there will be a big job of policing to be done in Europe. America will probably share in this work. Announcement has been made that the entire American army can be transported home in three months, but it is not probable that any

attempt will be made to do so. Some of the troops—the greater number, undoubtedly,—will be brought home and mustered out of service, but hundreds of thousands of men will be still engaged in the military and naval forces of the country after the lapse of many months—perhaps of a year. That will have a natural tendency to reduce the men available for work at home, and will have a tendency to keep labor prices up—though it must be said that in all likelihood wages will never go back to anywhere near as low a point as they were four years ago.

"There already are signs of a big demand for residence construction. Some four million young men will no longer be housed in cantonments and army camps. They will require homes of their own as they are again absorbed into the industrial life of the country.

"Future prices of building materials are, of course, dependent largely upon the Government's attitude. It will not be so easy for the Government to relinquish control of the railroads, and it appears extremely unlikely that in any event freight rates will be reduced very considerably, if at all, until the railroads are established on a sound financial footing, with enough trackage and equipment to meet the demands of the expanding industries of the country."

\* \* \*

**C**ERTAINLY construction seems to meet the needs of the country in this time of transition from a war to a peace basis. Besides acting as a means of providing buffer employment during this period, building does not draw the money put into it away from the community, but becomes a source of taxation. Also, the money used in construction passes from one hand to another and still remains in the national banking system, leaving on its way a permanent evidence of wealth.

One of the most encouraging phases of the situation is that there are so many business organizations uniting in the demand for building as the logical means of tiding the country over the transition period.

At the recent War Emergency and Reconstruction Conference, held at Atlantic City, William M. Garland, of Los Angeles, Cal., President of the National Association of Real Estate Boards, endorsed the building of homes for workers. The National Association of Real Estate Boards, said Mr. Garland, are intensely interested in the development of home life, and the splendid citizenship which results therefrom. We desire particularly to encourage the building of homes for the working classes. This industry has, by abridgement and curtail-

ment since February, 1918, been absolutely stopped; and, the only homes erected for working men have been by the Housing Bureau of the Government of the United States, which has constructed thousands of houses, which were to be occupied by laboring men engaged in the fabrication of war work necessities. The abrupt, but nevertheless welcome, termination of the war leaves these thousands of houses in a state of incompleteness, and consequently unoccupied. Through the influence of town planners and architects communities were in process of development, all of which should and must be abandoned; and the Government must now realize, as best it can, from the early disposition of these half finished developments.

I advocate that all such buildings should be sold, which have been built under the various housing acts, as soon as they can be advantageously disposed of; for public policy and American tradition seem to demand that every semblance of control of the home by the Federal Government be destroyed on the instant that the necessity for such control ceases to exist. This sort of paternalism is not an American institution.

It is my opinion that the real American desires to own his own home. The safety of America lies in the final analysis in the hands of that class of citizens. There can be no doubt that in times of peace the greatest happiness lies among the contented home-owners; and in time of strife, when our citizens are called upon to bear arms in defense of their country, the man who owns his own home is inspired to fight that much harder for his flag.

I predict an active building period throughout the United States as a result of the spirit of economy and thrift which has permeated every home since the commencement of the war, and as a result of the removal of the restrictions which have prevented all classes of private construction during the past year. I should like to have this convention of industrial representatives strongly endorse the sentiment of "Own Your Home" as being thoroughly constructive and American. The Realtors approve this sentiment, not from a selfish viewpoint, but as a standard of better citizenship, of thrift, and a more general distribution of wealth, employment and enduring happiness.

**A**CCORDING to F. T. Miller, Director, Division of Public Works and Construction Development, U. S. Department of Labor, Information and Education Service, Washington, contracts for 800 public school houses, totaling some \$80,000,000, have been held up

as a result of the war, according to but a partial tabulation of building conditions throughout the United States, which has been made by the Statistical Section of the department. It is estimated that the completed tabulation will show that these projects, now being held in abeyance, aggregate more than one hundred million dollars.

In round numbers, this is about one dollar per capita throughout the United States. As school buildings are customarily financed on twenty-year serial bonds, this means an installment payment of about five cents per capita per year by the people of this country, if they would have their school program put through at the present time.

Assuming that a decrease of twenty per cent. in construction costs might develop during the next four or five years (and this is regarded by many as a maximum decrease), the immediate completion of the Nation's school program would involve an excess of only one cent per capita per year over the per capita cost, even if construction were delayed for several years.

The education of the country ask, shall the country have its schools now at five cents per capita per year, or delay having them for four or five years in order to buy them at four cents per capita per year?

To interest the Nation in forwarding this particular work is one of the undertakings of this new division of the Department of Labor. In this purpose it has the support not only of educators, but of sociologists. They believe that the nation-wide lack of public school accommodations, which is known to all, is one of the earliest problems that must be solved with others that belong to the reconstruction period.

Calvin Coolidge, Governor of Massachusetts, who with the Governors of the other States recently received from Secretary of Labor Wilson a request to stimulate interest in public works and civil construction, has announced the appointment of a special committee composed of representatives of labor and capital to forward this purpose.

Governor Coolidge has, in addition, issued an inspiring statement to the people of Massachusetts advising them that Massachusetts does not intend to be the "sport of chance," but the "master of her destiny."

The Governor argues that the return to normal business life will not be accomplished by worrying over what may happen, but can only be accomplished by doing the tasks at hand. His statement is a gospel of courage and optimism not only

### INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 20, 1919.—Sealed Proposals will be opened in this office at 3 P. M. February 10, 1919, for a heating boiler, hot water tank, etc., for the Hospital Unit, Type "A," at the United States Marine Hospital at New York, N. Y. (Stapleton), in accordance with drawing and specifications, copies of which may be had at this office or at the office of the Superintendent, New York, N. Y., in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### AS THE EDITOR SEES IT.

(Continued from Page 44.)

for the people of Massachusetts, but for the country. The substance of his message follows:

"Men entrusted with the grave responsibility of managing the business affairs of Massachusetts are now called on to decide whether they will continue their activities as usual or wait to see if there is a decline in prices. No doubt there will be a decline in some directions. The public question now is how best to proceed for the general welfare. It seems clear that a gradual decline would be preferable to a perpendicular fall in prices. It should be remembered that prices of labor and materials are all relative. When once adjusted the amount is not of great importance. There are two things to do. One is to wait; the other is to go on with business activity. If everybody waits there no doubt will be a perpendicular fall with attending want, distress and calamity. If people will go ahead with business, while there may be a gradual decline, it can be borne with the least inconvenience.

"I realize that business is and ought to be conducted for profit. Still, there is not only the duty, but the expediency of keeping the working force, the organization, in dull times. We have all worked together to win the war. Let us all work together to enjoy the blessings of peace. The working people of Massachusetts, her most valuable possession, must be considered and they must be maintained.

"Instead of being the sport of chance, Massachusetts ought to be the master of destiny. Instead of waiting, we should act. Government has released raw materials, labor and transportation. There is plenty of money, which makes a demand for merchandise. There ought to be no lack of a disposition to act, no lack of enterprise.

"The question is where to begin. A committee working with our board of

labor and industries suggests the revival of building. This industry has been at a standstill for the past two years. It is in its nature basic. A contract for any kind of building at once makes the opportunity for other contracts for steel, cement, bricks, lumber, plumbing, steam heating, electrical equipment, and all other materials required in construction. This would mean the employment of large numbers of people in various factories manufacturing these materials.

"In this the various agencies of government ought to take the lead. It is therefore urged that all the departments in the commonwealth, counties, cities and towns should start the foundations, at least, for school houses, hospitals, libraries, police and fire department headquarters, bridges and other public buildings. There are many of these operations partially completed, and many others for which plans have been drawn and money appropriated. If public construction begins, private construction will soon follow us as the increase in population requires more housing facilities. There is also much construction work on the rail roads of New England which the roads themselves and the national government should be urged to begin at once.

"The material resources of the community must be used for the benefit of the people of the community. Such use is the only thing that gives them value, and the only warrant for their existence. Unless this is done by private enterprise, it will have to be done through the taxing power and otherwise, for the purpose of relieving the suffering caused by unemployment. Every facility is at hand for an era of great prosperity. What is needed is the courage to act. In the exhibition of that courage the government agencies must take the lead."

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

### POSSIBILITIES OF THE LITTLE HOUSE

It is regrettable that so few home owners, or home-builders know *good doors*. Not for a day, a month, or a year, but for a lifetime do people have to live with the doors which they select, or decide to have in their homes.

In this regard, we would advise every one who contemplates building a modern cottage of modest size and cost, to study a few door characteristics which, if known and observed will avoid mistakes, effect a saving and insure permanent satisfaction. The door is the index to the character of every home, and no other single feature in the home makes such a deep and lasting impression as the door, the first detail noticed on entering, the last thing seen on leaving, and the most prominent feature of rooms, some of which have as many as four or five doors. It has been said that, "No home is better than its doors." Be that as it may, we do know that it is of the utmost importance that both the exterior and interior doors of the modern individual home of modest size, should be perfect in every particular.

Architects know how many people are willing to sacrifice principles of beauty and fitness in selection of doors for something that for the moment is "the style" and they want that, forgetting that such architectural features cannot be changed each year as we are prone to do with wall decorations, draperies, etc.

Of all the various parts entering into building construction none is subject to such vigorous service as the door. Doors must withstand the blasts of winter, the scorching rays of summer sun, the furious onslaught of snow and rain and the changes from dry artificial heat in winter to excessive humidity in summer. And when your architect specifies a door which will meet these conditions, and assures you that, that special make, or kind of door, will stand the test that tells, do not be so foolish as to substitute another type of door simply because it is "cheaper."

The only perfect safeguard against such errors in judgment is, that, before you build, make it your special business to know "good doors"; then when your

architect hands in his specifications, with plans, you will decide with confidence and correctness. Aside from the question of appropriateness and durability of exterior doors, is that of "distinction or individuality"—that tantalizing, elusive will-o'-the-wisp that all men and women crave and few attain, when it falls to them to select the doors for a new home.

Interior doors are even more important in their relation to the general success of modern homes than exterior doors.

Then, too, in their relation to the general decorative scheme they very materially affect the appearance of your wall and window hangings, the appearance of your furniture; floor coverings, in fact, are often the keynote to the decorative treatment of a room, or several rooms which are connected either by single or double doors.

No question will be of greater importance to you if you are planning to build a home, than that of suitable doors for the interior of the house. Much valuable time, money and annoyance would be saved in this one great item of home-building if owners would only give it deeper thought, study and care, and not be governed by prevailing fads and fancies which come and go in which "doors" are good or bad, at will of a whimsical people, which, in a great degree, controls architectural detail.

A competent architect may generally be dependent upon to work out these details correctly and to specify the right style of door for individual houses if he is requested or permitted to do so by the owner.

The fate of the door in American home-building has been an interesting and peculiar one.

An eminent student of architecture has said of the "door," "Had the other chief features of the house, such as windows, fireplaces and stairs been pursued with the same relentless animosity by architects and decorators, we would no longer be living in houses at all." This has been especially the fate of the inside doors. About a half century ago the door that slid into the wall was looked

upon as the model of up-to-date and perfect house door. Many subsequent improvements, caused this improvement in doors to be generally adopted as a favorite method for closing large openings between adjoining rooms.

The value of large closable openings between rooms had long been recognized with the advent of the "sliding door"—it was especially necessary to have some substantial, practical means for closing such openings, in cold weather, for at that time even large houses were heated by means of open fires and stoves which made it quite essential that heat be conserved by closing one big room off from another.

With the establishment of a system of turnace heating for homes where all rooms might be heated uniformly, many people who had accepted the heavy sliding door as a necessity only, quickly eliminated it, substituting the more decorative and whimsical styles of openings between rooms in which doors were not considered an essential part. This was all very well when rooms were big, and houses were built with many more rooms than were actually used each day by the family.

But, the average modern American house has been growing less expensive and pretentious, and with the elimination of all unnecessary cost in building, has come a new demand for some substantial, but artistic method for closing the openings between rooms so that more privacy may be secured in the smaller houses.

It had long been a custom in America to use doors made of glass, where an opening six or seven feet high, with its sill on the floor, opening upon a terrace, or into a "summer-parlor"—it is called a French window, almost universally used in France and beautiful for any exit that "gives" as the French express it, on lawn or veranda.

We believe that one of the most practical, and at the same time artistic applications ever made of the "French window," has been that which American architects have adapted as doors to the openings between rooms in modern cottages of modest cost, as well as the larger and much more dignified and elegant homes. When they were first introduced in our American homes—

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO., Tasket Street Wharf, Delaware River, Philadelphia.**

First, the "French door," as it now is called, is sufficiently decorative to please the majority of women.

Second, it has in a great degree restored an appreciation of the architectural lines of a room, and has given to the treatment of openings, something of the attention which architects once gave to well-made door-ways, which, for a time, almost disappeared—as this one feature of the architect's best work passed into the hands of the upholsterer—who hung the openings between rooms with portiers of tremendously fanciful types, which for years caused the fashion for "display" of stuffs about the doorway, thus, substituting a textile architrave or one of wood.

There is really no need for hanging even simply, decorative portieres, where French doors are used as openings; yet it is done and is likely to become a much abused fad. We speak more especially in relation to "Little Houses" where less of formality and luxury is supposed to exist. We do, however, urge, or advise, the use of handsome silk curtains of plain neutral color, hung in the artistic French style, covering a little more than three-fourths of the door length of the glass portion of the door; these may have applied inserts of heavy lace in form of panels, or borders, providing the room is handsomely furnished; but, if your wall decorations and room furnishings are simple, the plain silk French curtain is best for inside glass doors between rooms.

Privacy would seem to be one of the requirements of civilized life; yet it is only necessary to observe the planning and arrangement of the average small house to see how this has been disregarded.

We seem to forget, or do not care to apply the truth that each room in a house has its individual uses.

If the living room is to be a part of the hall, and the dining-room a part of the library, all three will be equally unfitted to serve their special purpose. Much of this comes from our willingness to sacrifice a certain kind of comfort to the "effects" obtained by wide openings and extended "vistas." The clever use of "French doors," in a very great degree, gives us the assurance that our home-loving men and women are going back to the individualized room, set apart, when need be, or opened up in friendly relation to others when occasion arises for same to be made manifest—used so extensively in American homes.

We have seen many beautiful houses, which had been built with large openings between rooms and draped until it

was not possible to find a bit of wood-work anywhere about the opening—transformed by the substitution of "French doors."

The upholstered work was abolished, and common sense replaced the dust catching and germ breeding mass of drapery by the sanitary glass door, and the whole atmosphere of the house was changed.

The only fear which we have concerning this modern adoption, this one of the oldest and best styles in doors, is, that it will become common and be used with so little judgment by speculative and other small house builders, as to kill the popular use of the "French door" by the better class of home-builders.

In France, a style is never made so ordinary as to cause it to become cheapened in appearance, and finally fall into disfavor and disuse.

In America, if a "French door" can be manufactured cheaply enough, it will be used in the common type of house; then, some new thing will be demanded of architects and the door will have another story to tell to future home-builders.

Social adjustments in America have created demand for homes which are for comfort and convenience and are free from ostentatious display and formality—men are demanding "Little Houses" which have dignity without lavishness or austerity—and the war has but added to this demand.

Many a woman who has spent the greater part of her life trying to save up and "get ahead" so that her family might have a large and pretentious home and all that such a home implies, has suddenly awakened to find that it is not at all necessary; that no one cares whether she has a big house or a little one, or that her windows were to be hung in the finest of hand-made laces or the simplest of plain scrim; that she has one servant or ten, or that she has none at all. In fact, she finds there is nothing of less importance these days than the mania for display and owning things just for the sake of the things and the possible effect which such ownership might have upon one's social distinction.—*Realty.*

#### MY EXPERIENCE IN ADVERTISING.

A few years ago, when I hung out my shingle as a carpenter and jobber, I began by hustling among the real estate agents for work. When the first season came to a close, I guess I had patched more fences, sheds, and out-houses than

any six carpenters in St. Louis. It was the same old grind month after month—pay my material bills and go broke. If there was any profit left, the real estate agent got it as his rake off.

This set me to thinking. What was I to do to get away from this cheap work? It appealed to me that the only thing to do was to advertise. But what must I advertise? How was I to make a prospective customer call on me instead of my competitor? Is it not a fact that in the carpenter business, being an old line, you have a pretty tough proposition trying to convince a man that you will give him more for his money than the other fellow? He knows that my lumber comes from the same lumber yard and that I employ the same kind of labor.

The idea struck me that I must find out what class of work was in the greatest demand. This information I got by going over the building permits for about six months previous to that time. I learned that sleeping porches and garages were in the biggest demand. I then began to search through catalogs and magazines for pictures that would be suitable for small advertisements—one for the sleeping porch and one for the garage. I made up the ads with as few words as possible. This, of course, gave me a chance to use bigger type. I would first run the garage ad in the daily paper and in a few days I would run the sleeping porch ad. I kept this up as long as my financial condition would permit, at the same time keeping track of just how much money I spent in the whole course of advertising. The results were:

|                                     |       |
|-------------------------------------|-------|
| Cost of the total campaign .....    | \$406 |
| Inquiries for garages .....         | 58    |
| Inquiries for sleeping porches .... | 27    |

Out of this I landed fourteen garages and eleven sleeping porches. The average cost on each job for advertising was \$16.25. The other sixty jobs were lost on account of competition. I simply created the demand and my competitor reaped the benefit because I had to add the cost of advertising to my jobs; but a lot of other work came my way which paid well, and at the end of the campaign I had money and gained many new customers which I would not have had without advertising.

But as winter approached, business became dull. The few odd jobs which would pop up from time to time would scarcely pay expenses.

I finally got a phone call from a lady who owned a flat in the southern part of town. Her flat had no way by which the owner, who lived in the second floor, could reach the basement to tend the furnace without going outside in cold and

inclement weather. This was not the only flat built that way. About one-half the houses in St. Louis are flats and two-thirds of these flats have no inside entrance to the basement. The stairways are about 3 feet wide and lead from the second floor to a short hall on the first floor. The hall can be no wider than the stairway without taking valuable space from the first floor.

How was I to carry the stairway any farther?

To solve the difficulty of the narrow space for the staircase, I conceived the idea of making a door right in the stairs, these to lift on bearings so as to open a way to the flight below. I perfected this idea and have received a patent thereon. The landing is only the width of the stairs that come down to it. On pressing a catch in the lowest step (a kick with the toe will do it), five of the steps rise, swinging on bearings at the uppermost part of the fifth step, and are lifted by a weight hanging from an arm underneath. This leaves an entrance to the flight be-

low, and one can close the stair-door on going down by simply pulling it shut. Coming up from below, the person who wishes to open the stairdoor finds a cord hanging underneath it; a pull on the cord releases the catch and the stair moves upward.

Now with the stair-door completed, the next thing to do was to advertise it. As I had the stair-door fully patented, I had the "jump" on my competitors, and the demand that I created for it was all mine. I had an advertisement inserted in one of the St. Louis papers a few times at a cost of \$46.50 each. The first ad pulled fifteen jobs and the rest did almost as well. The cost of advertising was not much more than \$3.00 per job.

There are hundreds of stair-doors in St. Louis now, and you can bet that I get my share of all the other work, too.

Advertising for remodeling and repair work will pay if the advertiser will keep abreast with the needs of the people.

WM. RODGERS.

## GOOD ARCHITECTURE AS A PROFITABLE INVESTMENT FOR THE OWNER

There still remain in this world persons who believe that architecture is a purely ornamental profession—that the man who retains the service of an architect to plan and superintend the construction of a building does so because he wants a few additional artistic effects, for which he is able and willing to pay.

The increased cost of building materials has been a pronounced factor in educating the public regarding the true field of usefulness which the architect occupies. A score of years ago a few thousand dollars sufficed to build a large box-like structure, with a great deal of room, but with no architectural merit. Architecture played very little part in the vast majority of buildings built a score of years ago. But when costs multiplied, owners naturally devoted more thought to the underlying requirements of good building construction. The architect is on a very much higher plane than he was a score of years ago, and the public is beginning to have a growing conception of the important role the architect should play in the development of the country.

It does not require any considerable knowledge of architecture to appreciate the superior appearance presented by any community in which the services of an

architect are utilized in the construction of new buildings.

There are still a good many small communities in the country in which the carpenter and the mason are consulted rather than the architect when a new building is to be constructed. The layman does not stop to consider when he encounters such a community whether the business and public buildings and the residences were planned by a competent architect. He merely knows whether the town is pleasing to the eye—whether it bears the mark of distinction that the prevalence of good architecture imparts to any community. The first impression that he gathers from his initial visit to a town is generally the lasting impression, and more than nine times out of ten it is correct.

For it is usually true (probably invariably true would be a safe statement) that a town in which the representative citizens appreciate good architecture, is a better town in which to live than a community in which scant heed is paid to the call of art. The citizens of the town in which the architect is called in to design business buildings and residences—even though the buildings be of small dimensions—have, as a rule, a wider intellect-

ual horizon than men who believe that architecture is merely useless ornamentation, and that the carpenter and the bricklayer can create a building of harmonious and attractive design.

Then again, it is true that the citizen who wants an architect to design his building, is generally a shrewd and long-headed individual as compared with the man who believes in paring down expenses by eliminating the architect's fee. The architect who is master of his profession must not only plan a building of harmonious design, and attractive appearance, but he must keep constantly in mind the matter of practical every-day utility. There must be no waste corners in the completed building, the interior must meet modern requirements of light and ventilation, the heating plant must be adequate, and yet there must be no waste of either material used in construction or fuel. The building must be planned with close attention to the purpose for which it is intended, in order that the interior arrangement may be completed to the end that the owner, instead of finding after the lapse of a few months or a few years that there are many features of the building with which he is not satisfied, will have an increasing satisfaction in the ownership of the building.

Good architecture increases the value of a building. That is a point that the astute owner always keeps in mind. Five thousand dollars or ten thousand dollars will buy just about so much material in any market. But five thousand dollars' worth of material built into a finished structure of architectural excellence, has a higher market value than an equal or greater amount of material used in the construction of a building that is not pleasing to the discriminating eye, and is not arranged with a view to practical requirements.—*Improvement Bulletin*.

### HERIDITY.

"Do you believe in heredity?"

"Yes, said the school teacher, "there's a little boy in my class who has to return home every day for his books, pencils and pees. His father's a plumber."

### FIRST AID TO THE INSECT.

Architect—"I wonder who first thought of the sleeping-porch."

Householder—"I don't know, but I imagine it was some mosquito."—*Ex.*

## As The Editor Sees It

THERE are certain definite and serious problems which this country must face during the period of reconstruction. There is no doubt that America will successfully pass through this crisis as she has through others but probably no more important transition period has ever before occurred in this country. Commenting on the dangers of this period, Mr. Harold G. Moulton, Assistant Professor of Political Economy, University of Chicago, and a member of the War Labor Policies' Board, discusses these dangers in an article prepared for the War Committee of the Union League Club of Chicago. "To present the problem in definite terms," says Mr. Moulton, "it may be stated that one, or all, of the following results are not impossible during the next two or three years:

"(1) There may be a substantial reduction in the total output of industry—at a time when there is a greater need than ever before for increased production.

"(2) There may be a serious reduction in the rate of wages before there is a corresponding fall in the cost of living.

"(3) There may be a large volume of unemployment, serious privation for millions of people, and an unparalleled burden placed upon our charitable institutions.

"(4) There may be an outbreak of

industrial warfare such as this country has not known in decades.

"(5) There may be a rapid increase of revolutionary doctrine—subversive of the principles of American life."

As a means of successfully overcoming the difficulties of the situation, Mr. Moulton further suggests that "in view of the established facts of our industrial experience and in view of the grave possibility of depression during the transitional era—indeed, I think one may say in view of the facts of the immediate situation—with industry everywhere hesitant, and unemployment already rapidly increasing, is it not perfectly plain that a comprehensive program of public works should be instituted just as soon as possible? If this nation is not willing to heed the simple lessons of experience, and if we are not disposed to seize at once the opportunity to insure ourselves against the dangers of the transition periods by establishing a perfectly feasible program of buffer employment on public works, we deserve to reap the whirlwind that will lie before us. In view of the present social temper of the world we cannot afford to sit with folded hands and await the return of the troops with nothing but fine resolution and good wishes to extend them. If, in our easy-going optimistic American way, we neglect to provide for those who have so unreservedly offered themselves in the nation's service the opportunity upon their return

to earn the means of a self-reliant existence, we will have sown the seeds of a social revolution in this country that will rock our democratic institutions to their foundations.

"We know as a matter of course that we cannot permit either our returning soldiers or war workers to starve; we know that the least we can do, if jobs are not available for all, is to open our charitable purses and extend them such indirect alms as we may. We have the choice, therefore, of two methods of meeting the situation: (1) by providing employment on public works of enduring value; (2) by supporting by public charity an army of unemployed in non-productive idleness. The former is the way that will make for satisfied self-reliant American citizenship; the latter is but a palliative—it prevents starvation, but it does not avoid ingratitude and bitterness of spirit, nor make for orderly social and economic life. The former is the socially efficient way, the way that conserves human resources and increases the productive capacity of the nation; the latter is the socially wasteful and inefficient way—that makes for the degradation of the individual and the depletion of national productive power.

"The latter is the way of the old era of ill-adjusted and unregulated industrial life; the former is the way of a new era of economic and social efficiency."

## HOUSING AND RECONSTRUCTION

ADDRESS BY MR. THOMAS ADAMS, F. S. J.

*Town Planning Adviser to the Conservation Commission of Canada, at the Seventh National Conference of Housing in America, Boston.*

If one is to judge from the words of many who voice public opinion a new idealism is abroad in the civilized world. Apart from the triumph of our principles over the enemies who have sought to thwart them we have to rejoice in another triumph over some of the defects in ourselves. Who shall say that this is true till after the tribulation of war has ceased to tear our hearts and the ordeal of prosperity and peaceful development comes again with its accompaniment of selfish indifference to social injustice? Who shall say that what we are witnessing is a passion to do or but a phase of thought that will pass away as the emotions stirred by the events on the field of battle become less near and real to us? The war has broken down much of our self-centered complacency and has given us more thought for human welfare, but will the good it has done us not vanish with a period of passivity? Emerson said in his address on "Man the Reformer" that the hour had struck for great reforms for the pursuit of high ideals with some real hope of achievement, but the hour passed and men fell into the old groove of *laissez-faire*.

Today we have a repetition of the opportunity—nothing more. All the old idolatry of custom and prejudices still parade the market place and color the verbiage of the politician; and are flouted in our faces as the things that constitute experience. Happily in a few directions we have made important progress. We have learned that real experience must take science as its hand maiden to accomplish real results. No longer is that vague thing executive ability regarded as of necessity divorced from knowledge and scientific training.

In no matter do we need more to get away from custom, and clap-trap about uninformed executive ability, than in municipal government and housing, with all deference to the many able amateurs who have heretofore controlled our public affairs.

Again we have seen the heads of great commercial and industrial enterprises, belonging to a class who used to joke about the sentimentalism of the housing reformer, become the most active participants in the work of improving housing conditions. We hear less of the scorn about social "uplift," and more of the place which good housing occupies in producing efficiency and contentment of labor, reducing labor turnover, reflect-

ing its better environment in better government, and laying the foundations of an improved and more intelligent citizenship.

The home is the nursery of industrial progress as well as of patriotism, O. W. Holmes said that the education of a child should begin 100 years before it is born and the home is the place where it is begun—whether it be in a degrading slum or a healthy cottage dwelling.

A home is not a mere place of shelter in modern democracy; it must provide conditions which will promote efficiency in labor and strength of character in citizenship. It is the foundation on which we build up the social structure—commercially and politically.

The home connects the family, and the family, and not the individual, is the unit of the civic structure. A true housing policy must go further than improving of providing dwellings; it must be part of a comprehensive policy of town and country development. We must apply more thought to the theories and practical tendencies of urban and rural growth, and fit in our housing policies as part of a comprehensive scheme of urban and rural organization.

The problem of housing has become especially acute during the war. Although made worse by war conditions in reducing the supply of labor, materials and money, the problem has not been created by the war except in that temporary aspect connected with the housing of war workers. In its broader and more general social aspect it is a problem of national proportions and importance, in regard to which past failure is written large in every community, and success can only be achieved—first by humble admission of our defects, and second by building up a nation-wide organization capable of dealing with it on business and scientific principles.

A feature of the problem that has to be considered is the necessity for apportioning responsibility between all classes of government—national, State and local—and of linking up all three in the practical efforts that are made to deal with its solution. Private enterprise must be encouraged where it is good and only restricted in its activities where it is bad.

Another feature of fundamental importance is the regard we have for private rights in property. The law of free contract and the rights of ownership in

regard to private property must be protected; but not as hitherto, in a sense which makes it superior to or supreme over the law of human liberty. A man's rights to a healthy home are greater under curtailed law—including that which underlies your constitution, which put persons before property—than the rights of the owner of titles.

The attitude of your Congress to war-housing while admirable from the standpoint of patriotism was a revelation of weakness—if I may humbly say so—to the general social aspect of the problem. Housing in connection with reconstruction is a different thing to housing connected with war industries—and requires a broader social vision and more courage to deal with it. It is beset with both practical and constitutional difficulties. In making financial provision for housing accommodation in connection with war industries Congress has acted only on acceptance of the compelling events which made the winning of the war contingent on good housing conditions being provided for war workers. The exigencies of war forced the Government to act in this matter against the inclination that the provision of houses is rather a question for private, or at least for local, enterprise. Having regard to past history the reluctance of the Government in entering upon this field is not surprising. You might say that in the whole American Continent there is almost universal prejudice against Government interference with private enterprise.

Most people want to see good housing conditions provided for the workers; but there is considerable difference of view as to the best way to improve these conditions and those who oppose Government housing do so from strong convictions that it is unsound. It is not in any way disparaging to them to suggest that they will resist its becoming a success if they can, because they honestly believe that by such resistance they will be serving their country. I think the experience of national and municipal housing in England, so far as such experience is of any value as a guide to us on this side of the Atlantic, has clearly demonstrated the fallacies which underlie most of the objections to Government housing. But the fact remains, that these fallacies will have to be overthrown by practical demonstrations on this continent before they will cease to be factors to be reckoned with in connection with the housing problem.

Consequently, it may be anticipated that every act of the housing executive you may set up will be watched, every mistake exaggerated and every good achievement minimized.

(Continued on Page 61.)

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Pier**, Kenilworth street, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, 522 Bourse Building, Philadelphia. Single Deck Pier and Offices, wood piles, concrete foundation, steam heating, electric lighting, hollow metal sash, rolling steel and kalamain doors, hollow tile, metal lath. Owners taking bids, due February 14th. Snare & Triest, Pennsylvania Building; Hughes-Foulkrod Co., Commonwealth Building; Wills-Ludwick Co., 1706 Sansom street, are figuring.

**Factory Building**, 1713-15 North Tenth st., Philadelphia. Architect, private plans. Owners, John E. Sjoström Co., Inc., 1719 North Tenth street, Philadelphia. Brick, 2 stories, 68x100 feet, slag roof, wood floors, stone foundation, mill work, plastering (heating and lighting reserved). Plans in progress. Will take bids in about one month.

**Residences (35)**, Drinker street and Wayne avenue, Germantown. Architect, Bart Tourison, Land Title Building, Philadelphia. Owner, John H. McClatchey, Land Title Building, Philadelphia. Stone and brick, 3 stories, slate and shingle roof, electric lighting, hot water heating, tile work. Owner is ready for sub-bids.

**Garage (add.)**, 1516 Cayuga street, Philadelphia. Architect, private plans. Owner, Charles B. Ware, on premises. Brick and stone, 1 story, 100x49½ feet, slag roof, stone foundations, hot water heating, electric lighting, 6 hollow metal skylights. Owner taking bids. Thos. C. Trafford, 1613 Sansom street; Henry P. Schneider, 4713 Old York Road, are figuring.

**Stores (2) and Garage**, Fifty-fifth and Woodland avenue, Philadelphia. Architect, Fred N. Greisler, Lafayette Building. Owner's name withheld. Brick, 1 story, 86x120 feet (mill construction), composition roof. Plans in progress. Details undecided. Architect will be ready for bids in about two weeks.

**Store Building (alts.)**, Silver street and Germantown avenue. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owner's name withheld. General alterations, flush bulks, marble work, electric lighting, new partitions, etc. Plans in progress. Architect will take bids in ten days.

**Packing Plant (add.)**, 425 Fairmount avenue, Philadelphia. Architect, private plans. Owners, H. C. Derby & Co., care of T. C. Robinson, construction engineer, Swift & Co., Ninth and Girard avenue, Philadelphia. Brick, concrete and steel, 2 stories and basement, 95x20 feet 1½ inch. Barrett roof, concrete foundations, electric lighting, concrete and asphalt floors, hollow tile, electric lighting, rolled steel sash, fire and Kinnear doors, water cooling tower. Owners have received bids.

**Residence**, Carpenter street and Wissahickon avenue, Philadelphia. Architect, Laurence Visscher Boyd, Harrison Building, Philadelphia. Owner, J. Morgan Lister, West End

Trust Building, Philadelphia. Stone and brick, 3 stories, 40x30 feet, shingle roof, pine and oak floors, hot water heating, electric lighting, tile and arble work. Architect taking new bids, due February 5th. Charles Johnson, 5701 Boyer street; Wm. J. Grubler & Co., 219 East High street, are figuring.

**Department Store**, 925-27 Market street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, L. W. Hirsch Co., 923 Market street, Philadelphia. Extensive remodeling of building, 5 stories and basement, 40x200 feet, carpentry, cabinet work, steam heating, electric lighting, marble and terrazzo work, hollow metal sash, kalamain doors, metal bulks, fire towers, iron stairs, ornamental iron work, tile, hardwood and maple floors, metal lath, 3 elevators, safety treads, roof ventilators, waterproofing, dampproofing. ### HOUSING AND RECONSTRUCTION

(Continued from Page 56)

The difficulties you have to encounter are greater than have had to be encountered in England for several reasons. In the first place national and municipal housing in England has been a subject of experiment for thirty or forty years. Theories and fallacies have been put to the test of practical experience. It has been ascertained what is the line of least resistance and what are the actual financial responsibilities to be faced in providing housing accommodation. People have become accustomed to obtaining assistance from national funds for housing purposes and all countries and communities are almost above everything else the slaves of custom.

There is also another difference between the American and the English

point of view, which has to be considered. During the first year of war very little attention was given in England to the questions of reconstruction and readjustment after the war or to housing or any other social question. As the war developed, people in Britain came to recognize that the questions of reconstruction and readjustment of industrial and social conditions after the war were next in importance to the prosecution of the war itself. Hence in the midst of the war, in 1915, they created a Ministry of Reconstruction in England with housing and town planning as one of its most important fields of enquiry. On the whole, it has to be recognized that the national housing policy of the United States has had nothing to do with the question of reconstruction. It is purely a wartime policy and anything which goes beyond the provision of houses needed for the prosecution of the war will be outside the scope of the policy hitherto pursued.

The provisions of houses, as part of a policy of reconstruction, has still to be begun in this country as in Canada. Yet what were among the reasons you inaugurated a war housing policy? Why did your Government vote hundreds of millions to house war workers? Read the evidence before Committees of Congress and you will find that some of the most important reasons were that it would increase output in the shipbuilding yards and munition plants by increasing the efficiency and contentment of the workers and that it would help you to win the war by stabilizing labor conditions. Are these reasons without application to peace industries? If it is true that you needed good housing to win the war is it not equally true that you need good housing to win and maintain the victory of peace?

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.  
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Professor Irving Fisher, of Yale, estimates that you would save from \$1,500,000,000 to \$3,500,000,000 a year with better health conditions; that you lose 300,000 persons annually by deaths from preventable diseases; that your feeble-minded children cost you \$60,000,000 and crime \$600,000,000 a year. Much of this is undoubtedly due to unsanitary homes.

The house-owning population of this continent is not so large as is sometimes assumed. Your census of 1910 showed 54.2 per cent. of your homes were rented and 45.8 per cent. owned—but of those owned 15 per cent. were encumbered with mortgages—reducing the homes owned free to about 30 per cent.—with probably half of that figure in the older States and cities.

Only 12.1 per cent. are owned in New York.

Your best informed social and public health workers declare that all they can do to relieve the social wreckage is counterbalanced by bad housing conditions. As Mrs. Bacon says, these conditions pile up the wreckage faster than the churches can evangelize, the schools educate, or the doctors cure. I think it is a fair thing to say that you lost more of your citizens of working age during the recent influenza epidemic than you did in the war largely because of crowded and unsanitary dwellings.

It is not only from congestion and slums in the cities that we suffer. We have bad conditions in the country districts in Canada—and so have you. These bad conditions give the sceptic the ground for arguing that all the talk about slums causing a high death rate is nonsense, that it is the people who live in the slums who cause those conditions, as witnessed by the sickness and death rate in the rural districts. Is it any excuse for unhealthy conditions in the cities that you have unhealthy conditions in the country? Is it not all the more to be deplored that the degenerating influences of the city slum are not even counteracted by the absence of similar influences in the rural districts? Even in the great West with its vast spaces and cheap building materials you have slums on the prairies and hillsides. Listen to this from the May Review of your Department of Labor:

"The California Commission of Immigration and Housing has determined in connection with the riot which occurred on the hop ranch near Wheatland on August 3rd, 1913, that probably the most contributory factor was the poor housing and sanitary accommodations afforded the workers."

This problem of bad housing is a national problem, affecting both rural and urban life. The war has shown us the importance of reconstructing our rural conditions with a sounder scheme of rural organization in the interests of the city as well as of the country.

The war housing problem has passed into history so far as housing purely war workers is concerned, but there still remains the problem of making up for the shortage of houses caused by scarcity and dearness of labor, materials and money.

Bad housing conditions are not caused by scarcity so much as by defective government and false economic ideals; as during times of an excess supply of houses the slum conditions always persist in nearly as great a degree as at other times. The scarcity, however, creates a shortage among the more highly skilled laborers and the middle classes and makes the problem more extensive, as we have it today—with overcrowding not only among the poor, but among the well-paid artisans, clerks and professional classes. We need more houses as well as better houses.

Then there is another type of housing question which needs special attention; and for which we of this generation have least excuse. This is the continued building of unsanitary shacks and crowded three-deckers in the open country all around the fringe of our cities and towns.

Broadly speaking, the problem of housing may be divided into three parts and the remedies three in number. We must apply the rule of the three R's to deal with them. We must raze the slums, raise the standard of our housing codes in regard to existing dwellings, and raise the better type of new dwelling.

Good forms of private enterprise will benefit from all these remedies, but as a result of age-worn prejudice promoters of good and bad forms of private enterprise will object. To make slum-owning illegal will destroy private enterprise; let that kind be destroyed. To raise standards of housing codes will make building dearer; let it be dearer so long as we get value for our money. Wages will respond to the higher standards. In every country where housing standards are low, wages are low. The German people are amongst the lowest-paid and the worst housed. About 65 per cent. of the people of Berlin live in two rooms or less, as against 25 per cent. in London. Two-thirds of the Berlin people live in tenements of five stories or over. That is the chief reason for the high

tuberculosis death rate, and the excessive illegitimacy of Berlin, and for the fact the only 19 per cent. of the sons of Berlin-born parents were fit for military service. Wages keep in proportion to these low standards, and the contrary is also true where standards are higher.

In regard to new construction private enterprise will benefit all the time, by raising standards and employing public money and advice. Only the wild-cat speculator in land and the usurious lawyer who finances jerry-building will lose business, and both of these will gain in soul what they lose in cash.

Putting aside these obstructive elements which have prevented progress in the past, what is to be our program to deal with this great problem, and how is it linked up with the whole question of reconstruction? We will still find many Hindenburgs pinning their faith in the discipline of the front-line trenches that are cut through the industrial field disregarding the social conditions of the badly housed multitude in the slums of civil life in the rear, which may bring their highly organized and scientific industrial machinery to a sudden stop and destroy all their plans and dividends. A few weeks ago the German Army appeared to be still defiant and unbroken; now we know it to have been merely the outer shell that hid the rottenness at the core, produced by an over-confidence in military science and failure to recognize that success in war, as in peace, rests on the stability of the social organization that lies at the foundation of either a military or industrial army. In our industrial organization we have been prone to follow the German precedent in military organization—and to fail in emphasizing the spiritual qualities in our national life that in the long run are needed to give complete satisfaction to our material wants.

In Britain the program of reconstruction includes the restoration of shipping; the building up of the supply and allocation of raw materials needing to be replenished; the restoration of the means of transportation by road and rail; the re-organization of industries, the demobilization and reinstatement of returned men; the formation of Industrial Councils composed of employers and employees to adjust differences between capital and labor; the netting up of Interim Reconstruction Committees to advise regarding local aspects of reconstruction; the improvement of working conditions in field and factories; the increase of food production and the improvement of rural organization; and the settlement of the problem of finance. All

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

of these matters are of extreme importance.

Added to these are Health, Housing and Education. As the Minister of Reconstruction says, "All reconstruction policy must be based upon a healthy and vigorous population."

We must frame our policies so as to include the quality as well as the quantity of life if industrial and human progress is to be maintained in these growing countries.

The housing policy in England is an integral part of their town planning policy. It is recognized as a result of long experience that you cannot deal successfully with housing unless you deal at the same time with the proper and economic development of the land—which is town planning. Good housing connotes adequate light and air, restriction of density on the building lot, improvement of sanitation and street surfaces round the dwelling, healthy and agreeable environment, and all these things can only be secured by proper planning of the land, and not by mere planning of the dwelling itself. A good housing policy as far as reconstruction is concerned means, therefore, one which takes care of building the houses, planning the sites, planning and constructing the local improvements, and dealing with questions of local transit. You must deal with all these questions simultaneously, if you are to make new housing measures successful. The United States Steel Corporation and other companies and other bodies recognize that by buying and planning whole town sites for housing their employees. But there must also be a simultaneous policy of improving the dwelling that exist and a courageous policy of demolishing those that are unhealthy.

In this matter we need to employ the best architectural brains, to enquire into the most economical forms of building houses and constructing local improvements, etc.

England proposes to spend at least \$600,000,000 on new houses in three years after the war and the State will meet 75 per cent. of the loss due to expected falling in value of materials and labor during the next seven years. This will mean a national contribution of about \$188,000,000 and a local contribution of about \$47,000,000. England will simultaneously insist on the standards of private construction being raised; and will go on demolishing its slums. No less than 60,000 houses were made fit by landlords in 1913 under Government compulsion. The density of house building in England will be governed by town planning schemes, fixing twelve houses to the

acre in towns and eight to the acre in cities. Land purchase, local transit, and house building will proceed side by side. You cannot deal with the housing problem by public enterprise unless you control the land and local means of transportation. It is even more important to buy the land and provide it with local improvements and transit, under a proper town planning scheme than to build the houses. The latter is the field that can be best left to private enterprise, and \$1 spent on land and land development goes as far as \$7 spent on building.

You need to deal with these three matters simultaneously to make your public or private housing schemes successful.

Do not fear the cost of slum clearance. It is a reproductive expenditure. Liverpool has cleared 32 acres of slums and erected healthy dwellings for 12,000 people at a total cost of \$4,550,000 of which \$365,000 was spent on street widenings. Slum clearance is necessarily expensive. It involves payment of a penalty for past neglect, but it must be done.

Throughout your cities and round your suburbs potential slums are also being created today. These need to be regulated by stronger building codes. Population will be found spread over good idle land at the rate of 1 to 3 to the acre getting services of water and sewers at the expense of the city and surrounding municipalities fit for forty or fifty people to the acre—or else living in unsanitary conditions. Here it is that town planning is most needed, and the indirect attack on slum conditions must be begun. We need to spread our people—but spread them evenly, healthily and according to plan.

In addition to your natural growth of population you have to provide better conditions for your new immigrants. The increase of population in England only requires 67,874 houses, annually; in Canada we need 32,706 for a fifth of the resident population of England, and owing to your rapid growth you need 319,553 houses a year to house your increase at 5 persons to a house.

The increase in cost of labor and materials started before the war.

The dearth and scarcity of money and labor have prevented, and will continue to prevent, private builders from erecting small houses. The increase in rents, although considerable, has not yet reached the point that makes it worth while for the building speculator to invest in building, even if capital and labor were available. On the other hand, the wages of working men have not advanced in proportion to the increase that

has already taken place in rental values, so that any further increase, needed to enable private enterprise to resume building operations, is unlikely. The situation may gradually right itself, but it will take many years and meanwhile much hardship and injury will be caused and serious discontent and dissension may be created.

*The Responsibility of the Federal Government* raises a very large and difficult problem. There is, undoubtedly, a body of opinion opposed to the idea that it is the business of the Government to assist in building houses or that, if in an emergency, such Government action is necessary, then it is the duty of the State or Provincial rather than the Federal Government. I am convinced that, whatever policy may be regarded as expedient, or as most in conformity with the traditions and nature of Government in Canada and the United States, it is unlikely that any satisfactory solution of the new housing problem will be obtained, unless the Federal Government takes the initiative in promoting an active co-operation between itself and the Provincial Government and Municipalities. To make such initiative and co-operation effective, it is essential that there should be some form of financial aid given and the utmost administrative assistance that would be acceptable to the provinces.

The war housing policy of the United States has left behind it machinery which will be of great aid in developing the country, in creating a field for employment after the war, in attracting immigrants, and in improving the efficiency of the workers.

There are special reasons why the building of houses, the planning and construction of highways and the control of land development should receive further consideration by the Federal Governments of Canada and the United States. It is becoming more and more recognized that the success of both the manufacturing and agricultural industries depend on the efficiency of the worker and that the provision of good housing conditions and environment is necessary, to produce that efficiency. The building up of industries and the increase of production generally also depend on good housing conditions being provided. The permanent settlement of new immigrants in town and country and the successful colonization of the land can be promoted to a greater extent than appears to be recognized, by urban and rural housing schemes. In all these matters the Federal Government would appear to have responsibility and could give aid and

guidance which no other body—provincial or municipal—can render.

For the next year or two, we will be passing a stage of transition in connection with trade, commerce, immigration, labor and all forms of industry. There will also be changes in economic conditions from the present somewhat artificial state caused by the war. How to stabilize industrial conditions, provide employment in reproductive undertakings and spend every dollar to the best advantage in building up the country, is the supreme task of the next few years. There would appear to be no doubt that, by whatever means it is to be accomplished, the stimulation of building is one of the best methods of promoting employment and stimulating industry.

It will be particularly valuable as a means of employing men displaced as a result of cessation of industries which have been engaged in war production, and returned soldiers. Besides forming a field of employment of these classes, it will assist the returned soldier in obtaining cheaper and better shelter for himself and family in proximity to his place of employment. Under present conditions returned men will find it almost impossible to obtain suitable accommodations and this may give rise to serious discontent.

Neither the provinces nor the municipalities can deal effectively with this matter without leadership and financial aid from the Federal government. It is a problem of national proportions needing stimulus and expert guidance from the central department.

There is a danger of treating the problems of reconstruction in a piece-meal way, without sufficient regard being paid to underlying social conditions. There is also danger of treating housing as an isolated problem of reconstruction. There is probably no problem of greater importance or that more needs the co-operation of the statesmen of the country than that of housing in relation to both industrial reconstruction and rural development after the war. But it is only a part of the more comprehensive problem of development of the industrial and national resources of the country. Any scheme to ameliorate present housing conditions should be a part of a scheme of general reconstruction.

#### CONCLUSION.

I recommend:

1. That a sum of money be appropriated by the Federal Government for the purpose of assisting Provincial or State Governments to improve housing

conditions; and a further sum for the purpose of assisting in the improvement of highways and construction work in connection with the development of land for housing purposes.

2. That a Federal Development Board be appointed to administer the above fund, in co-operation with the Government departments interested in other problems of reconstruction and land development; and also with development committees or boards to be appointed in each Province or State.

3. That the Board: (a) Investigate questions of displacements of labor in relation to housing and the effect of changed economic conditions caused by scarcity of capital, labor and materials and make recommendations with regard to readjustment.

(b) Advise in connection with the securities of more complete and accurate data regarding topographical, physical and industrial and social conditions, as a basis for promoting sound schemes of housing, transportation and land development, assisting in affording employment to returned professional men, and generally promoting industry.

(c) Frame regulations to facilitate joint and speedy local action, and make reports and recommendations in respect of future policies to be adopted.

(d) Inquire into architectural, engineering, and financial problems in connection with the building of houses and the construction of local improvements and promote methods to secure greater economies by means of improved planning, standardization, or other methods.

(e) Draw up standard specifications of construction, model by-laws relating to building and sanitation, and model designs of buildings suitable for urban or rural locations, and take such other steps as may be considered desirable to promote the improvement and increase of dwellings for purposes of the industries of agriculture and manufacture.

"Have you Americans any conception of what the requirements of France will be, when the allies have won the war and our country begins its work of reconstruction?" This question was asked me a few days ago by a prominent business man of Paris, who, having been gassed, can no longer fight, and is visiting in this country, says H. H. Windsor in the *Popular Mechanics Magazine*. From what he proceeded to relate it is evident that comparatively few on this side do realize what our export trade to France is destined to become.

"For many years," he said, "our people secured their machinery, printing presses, tools, electric machinery, and lighting fixtures, etc., all from Germany. This was because German prices were lower than other countries. But now! Germany could not name a price which would induce a Frenchman to buy of her, no matter what his need. England will be busy supplying her own wants and those of her export trade, hence we are looking to your country. Our textile mills, nearly all of which were in north-east France, have long since been destroyed and the machinery carried into Germany. Our textile manufacturers are already making a new start in south-west France, securing what little machinery they can. With the end of the war this industry will be one of the first to resume, and we shall require, of textile machinery alone, over 200,000,000 francs. I could go down a list of a hundred articles whose requirements, while not so great, will in the aggregate total a vast sum. Partly because our people regard the Americans so highly, and are full of admiration for the splendid things they are doing in our country, and partly that we may know and read your language great numbers of our people are studying English, not only to be able to read it, but to speak it as well. We expect to offer such attractive opportunities, especially to constructive engineers and mechanics of all kinds, that thousands of your young men will remain in France, at least during the first two or three years of reconstruction."

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—E.S.

## As The Editor Sees It

THE twenty-second annual meeting of the Octavia Hill Association of Philadelphia, was held last week in that city. We have before commented in these columns in the work of Octavia Hill Association, and Philadelphia should be proud of an organization which is so successfully offering a solution for the need of better housing conditions. It is of particular interest that the report of the Association shows net earnings for the year of \$8,819.71. The association owns and controls 416 buildings, providing accommodations for 731 families. The treasurer showed the amount of capital stock outstanding is \$257,700, and stock amounting to \$24,725 had been issued during the year. The income of the Association from rents on its own properties amounted to \$22,623.38. Dividends on the stock of the Philadelphia Model Homes Company amounted to \$1400. Commissions on agency collections and from other sources amounted to \$6105.87.

The Association is an active agent for the betterment of living conditions in the city, and it is high time that the citizens of Philadelphia support the investigations made by such an Association and strive for the civic betterment which is its aim. According to F. C. Feld, Superintendent of the Association, "A great pile of filth and ashes all mixed up together were found a year ago near eleven houses at Naudain and Kenilworth streets in South Philadelphia, which the

Children's Aid Society received by bequest, and the matter was properly reported to the nuisance division of the Housing and Sanitation Division of Public Health and Charities. Yesterday I was at the same property and the same pile of filth was still there."

The property in question was purchased by the Association for \$10,000, and repairs and improvements when completed will cost \$11,000. The condition of the houses when purchased was described by Mr. Feld.

"Six families were living in six rooms," he said, "the water supply had been frozen for two months and there was one toilet which was out of commission. Reports were made to the various departments of the City Hall and this is not an isolated case.

"There is initiative needed by the city departments to find out conditions which obtain in the city and to see that the needed work is done. What good are laws and all this sort of stuff when we are not at the business of enforcing the law?"

Robert D. Kohn, architect of New York City and recently chief of production, housing division, United States Shipping Board, upheld the action of the State of Massachusetts in its plan for providing houses at a low cost for workers.

Through its Homestead Commission, said Mr. Kohn, within the last two years, through the money loaned by the State

at a low rate of interest out of certain reserve funds quite a number of decent houses have been provided at low cost. This State action points the way to the solution of one of our problems.

Mr. Kohn agrees with the other authorities on this great question, that proper housing conditions apply not only to the houses themselves, but to comprehensive and intelligent town-planning, always with the future growth and development of the community in view.

"Cheap money, cheap loans," added Mr. Kohn, "are really at the basis of any scheme to meet the needs of the working classes. And provision must be made for complete community life."

The Octavia Hill Association has shown what may be accomplished in the establishment of healthful and sane living conditions; the State of Massachusetts has already established a precedent in the financing of town-planning and housing developments, how long must we wait for other States to formulate some constructive policy on this vital question? If such action does not result, then one of the most valuable lessons the war has taught us will be of no avail.

"What is the first thing the war has shown us?" asked Lloyd George of England in a recent speech. The Premier answers for us:

"The appalling waste of human material in this country. There is hardly any material placed by Providence in

this country which is so much wasted as human life and human strength and human intellect—the most precious and irreplaceable material of all. I have previously said something about the figures of the recruiting officers. Those who were in charge of recruiting came to the conclusion that, if the people of this country had lived under proper conditions, were properly fed and housed, and lived under healthy conditions—had lived their lives in their full vigor—you could have had a million more men available and fit to put into the army. That is a very appalling figure, and it is not merely that. When you have not lost life you have depressed the vitality of life. There are millions who are below par. You cannot keep even animals in their full vigor unless you give them good conditions. You cannot do it with men and women, and you cannot bring up children under bad conditions. There are millions of men's lives which have been lost as a result of the war, but there are millions more of maimed lives in the sense of undermined constitutions through atrocious social conditions that you have got in consequence of the whole of the terrors of this great war. You must put that right. Put it at its lowest—all trade, commerce, and industry, they all suffer through it. A vigorous community, strong, healthy men and women, is more valuable even from the commercial and industrial point of view than a community which is below par in consequence of bad conditions. Treat it if you like not as a human proposition, but as a business proposition. It is good business to see that the men, the women, and the children are brought up and sustained under conditions that will give strength and vigor to their frames, more penetration and endurance to their intelligence, and more spirit and heart than ever to face the problems of life, which will always be problems that will require fighting right from the cradle to the tomb. That is the first problem. One of the ways of dealing with that is, of course, to deal with the housing conditions. Slums are not fit homes for the men who have won this war or for their children."

Looking at the question, then, from a purely business standpoint, does not the waste in lives, and human strength and human efficiency, produced by bad living conditions, outweigh any waste which may result from construction during this period of high prices?

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

## RETRAINING THE DISABLED MAN AS AN ECONOMIC SAVING COMPENSATION TO BUILDING INDUSTRY

BY DOUGLAS C. MCMURTRIE,

*Director, Red Cross Institute for Crippled and Disabled Men, Twenty-third Street and Fourth Avenue, New York City.*

In the past, our method of dealing with the man permanently disabled in the course of employment has been to pay the worker a pension in the form of compensation, and forget him and his injury. But the cost of disability to the building trade has not been alone in the premiums paid for casualty insurance. There has been the cost involved in the training experience, and adaptation of a skilled worker who does not return to his job, and the fitting of a newcomer to take his place.

There are three means of reducing and approaching the complete elimination of the cost of disability: first, accident prevention; second, thorough medical attention to minimize the disability resulting from the injury, and third, salvage of the remaining abilities of the worker through rehabilitation for self-support. The first of these has already received wide attention from employers and has wisely been encouraged in a financial way by casualty insurance companies and State funds. The values of the two latter have, however, not as yet been appreciated. Their energetic application would effect a tremendous saving to industry.

Many injuries from which men would completely recover in a short time under adequate and high-grade medical attention are treated for an insufficient time, or by incompetent physicians and, instead of a prompt return to work, the case at best drags along over an extended period and at worst becomes chronic or develops into permanent disability. Some States require the insurance carrier to provide but two weeks of compulsory free medical attention to the injured man. For the insurance company to take advantage of this limitation is the most short-sighted policy possible, because for every dollar saved in physicians' or hospital fees, the insurance carrier pays out later ten dollars in compensation. And what the insurance company pays is actually paid by the insuring employers in their regular premiums.

Unlimited medical attention of the highest grade should be an axiom of casualty practice. It should be insisted upon by employer and workman alike. The best outcome of any injury is to have the employee return to his job as a well man in the shortest possible time.

It is well to develop a science of dealing with cripples, but the ideal is to have fewer and fewer cripples with which to deal.

The third method of attack on the cost of disability is rehabilitation for self-support—the re-education of an injured man for an occupation which he can follow, or a process which he can perform, in spite of his handicap. The science of rehabilitation is new, and the experience in it has practically all been gained in the effort to make sound and just provision for the disabled soldier or sailor. Every country among the recent belligerents is to-day operating a comprehensive system of re-education for disabled soldiers, and is placing upon that system more dependence than upon the pension system.

Paying a man a small monthly or weekly stipend on which he is expected to live in idleness is not a very constructive method. With the breakdown of confidence in the pension system, it was realized that the only real compensation for disablement was restoration of capacity for self-support. It was further realized that very few jobs require all the physical faculties and that in the present-day variety of industrial processes, it is possible to find a job in which a man with a given type of disability can function 100 per cent. efficient. Some jobs are standing, some seated, others require walking about, some jobs at a bench working on small articles require but little strength, others involve great physical exertion. Still others do not require the sense of hearing, in others the sense of sight is not essential. Finding the future work of the disabled man, therefore, requires expert and painstaking choice, but a successful selection is possible even for the seriously handicapped. The first aim is to place the man back in a different job in his own trade or in a trade closely related. In such a job his past experience will stand him in good stead. Failing this, he can be re-trained for a different line.

The process of re-training the disabled is known as re-education, and can best be provided in a special school for crippled men. The first school of this kind in the United States is the Red Cross Institute for Crippled and Disabled

(Continued on Page 75.)

**Barrett Specification Roofs**

**Barrett Specification Roofs on Boston Elevated Railway Company's Buildings.**

*Above: Surface Subway Station, Boston Elevated Ry. Co., Andrews Square, South Boston.*

*At left: Sub-power Station, Boston Elevated Ry., Somerville, Mass.*

*At right: Transfer Station, Boston Elevated Ry., Fgleston Square, Boston.*

## The Barrett Specification provides real roof insurance —

**T**HE big Andrews Square Surface Station of the Boston Elevated Railway Company shown above is covered with a Barrett Specification Roof, *guaranteed for 20 years against all expense of maintenance or repairs.*

This protection is absolute, because it is covered by a Surety Bond issued by the U. S. Fidelity and Guaranty Company, one of the largest surety companies in America.

Both of the other buildings shown above are also covered with Barrett Specification Roofs. The Barrett Specification takes all of the gamble out of roofing a building. It affords four distinct advantages over the old methods of roof specification:

*First*—All contractors are bidding on an equal basis on a standard roof of highest quality.

*Second*—Our free inspection service (on roofs of 50 squares or more in cities of 25,000 or over, and in smaller towns where our Inspection Service is available) places on us the burden of seeing that you get just what you pay for, and that the materials are properly applied.

*Third*—Our free Guaranty Bond *absolutely protects you from roofing maintenance for at least 20 years.* Our only requirement is that the roofing contractor shall be approved by us, and that the Barrett Specification dated May 1, 1916, shall be strictly followed.

*Fourth*—You get a roof that will cost less per year of service than any other type and one that takes the base rate of insurance.

This explains why both the Transit Commission and the School Commission of Boston use Barrett Specification Roofs. They want the best and most economical roof covering it is possible to get, and, naturally, they want to be sure they get it.

*Booklet explaining our 20-Year Guaranty and a copy of The Barrett Specification, free on request. Address nearest office.*

## RETRAINING THE DISABLED MAN AS AN ECONOMIC SAV- ING COMPENSATION TO BUILDING INDUSTRY.

(Continued from Page 68.)

Men established in New York City through the generosity of Jeremiah Milbank. At this school, open to disabled civilians and soldiers alike, six trades are already being taught: artificial limb making, motion picture operating, oxy-acetylene welding, printing, jewelry work, and mechanical drafting. More

will be added as the demand develops. Graduates are already giving satisfaction in the jobs to which they have been graduated, so the enterprise has passed the experimental stage. And in the results attained with disabled soldiers abroad there is overwhelming evidence of the logic and practicality of rehabilitation.

The cost of soldier rehabilitation is being met by the United States Government and by the Governments of some of our Allies. It will be admitted without argument as desirable that the advantages of re-education be made available to disabled civilians as well, but will not the cost be prohibitive? The fact is that rehabilitation effects a reduction rather than an increase in the cost of disability to industry or to the community as a whole.

A typical case will illustrate how the saving is effected. A worker in Massachusetts was injured by a fall while working inside a submarine and his hand became permanently crippled. In due course his compensation rate was determined and he was referred to the insurance carrier to be paid ten dollars a week for a long period, with a maximum total payment of four thousand dollars. Since the disability was manifestly permanent the insurance company wrote the case off their books as a four thousand dollar loss and transferred that amount to reserve to cover the weekly payments. After the compensation had been paid nor nearly a year, a new official of the insurance company began looking over the list of men to whom the company was paying compensation. His attention was directed to the man in question and the latter was requested to call at the office of the company. The case was like many thousands of others susceptible of rehabilitation for self-support, so the insurance company official put a proposition to the man in very frank terms. "I believe that you can be trained to earn a good living. I want you to understand very clearly, however, that this proposal is to the financial advantage of the company, but I also believe it is to your advantage as well. A total

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

income of ten dollars a week is not very attractive to you and you would probably rather return to work at a good wage than remain idle. If you will consent, the company will send you to a school of re-education and see if we cannot get you back on your feet in good shape."

The injured man consented to the proposal and the company sent him to the Red Cross Institute in New York. They began to pay him not ten dollars a week as required by law; but forty dollars a week, twenty to him in New York and twenty to his wife at home. The company also paid liberally his traveling expenses in both directions. In the period of eight weeks he was re-educated in oxy-acetylene cutting and welding and returned home. He is now making not only a satisfactory wage, but twice as much as he had ever earned before the accident took place.

In the whole transaction every party at interest was benefited. The man was advantaged in that his general living standard was distinctly raised, and the necessity of working for his living could not be considered as a hardship. The company paid less than five hundred dollars for his rehabilitation and this expense in conjunction with the five hundred dollars already paid in weekly compensation during the first year of idleness made a total for the case of one thousand dollars. They were thus enabled to charge three thousand dollars of profit to the account of profit and loss. The community was infinitely the gainer in that the man, formerly an unproductive consumer, became a useful producer instead. The community was infinitely the gainer in that the man, formerly an unproductive consumer, became a useful producer instead. The community further gained in the elimination of the disabled man from the category of a prospective dependent, because while compensation might have taken care of him in a very insufficient way during the period of idleness, there would have come a time when compensation ceased and then he would have been in a desperate economic status indeed—confirmed in habits of idleness, untrained for skilled work, and without any source of support.

A more intelligent handling of disability by insurance carriers will, therefore, reduce their expense, and will thus cut the cost of casualty protection to the employer. There is needed also, however, some revision of compensation laws so that there may be definite encouragement to insurance carriers to offer opportunity of rehabilitation and definite

encouragement to the disabled man to take advantage of it. Practically every compensation case that has ever come to the Red Cross Institute has come on the day his compensation expired. For one year, for two years, or for four years the man has existed in idleness, drawing compensation, and cultivating habits of indolence. When his support was cut off, he then became interested in rehabilitation. Present compensation legislation tends to encourage the man to remain idle because his payments are reduced by any improvement in earning capacity. A revision of this practice will make for more constructive provision.

In short, the first effort should be to prevent injury, the second to minimize its permanent effects, the third—when disability has ensued—to offset its economic consequences. The execution of this complete program is not only sound humanitarian practice—it is good business as well.

#### HOW TO KILL A MASTER BUILDERS' ASSOCIATION.

1. If you receive a notice of meeting, tear it up, and
2. Swear blind you never got the notice or it was never sent.
3. Don't attend meetings.
4. If you do, then make it about every fourth, so that you can't possibly know what was done at previous meetings, and it makes it easier to plead ignorance if you break a rule.
5. If you do attend a meeting come late, and you won't hear the minutes.
6. If too wet or too dry, too hot or too cold, don't think of coming.
7. Kick if you are not appointed on a committee; and if you are appointed, never attend a meeting.
8. Don't have anything to say when called upon, but
9. Always discuss the most important Association matters in the street or over a bar.
10. If you do attend a meeting always find fault with the proceedings as well as the work done by other members.
11. If you are asked to furnish statistics to advance the claims of the Association or a brother builder, don't reply to the letter.
12. Never reply to any Association letters.
13. Hold back your affiliation or other fees, or don't pay them at all.
14. Never introduce a builder who you think would like to join the Association.

15. Don't attend dinners or any social function organized by the Association.

16. Don't do anything more than you can possibly help to further the aims and objects of the Association; refuse to use any talent you possess unless a grateful allusion is made to it from the chair at every meeting; never lose an opportunity of insinuating that "So-and-so" is evading all the rules; never praise a fellow-contractor, but always decry him, and always leave the impression that without you the Association would be in gross darkness.—*Cape Town Architect, Builder and Engineer.*

#### PERSONAL NOTES.

Conneen Construction Company, builders, formerly of 1737 Filbert street, have moved their offices to the Fuller Building, 10 South Eighteenth street, Philadelphia.

\* \* \*

Reuben Beard, architect, has opened his office at 1311 Commonwealth Building.

\* \* \*

"Hendricks Commercial Register of the United States," 27th annual edition, just issued, is of invaluable assistance to the man who buys for any business. Much time and energy is conserved by using this national purchasing guide. "Hendricks" furnishes the sources of supply of all kinds of products. Manufacturers are classified according to product. The work is most comprehensive and a great help to contractors and builders, as well as the general buying public. The purchase price, \$10.00, is nothing to the great value in time saved in procuring the names of concerns you are looking for to supply your demand. We act as agents, and upon receipt of \$10.00 will have copy mailed you. No delivery charge. Building News Publishing Company, Perry Building, Philadelphia.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

Many a man would do a better job if he didn't know about putty.—*Ex.*

## As The Editor Sees It

**R**EPORTS from the Department of Labor indicate that the construction industries throughout the country are looking forward to a readjustment of conditions in the near future and a resultant resumption of building and construction work. All indications point toward high wages and high material prices for some time to come, and it is merely a question of readjustment to these conditions. The same uncertainty and hesitancy existed in the first few months of the war, and there is no reason to believe that the conditions now will not, as then, be satisfactorily met.

"American building industries," says the statement of the Department of Labor, "will be called upon to furnish tremendous quantities of materials for European construction. If no other elements were present to keep up material prices, Europe's demand would prevent any immediate drop in them, according to the opinion of many material manufacturers and contractors. Reduced production during the war in the building materials industries, and the market curtailment—almost suspension—of private building undertakings, have fomented market conditions, which do not make for lower prices."

Of course, certain materials will be barred from this export trade, due to difficulty of shipping. Stone, for instance, which forms the foundation and cellars of most of the western European

houses, is too heavy to ship in normal times, and it is now entirely out of the question, due to the need of shipping space for shipments such as foodstuffs, etc.

"Therefore," says L. W. Alwyn-Schmidt, Director, New York Economic Service Bureau, in the *American Contractor*, "a careful selection of building materials therefore should be made, and only such should be forwarded in the near future which can be easily shipped and fill an actual want. This eliminates also bricks and similar materials which, by the way, never have formed a very suitable export material and can be shipped in normal times only with slow shipping in place of any better paying freight. Instead of these we might with advantage center our efforts on cement, timber, builders' hardware, roofing materials, and finally on all such articles which are an American specialty and which might form a valuable addition to the builders' ware generally in use in Europe.

"Cement has always formed an article of international trade and can be easily shipped. American cement no doubt will have to enter competition with the European cement mills, but it is doubtful whether these will be able to take care of the very considerable demand which is expected to come from the destroyed parts of Europe. Belgium and France were receiving most of their imported cement in pre-war times from

England and Germany. The distribution was facilitated a good deal by the very extensive net of canals connecting northern Germany and the lower basin of the Rhine, which served both the transport of English and German cement. Germany will hardly be able to supply much cement during the next year, as its labor situation is much upset by the political situation. England, on the other hand, has made great preparations to handle the French and Belgian cement business after the war, and English cement will prove a very strong competitor against the American product. Few orders for cement can be expected during the next two months, and the real business will not start in before the coming of the spring, as no building can be done in the regions in question before the return of warmer weather. This will give time to the American cement manufacturers to study the situation more closely and to see how they can be best of use. Cement mills having a surplus of cement may possibly find it to their advantage to make advance shipments to one or the other European ports, in order to be able to supply immediately when the building activity begins, which will greatly assist the future development of the business. The cement should be made available to the consumer not only in barrel lots, but also in smaller quantities, as much cement doubtless will be required by smaller builders for general

repair work, which has been much neglected during the war. This refers not only to the reconstruction work in France and Belgium, but also to many other European countries, especially the Netherlands. The business most likely will be governed by the prices for English cement.

"As far as bulk is concerned timber probably may form the largest item amongst the American supplies to be shipped to Europe. Some time ago the French Government had made an investigation of the approximate building loss in the departments Nord, Pas de Calais, Somme, Oise, Seine et Marne, Aisne, Ardennes, Marne, Meuse, Meurthe et Moselles, and Vosges, which covers 790 communes. During this time 250 French communes were still in the actual fighting zone and 2,500 others were under German occupation. From this estimate it appears that France will have to rebuild 4,680,000 cubic yards of masonry, 2,080,000 of stone construction, 543,000,000 cubic yards of brick construction. It will require 297,000 tons of lime, 1,343,000 cubic yards of sand, 513,000 cubic yards of copper work, 591,000 cubic feet of timber, 195,000 of joinery, 27,300 tons of iron frame work, 5,000 tons of builders' hardware, 91,000,000 tiles and 32,700,000 slate plates for the investigated communes only. It can, therefore, be estimated that France will require at least 1,500,000 cubic yards of timber and 600,000 cubic yards of joinery. Only a very small part of that can be had in France. The forests of France have suffered very heavily by the war. Many of the best French timber lands have been fought over during the war and have been uprooted by gunfire. Much timber also had to be cut to be used for military building and emergency constructions. So France will have to rely practically entirely for the timber part of her rebuilding supplies on foreign assistance. This has been realized already early in the war, and French agents have approached repeatedly timber interests in this country and in Canada with the intention of securing the necessary supplies. Before the war France imported timber valued at nearly \$250,000,000 every year, and Belgium required approximately an import value at \$24,000,000 to supplement its own very small supply."

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

## IMMEDIATE RESUMPTION OF BUILDING ACTIVITIES AS A NATIONAL ASSET

Chief of Division of Public Works and Construction Development U. S. Department of Labor says United States Is a "Going Concern" with an assured Future

By F. T. MILLER, DIRECTOR.

The main issue now before our country is—are we in a state of liquidation, trying to settle up our affairs, or are we a going concern?

This country has two hundred and sixty-five billion dollars of wealth; wealthier than four of the wealthiest nations of the world combined; we have \$2,500,000,000 worth of gold in this country—the greatest amount ever known in the possession of this country, and considerably more than half of the gold of the world. We are over the war. We have shown moral characteristics in accepting the draft that have enabled us to put men on the Western front in numbers second only to France, and our men have fought well.

The war is over—and we do not expect attack from anybody, but we are still wondering what we are going to do, —how we are going to get along. After the Civil War was over, when we had foreign complications and when we had but \$133,000,000 in gold against \$346,000,000 greenbacks, Secretary Sherman came out and said, "The way to resume specie payment is to resume." Payment was resumed and we did business, because the people had faith in the country.

This is the greatest, strongest, wealthiest, healthiest country in the world, and it is a country that should be doing business, and not a country in a state of liquidation; and yet, because of a psychological status, everybody is waiting to see if somebody else is going to reduce his price on something. Copper consumption is down. Iron consumption is down. The great question is one of consumption. If we do not buy, we cannot exist and do business—this is the issue.

Now, if we had the four million immigrants that this country would have received if the war had not commenced—if we had our two million soldiers home again, if adjustments had been made and if we were all working steadily in the pursuits of peace—if we had the three to five billion dollars' worth of domestic structures of which we are short, and the shortage of which is causing increase in rents (and rentals growing out of this shortage cumulatively increase the cost of every necessity of life)—if

we had these things and were all working steadily, and if there were no exceptional draft on our products from abroad, prices might again be what they used to be.

When the European war broke out we expected it to last but a few months and looked immediately for return to old conditions. In the meantime, different conditions have been arising and we still have our minds fixed on a return to the old conditions. The thought of a nation is one of an *ante-bellum* character. But conditions have come about which have changed this country far more than conditions which came about from the Civil War. We cannot turn the clock back.

When the armistice was signed in a Pullman car in France, and people tossed a lot of newspapers out of windows here, we all thought we were back to the old conditions. Many now know we are not to go back to those conditions, but it is hard to realize that we must adjust ourselves to new conditions and act promptly.

The inertia of economic events is a continuing force and we must all take the new hand of cards that has been dealt to us, familiarize ourselves with them as quickly as possible and play with them. It will do us no good to sit and look at them and hope that in some mysterious way they will change back into the old hand we had before the war.

After the Civil War we characterized people who maintained their old ideas as "*ante-bellum*." The darkies said "befo' the wah," but the majority of people in this country now are still in the mental hoop skirts and pantelettes of the before-the-war attitude of mind, and they do not fully realize the strength of the nation or the close political and economic contacts that have been brought about with the world in general, and which will influence all of our future activities.

We are not going to get the immigrants which we received formerly; prices of labor are higher in Europe than they were; prices of materials are higher in Europe than they have been for years, in some cases higher than they are here,

(Continued on Page 88.)

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Restaurant Building (alts. and add.),** 1604 Chestnut street. Architect, Charles E. Oelschlager, 1615 Walnut street, Philadelphia. Consulting architect, Paul J. Henon, 10 South Eighteenth street, Philadelphia. Owner, Cheri, Inc., care of John G. Patton, 15th and Chestnut streets. Rear addition, 4 stories, general remodeling of entire building, slag roof, tile and composition floors, steam heat, electric lighting, tile and marble work, freight elevator, hollow metal skylights, kitchen equipment. Plans in progress. Will take bids in a week.

**Stores and Apartments (15),** Frankford, Philadelphia. Architects, Lachman & Murphy, Drexel Building, Philadelphia. Owners, name withheld. Brick, 3 stories, 20x70 feet, slag roof, stone foundations, steam heating, electric lighting, tile work, yellow pine floors, ornamental terra cotta, metal bulks. Plans in progress. Architect will be ready for bids in ten days.

**Loft Building (alts.),** 729 Arch street, Philadelphia. Architect, Peuckert & Wunder, 310 Chestnut street, Philadelphia. Owners, Max S. and Morris Apt, 723 Arch streets, Philadelphia. New toilets, new bulk, metal lath (heating, electrical work, plumbing and sprinklers reserved). Architects taking bids due February 12th. P. Haibach Contracting Co., Twenty-sixth and Thompson streets; H. E. Grau Co., 1707 Sansom street; Frank I. Wintz, 1618 North Twenty-seventh street, are figuring.

**Dwelling (alts.) to Apartments,** northwest corner Fifteenth and Oxford streets. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Francis Hughes, on premises. Brick, 4 stories, changing partitions, oak floors, plastering, hot water heating extension, combination lighting and fixtures, tile work. Plans about completed. Owner will take sub-bids in a few days.

**Cantonment,** Frankford Arsenal, Philadelphia. Architect, private plans. Owners, United States Government, care of Major Huckendorn, Frankford Arsenal. Frame, 2 stories, 43x120 feet, ready roof, yellow pine floors, steam heating, electric lighting, roof ventilators. Owners taking bids due February 17th. Wm. Steele & Sons Co., Sixteenth and Parkway; F. W. Mark Contracting Co., Finance Building; Wills-Ludwick Co., 1706 Sansom street; Wm. R. Dougherty, 1610 Sansom street, and Wark & Co., 1737 Filbert street, are figuring.

**Court Building (alt. and add.),** 1131 Wood street, Philadelphia. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owner, County Commissioners, care of George F. Holmes, President, City Hall. Brick, 1 story, 30x40 feet, slag roof, composition floors, electric lighting,

metal lath, plumbing, painting. Owners taking bids due January 17th. Thomas C. Trafford, 1613 Sansom street; Mitchell Bros., 2125 Race street; Pomeroy Construction Co., 1609 Ranstead street, and E. E. Hollenback, Inc., 1804 Brandywine street, are figuring.

**Building for Municipal Court (alt. and add.),** 223 North Twenty-first street. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owner, County Commissioners, care of George F. Holmes, resident, City Hall. Brick, reinforced concrete, 2 stories, 35x21½ feet and 24x15 feet, slag roof, cement and North Carolina pine floors, metal lath, electric elevator, stone foundations, roof ventilators, metal window guards, ornamental iron work. Owners taking bids due February 18th. Thomas C. Trafford, 1613 Sansom street; Mitchell Bros., 2125 Race street; Pomeroy Construction Co., 1609 Ranstead street, and E. O. Hollenback, Inc., 1804 Brandywine street, are figuring.

**Store Building (alts.),** Fifty-second and Ludlow streets, Philadelphia. Architect, J. Wilmer Thompson, 703 South Sixtieth street, Philadelphia. Owner, name withheld. New bulk, mill work, painting, electric lighting, tile and marble work. Architect taking bids due February 12th. Smith-Hardican Co., 1606 Cherry street, is figuring.

**Church (alts.),** Sixty-third and Woodbine avenue, Philadelphia. Architect, Paul J. Henon, 10 South Eighteenth street, Philadelphia. Owner, Our Lady of Lourdes, care of Rev. James Mullin, on premises. Marble wainscoting, changing heating system, linoleum floor. Architect is sub-letting.

**Store (alt. and add.),** 110 South Fifty-second street, Philadelphia. Architect, J. Wilmer Thompson, 703 South Sixtieth street, Philadelphia. Owner, Henry Felt, Fifty-second and Girard avenue, Philadelphia. Brick and steel, 1 story, 21x27 feet, slag roof, stone foundation, electric lighting, tile and marble work, hollow metal skylights, new bulk, oak and cement floors, metal lath. Architect taking bids due February 12th. Smith-Hardican Co., 1606 Cherry street; Hogg Construction Co., 1634 Sansom street; Hasch & Co., South Front street, and B. Bornstein, 1510 North Franklin street, are figuring.

**Residence,** Chestnut Hill, Philadelphia. Architects, Folson & Stanton, 1328 Walnut street, Philadelphia. Owner, Edward R. Sorber, care of Pelham Trust Company, Pelham and Germantown avenues, Germantown. Stone and plaster, 2 stories, 24 feet x40 feet, shingle roof, stone foundations, hot air heating, electric lighting, tile work, pine floors. Plans in progress. Ready for bids in ten days.

**Residence and Garage (alts. and add.),** 2116 Venango street, Philadelphia. Architects, Magaziner & Eberhard, 603 Chestnut street, Philadelphia. Owner, A. P. Maloney, 2116 Venango street, Philadelphia. Brick or hollow tile, 1 story addition various sizes, slag roof, oak floors, heating and lighting extensions. Plans about completed. Architects will be ready for bids in a few days.

**Towers and Elevators (2),** Thirty-fourth and Pine streets, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owner, Philadelphia General Hospital, care of Department of Health and Charities, Philadelphia. Brick, 3 stories, 8 feet x9 feet, (2) elevators, hollow metal sash and skylights. Plans in progress. Architect will take bids in one week.

**Store Building (alts.),** Silver street and Germantown avenue, Philadelphia. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owner, name withheld. General alterations, flush bulks, marble work, electric lighting, new partitions, etc. Architect taking bids due in a few days. Smith-Hardican Co., 1606 Cherry street, B. Bornstein, 1510 North Franklin street, Basch & Co., 1610 South Front street, and Frank I. Wintz, 1618 North Twenty-seventh street, are figuring.

**Garage and Rear Building,** Seventh and Allegheny avenue, Philadelphia. Architect, William H. Wooters, 816 West Allegheny avenue, Philadelphia. Owner, John J. Kelly, on premises. Brick and stone, slag roof, structural iron, cement floors, mill work, electric lighting, plastering. Plans in progress.

**Residence (alt.),** Walnut lane, Germantown. Architect, William H. Wooters, 816 West Allegheny avenue, Philadelphia. Owner, C. A. Rowell, care of architect. Brick and stone, cabinet work, mill work, tile work, electric lighting, hardwood floors. Plans in progress.

**Store (alts.),** 2836 Germantown avenue. Architect, William H. Wooters, 816 West Allegheny avenue, Philadelphia. Owner, Mark Lipschutz, care of architect. Flush bulks, mill work, glazing, painting, electric lighting. Architect will take sub-bids.

**Pier,** Kenilworth street, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, 522 Bourse Building, Philadelphia. Yellow pine, Norway pine or cypress piling, steel reinforced concrete, 1 story, 547 feet 10 inches x120 feet, slag roof, ornamental terra cotta mastic floors, hollow tile, metal lath, safety treads, rolled steel sash, rolled steel skylights, kalamein and rolling steel doors, granite blocks, asphalt paving. Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

## IMMEDIATE RESUMPTION OF BUILDING ACTIVITIES AS A NATIONAL ASSET.

(Continued from Page 80.)

and the influence of the European markets on our prices must be taken into consideration.

Prices of materials in the building line have increased sixty per cent. in the face of a declining demand. Prices of other commodities have increased one hundred and nine per cent.

Former Secretary McAdoo said in substance on November 17, 1918, in instructing the supervising architect to commence building for the Treasury Department, "the normal activity of the building industry will facilitate the transition of general industry from a war to a peace basis."

The purpose of this Division of the Department of Labor is to interest the nation in public work and private construction. When figures and principles are submitted to the public, each must use his own judgment as to the prudence of his individual undertaking. We are simply helping to bring about realization in this great basic industry that conditions have changed.

During the reconstruction period the labor and materials which might otherwise be idle can be fixed through this basic industry into permanent wealth which has earning power and pays taxes. Otherwise this labor and materials will go to waste. The activity of this industry is literal *reconstruction*.

Deferred construction is a part of our war debt—the first part to be paid, because through reconstruction we are making good our impaired facilities and putting ourselves into better condition to repay the remainder of our debt.

This Division is composed of men with practical training. Their desire is to present the truth to the nation.

Information obtained is being furnished to the public and transmitted directly to parties interested.

The Labor Department stands for increased production, while preserving the efficiency of the capital value of the individual worker, as it is only by increased production that the comforts of life may be made more universal. A decrease in consumption may make them cheaper, but the comforts of life become thus less and less available to all.

All recognize that the working man would have been ground out of existence before now if it had not been for the union, but the value of the dollar received by him as wages is the value he

established by the quality of the service he renders.

It is probable that the cost per cubic foot of modern fireproof buildings, up to three years ago at least, was less than the cost per cubic foot of the old six-story, non-elevator, non-fireproof building of thirty years ago. This is because of the rapid advance in the art, the manufacture of materials in large quantities, and the more ready assembling of the component parts through standardization of forms. In the assembling of these materials there are one to two hundred skilled artisans. As inventions and improvements occur—as metal lath is substituted for the wooden, reinforced concrete for brick, and the kalamine doors for wooden doors, etc., these trades suffer successively and yet the public is benefited. In the adjustment of the incidental trade disputes over such matters occurs our greatest trouble—yet this is just the same kind of trouble which occurred in Manchester, England, on the introduction of the textile machinery, and as has occurred in every great industrial center upon the introduction of the labor saving devices and improvements, each temporarily injuring one trade yet benefiting society as a whole. Less than 10 per cent. of our labor difficulties in the building line are due to contests for wages. Home building and home owning is the basis of the strength of the nation. While the home is not a negotiable investment, history has shown that it pays very large financial returns in the increased efficiency of the family. The home-owning spirit is awakened in about 120 cities throughout the United States in which end agitation is now active.

One of the greatest factors in making home owning possible is Building Associations. These associations are unable to supply the demand for money made on them because they are dependent upon the weekly payments of their members, but they possess nearly two billion dollars' worth of securities which they desire to pool in Home Loan Banks in each Federal Reserve district, in order that they may borrow upon these collateral assets, and with the proceeds furnish home builders with the money to undertake their small projects.

There are 7,200 such institutions throughout the country. Loss is practically unknown to them. Their directors serve without compensation and are the reliable men of the community. Last year they did a business of \$1,250,000,000 at a cost of eight-tenths of one per cent.

One factor in getting ourselves out of this state of liquidation is settlement by the government on war contracts, either verbal or written. It is confidently expected that during the current week Congress will give legal sanction to the moral commitments given by officials during our war emergencies, and that thus not only a large amount of capital will be immediately freed, for general industry, but, also, the past having been closed, thought and initiative may be directed to future undertakings.

## TERRAZZO FLOORS LAID IN A. D. 900.

A writer by the name of Sagredo, states an exchange, in referring to building construction in Venice, tells how Venetian pavement—today referred to as terrazzo floors—was laid. In A. D. 900 the usual method was to lay down a floor of heavy planks, upon which a thick layer of mortar and small pebbles was spread out and beaten down to a hard surface; upon this again a second layer of cement mixed with pounded bricks was spread, and this was beaten with heavy wood beaters till it was perfectly hard and even. It was from this beginning that the so-called "Venetian pavement" soon developed. For rich people caused small pieces of colored marble, and even mother-of-pearl, to be set into the cement of the second layer, which was then no longer beaten, but rolled with a ponderous stone roller and then rubbed down with a smooth stone and sand and water, and at last polished to a brilliant surface. So the roller for finishing concrete pavement is not so much of an innovation after all.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

## As The Editor Sees It

THERE is no doubt existing in the minds of the prominent men of the country as to the importance of the construction industries in piloting America through the days of the reconstruction period. If, however, the plans for construction of public works, great office buildings, schools, roadways, and all other necessary buildings, remain only as plan for any great length of time America will have lost her great opportunity.

America stands today as a great creditor country, with unlimited possibilities for foreign trade; but, if the wheels of industry are not set in motion here at home; if the money available is not put in circulation, the country may have to realize that this time it is too late.

In order that the best results may be obtained; that the country may indeed take advantage of the opportunity knocking at her doors, the Department of Labor, through its Division of Public Works and Construction Development, is enlisting the co-operation and support of many Governors and Mayors in stimulating local and private initiative in the industrial readjustment.

Recent correspondence between State and municipal executives and the Information and Education Service of the Department discloses an enthusiastic approval of aims of the recently-created Division of Public Works and Construction Developments, a branch of the Information and Education Service,

which has been placed at the disposal of State, municipal and private interests desiring information on industrial conditions.

Governors Charles H. Brough, of Arkansas; Marcus H. Holcomb, of Connecticut; Sidney J. Catts, of Florida; D. W. Davis, of Idaho; Frank O. Lowden, of Illinois; James P. Goodrich, of Indiana; W. L. Harding, of Iowa; Henry J. Allen, of Kansas; Emerson C. Harrington, of Maryland; Calvin Coolidge, of Massachusetts; Theodore G. Bilbo, of Mississippi; Frederick D. Gardner, of Missouri; S. R. McKelvie, of Nebraska; Alfred E. Smith, of New York; O. A. Larrazola, of New Mexico; Lynn J. Frazier, of North Dakota; James M. Cox, of Ohio, are among the chief executives who are in touch with and interested in the work of the Department of Labor in stimulating public construction work.

Governor Frazier, of North Dakota, advises the Division of Public Works and Construction Developments his State now proposes "a permanent industrial commission shall undertake a program of public works and of State industries together with a special drive for home building and farm improvement." Governor Withycombe, of Oregon, writes that his State has a comprehensive road-building program for this season which will employ thirty-eight hundred men. In all States where Legislatures now are in session the subject

of expediting public work and encouraging private building is being discussed, special attention being given to the possibilities of this public work as a stimulus to industry and its effect on the labor situation.

In his message to the California Legislature, Governor Stephens emphasized the importance of immediate work on public undertakings in the following language:

"Immediate employment for our returning men may be provided by pushing forward, with utmost speed, the completion of the State highways, for which the people already have voted bonds. On this necessary work employment can be found for every California soldier who does not secure work immediately upon his return."

With reports from the industrial centers showing an increase in the labor surplus, the Department of Labor submits it is prudent for States and municipalities to be devising a way to do what Governor Stephens says road building will do in California—provide employment for every returning soldier until industry gets back to normal.

Hon. Ernest Lister, Governor of Washington, in his message to the State Legislature, made a statement of the industrial problem which is very similar to the representations now being made by the United States Department of Labor. He said:

"The problem of readjustment has

been discussed by many persons solely on the basis of providing properly for and furnishing employment to the returning soldier. That portion of the problem involves our sense of honor. It is imperative and primary, and must have first attention. But the bringing about of such a result is only a partial solution of the whole problem of national welfare. In addition to approximately 4,500,000 men who entered the military and naval establishments proper, there are many additional millions who became a part of the great war-time industrial army engaged in the manufacture of arms, ammunition, clothing and in countless other lines of war activity. Many of the plants engaged in such production have already closed down; others have materially reduced their working forces. For the future well-being of our State and Nation it is absolutely essential that those who were employed in war industries and are now or will soon be without employment, be promptly provided for.

"Most of the men who put on the uniform were promised the return of their positions by their employers upon their discharge from the army. Those promises should not now be forgotten, nor ought we to overlook the fact, in keeping them, that many persons who filled the positions during the absence of the soldiers will presently find themselves out of employment.

"Speaking from the standpoint of the State, I believe it is our duty and responsibility so to adjust conditions that there will be employment available in the State for every able-bodied person willing to accept it.

"All of the responsibility for furnishing employment should not be shoved over upon the government agencies. It is true that the Nation, State, counties, municipalities and other political subdivisions can assist greatly in handling the problem. But it is equally true that the investor who had contemplated the erection of a business building, the individual who has desired to erect a new residence, the manufacturer who intended improvements in his factory, all of whose plans were delayed by war conditions, ought now quickly to so arrange their affairs that they may proceed with these contemplated improvements and thus aid in providing employment for those who desire and need it. I sincerely hope our people will not overlook this individual responsibility. They should not expect the entire problem to be worked out through public improvements that may be undertaken, for if this be the case the time will come when public work will cease and the labor problem will remain unsolved."

**W**HAT is holding back building and construction work?

More than five hundred opinions on this question have been received in the last two weeks by the Information and Education Service of the United States Department of Labor. Many building authorities blame Congress, others charge the financial interests of the country with responsibility. In the central west freight rates are said to be exerting an injurious influence. In the main, high costs of materials are held to be the chief obstacle.

"Don't expect private capital to build merely for the sake of furnishing jobs for workmen," writes a well-known architect from Buffalo. "That is the obligation of the government, be it local, State or national. Let public works be started at once for the benefit of the public. The cost will be high and the public will have to pay the price, but the public will reap the benefit in the reduction of unemployment, the absorption of the products of many industries and the use of many works of which there is great need."

From Passaic, N. J., comes the following statement: "I am greatly hindered in progress of this work by not being able to procure loans by ways of mortgage, in large amounts, say, in the neighborhood of \$150,000. The banking institutions and mortgage companies are making only small loans around here, and even where there is ample security will not consider investing a large amount of money in one place."

Labor conditions and demands are held to be unfavorable to immediate building operations by many of the authorities writing to the Information and Education Service. An architect, writing from Lincoln, Neb., makes the following statement, typical of the complaints along this line:

"Construction work in these parts is now and has been impeded not a little, due to the unreasonable demands of labor not only for exorbitant wages, but more by the fact certain very undesirable trade rules are being enforced by labor organizations, which run up the cost of doing work enormously."

Many of the contractors and builders in the central west assert freight rates are the chief trouble. Typical of these arguments is the following from Greenville, Ohio:

"We have no complaint to make in the matter of securing credits, building materials and labor. It is true that wages are quite high and yet not prohibitive. The greatest detriment to our industry through the central west is prohibitive freight rates on sand and gravel. It is not only threatening to destroy our industry, but at the same time it is impeding

highway construction and other building projects which demand a high grade of these basic materials."

Lack of co-operation on the part of financial interests seems to be the outstanding obstacle in New York. One of the best authorities on the building industry in New York City sums up the situation there in this fashion:

"We have in the United States serious difficulty owing, principally, to the unwillingness of financial interests to co-operate in building projects with the material and labor market in its present condition. We are working on a total of nine industrial projects involving approximately 6,000 workmen's homes, to be carried out by private interests in various important industrial centers, but in each case we are hampered by the building loan situation. The only definite work we expect to carry out without delay is located outside of the United States."

From St. Louis, Mo., a well-known architect writes: "I am firmly convinced that the one thing the building public wants to know is the cost of building today as compared to the next three to five years. If they could be assured that the cost will not drop within that time there would be a tendency to proceed with the needed work."

As for the last question the Information and Education Service of the Department of Labor, through the Division of Public Works and Construction Development now is seeking authoritative information as to what can be expected in material prices for the next five years. While the investigation lacks completeness at this time, no definite conclusions may be stated. Many eminent building and material authorities, however, insist that no marked decrease in material prices may be expected for the next five years. They assert with some positiveness that pre-war prices on building materials will not be re-established for several years, if ever. These assert that persons who delay building in the hope of marked reductions in building costs probably will be disappointed and will have denied themselves the use of needed property and the revenues which would be derived therefrom.

In response to the Department of Labor's inquiry as to future rates on building and construction materials, the United States Railroad Administration asserts there is to be no general thirty per cent. advance on freight rates for sand, gravel, crushed stone and slag. The rumor that such advances were contemplated was arousing anxiety in the central west. Under date of January 20 the Railroad Administration put out a circular which says: "There is no foundation

### AS THE EDITOR SEES IT.

(Continued from Page 92)

for the report that the Railroad Administration has given or is giving any consideration to any increase in present basis of rates."

The Department of Labor points out that building, being a basic industry, will stimulate general business and is, therefore, very vital to continued financial prosperity. The national economic loss resulting from the idleness of thousands of men cannot be permitted and its injurious effects escaped. Present building costs are not so high that they equal in the aggregate the wealth the country loses through the idleness following in the wake of building stagnation. Homes are needed, business quarters are needed, public works are needed! The United States is the wealthiest country in the world! The most reliable authorities in the country assert that unprecedented prosperity is ahead! Why longer delay the revival of building?

**W**HILE in Washington, Congress is investigating Bolshevism and the United States Department of Labor is issuing bulletins on strikes and labor surplus, Indiana is preparing to fight both radicalism and unemployment through a home-building and home-owning campaign.

H. V. Haymaker, who, as a representative of the United States League of Building and Loan Associations, is co-operating with the Information and Education Service of the Department of Labor in investigating and stimulating building and construction work, brought to Washington the first word of the Hoosier strategy. On his return from Indianapolis, Mr. Haymaker said:

"I shall not be surprised if Indiana makes a remarkable showing this year in

a campaign against radicalism and unemployment through home-building and home-owning. In his address before the annual convention of the Indiana League of Savings and Loan Associations in Indianapolis, President W. B. Reed insisted that the cure for both these menaces was homes and more homes. Reed's appeal for a State-wide campaign for home owning met an enthusiastic response, and out of it will come, I believe, a State-wide home-building drive that will have the encouragement of the State and municipal officials. The effect of such a campaign is bound to be profoundly beneficial for the home-owning man in every community takes the responsibilities of citizenship seriously and is not prone to quickly take up untried social and political theories and experiments."

While the figures are by no means complete, data obtained by the Division of Public Works and Construction Development of the Information and Education Service clearly indicate a revival of home building in Illinois, Indiana, Iowa and Ohio. Activities in this field not yet are normal, but from week to week an increase is shown, indicating a growing confidence on the part of private building interests.

All authorities in the building industries agree there is a pressing demand for residential buildings. The Department of Labor reports show a steadily increasing labor surplus. With the Department's figures may be considered Frank Morrison's statement. As secretary of the American Federation of Labor, Mr. Morrison's estimate is significant. He says there are 500,000 men now out of employment in the United States. There is money, and America has come to be the wealthiest nation by far in the world.

With these elements favorable to building and construction work, the results of the investigation of the Division of Public Works and Construction Development as to why building is not being resumed more rapidly is interesting. High prices for material and the reluctance of banks to make loans appear to be the two large flies in the ointment.

A concise statement of the situation as it appears to him is made for the Information and Education Service by Mr. William M. Garland, of Los Angeles, who now is in Washington. Mr. Garland is President of the National Association of Real Estate Boards, and, since March, 1918, has been in Washington co-ordinating the work of his association with the efforts of various government departments. Mr. Garland says:

"I am especially pleased that the Secretary of Labor is taking an active inter-

est in stimulating co-operative endeavor on the part of laboring men, industrial associations and industrial professions to bring about a much-needed resumption of building activities.

"Many members of the National Association of Real Estate Boards specialize in building and selling houses, and, by reason of an acute housing situation in many cities, were actively engaged in building operations until about a year ago, when the Secretary of the Treasury made a statement that all building not necessary to war activities should cease.

"Since the armistice was signed the housing demand has increased. There is a desire on the part of real estate men to resume operations, but they find everywhere a lack of funds for building purposes.

"In my opinion the resumption of building is one of the most important things to be encouraged during the readjustment from a war to a peace basis. It will be the means of employing thousands of skilled artisans, take care of the demand for homes, and develop a spirit of real Americanism throughout the United States.

"In addition to home building there are many industries which can now meet their requirements only by increasing their buildings. A large amount of municipal and Government building is needed and has long been delayed.

"I also heartily favor a Federal system of highways, extending from Coast to Coast and from Canada to the Gulf of Mexico. These should be under Federal control to insure proper maintenance and speedily should be gotten under way.

"Realtors, meaning members of the National Association of Real Estate Boards, are anxious to do their share toward a revival in building, believing that conditions are favorable and that delays are fraught with serious possibilities.

"If the Government will initiate this movement, by starting the numerous buildings throughout the country which were stopped by reason of the war, it will have a marked influence upon municipal and private building, with realtors, contractors, building supply houses and hundreds of thousands of artisans immediately becoming active by reason of the resumption of building, it will be possible for all these citizens to subscribe liberally to the Victory Liberty Loan, which is announced for the latter part of April.

"'Own Your Own Home' is a popular sentiment; it is distinctly an American propaganda. I believe that the encouragement of home owning and general

building now will give an impulse to a general business revival everywhere. The one result can be no other than to establish happiness and contentment, and these, after all, are the foundation stones of the Nation and the inspiration of loyalty to the Flag."

### CONCRETE FOR INDUSTRIAL HOUSING

"Concrete houses fit in admirably with any landscape scheme," says the Portland Cement Association in a bulletin on "Concrete for Industrial Housing." Continuing, the bulletin says: "Good exterior appearance depends only upon architectural design and workmanship. Fireproof concrete houses help to reduce the cost of living. Insurance costs are lowered. Where industrial communities are developed with concrete improvements throughout, the neighborhood assumes a truly permanent aspect. Concrete streets and alleys insure easy access for fire departments. Concrete paving, front and back, makes utmost cleanliness of surroundings possible.

"Cost of keeping concrete-improved communities clean is considerably lower than that required for the unpaved, poorly-built district. Peace of mind is a valuable return secured from permanent, fireproof concrete improvements. It cannot be reduced to dollars and cents, but most certainly increases the earning capacity of individuals.

"There is not an instance where industrial housing has been worked out with particular reference to the comforts of those most interested—the workers—that their self-respect and general efficiency have not greatly improved. Today the inducement of high wages without attractive home surroundings will not foster contentment in the workingman with his position. No matter how dirty his work may be, he wants to keep himself and his home surroundings clean. He has learned to appreciate and value attractive, comfortable, modern, sanitary quarters. He, as well as his employers, realize that these are conducive not only to his personal efficiency, but to his health and general welfare. The concrete house makes these ends attainable.

"For the untrained, ignorant foreign laborer who has not learned the value of these things, the concrete house is still the solution. He is exceptionally difficult to provide for because by habit due to lack of proper environment he is likely to be uncleanly and destructive in the use of whatever home he may occupy. He can-

not afford to pay much rent, so the housing provided for him must consider a type of construction which is of low upkeep. He must be housed in a home that will provide for his general welfare as regards sanitary appointments and comfort, and also in one that will withstand the general abuse to which in his ignorance he may subject it.

"Several distinct types or systems of construction have been developed for building concrete houses. Briefly these are as follows:

"1. Walls, partitions, floors and roofs of monolithic concrete construction, reinforced where and as necessary. Such houses are built by depositing the concrete mixture into previously erected forms of wood or metal.

"2. So-called unit systems, which mean that slabs constituting walls and partitions, also columns and beams, are manufactured or precast at a place or in a plant arranged for the purpose, and after the units have been properly hardened they are brought to the building site and set in place in a very short time and at small expense. Walls, partitions, floors and roofs may be solid or hollow.

"3. Walls of concrete block or similar units, with partitions, floors and roof as in the preceding system. Walls, partitions, floors and roofs may be solid or hollow.

"4. A metal frame, resembling that used in a house built of wood, to which metal lath or fabric is fastened and the exterior covered with portland cement stucco. Metal lath is also attached to this frame on the interior, which is plastered with ordinary plaster. Partitions may be of metal frame and lath, like the exterior walls, or of hollow cement tile or other fireproof partition material. Floors and roofs may be solid slabs of reinforced concrete or may have metal joists, covered by thin reinforced concrete slabs. Metal lath is attached underneath the joists, then plastered.

"Hollow walls in concrete houses, regardless of how they may be secured, are quite desirable, since the air space so produced protects the interior of the house against sudden or extreme changes in outside temperature—contribute to keeping the house cool in summer and make it easier to heat in winter."—*"The Architect and Engineer."*

Advertising is nothing more nor less than good salesmanship reduced to print. The business man who can put "sales talk" into type has learned the cardinal principle of good advertising.

Second Class Matter

## As The Editor Sees It

CONSTRUCTION work of all kinds, as a means of setting the wheels of normal industry again in motion, and as a solution of the non-employment problem which confronts us with the cessation of war industries, is more strongly urged upon us day by day. Progress in this direction is slowly but surely being made, and we feel sure that after these first few months of transition from war to peace are gone through, building in all its forms will be revived.

Hesitancy in building on the part of many is due to the uncertainty of labor and material prices during the next few years. At present the Department of Labor is seeking authoritative information as to what can be expected on material prices for the next five years. The report is not yet complete, but all indications point to a high level of prices for materials and labors for several years come. "To build now," says "Realty," "in the face of the current high prices of all materials which enter into the construction of a building and the high wage rate of the labor required to put them together or to delay building until a time when normal conditions shall have brought these prices down again is one of the great questions that confronts the thoughtful industrial manufacturer at this time.

"That there is a great and rapidly growing need for new and modern factory buildings no one will question. It is true that great numbers of buildings were put up during 1915 and 1916, but

these were practically all of a very specialized nature, built mostly for the purpose of filling rush orders for munitions, etc., from the Allies. During 1916 and 1917, however, the total number of new industrial buildings constructed was way below the normal, even after considering the great amount of money which was spent directly by the government and that which was used to build buildings for the purpose of filling government orders.

"During both of these latter two years there were great numbers of necessary industrial buildings and other structures projected, but, on account of the shortage of funds due to government financing and other equally good cause, actual construction was postponed, and then, in 1918, the stringent restrictions placed on private construction by the War Industries Board caused a further reduction in the amount of actual building, other than direct government work, that was done.

"In addition to the great amount of actual building construction that is about to be launched there is a great amount of other construction that must be undertaken without delay. This includes a tremendous mileage of trunk and local highway construction, bridges for highways and railways and all kinds of railway construction. These other kinds of construction, however, call for many of the same kinds of labor that is employed in building construction, as well as many of the same kinds of materials.

"It is therefore apparent that the pros-

pect, desirable as it might be, for cheaper prices on building materials and labor, is not very bright.

"A study of the past history of the building industry gives but a slight hope of any great reduction in building costs. While the hourly wage rate of unskilled labor has fluctuated considerably during past years the upward variations have always exceeded the downward variations, and the hourly wage rate of the principal classes of skilled building workers has shown a practically continuous upward trend coupled with the continued lessening of the number of hours worked per week. It is unlikely that any marked reversal of this tendency will take place in the near future. In fact, if the average of all building costs were plotted as a curve, it would show a series of waves, the crest of each new wave rising far above the previous one but the trough of the new one always but a little below the crest of the preceding one.

"Start building today."

From some quarters comes the complaint that money is very difficult to obtain and banks are willing to advance only small sums for new building work. A plan to offset this condition has been worked out by the Department of Labor and the building and loan associations of the United States. The plan is in the form of a bill drafted along the lines of the present land bank act of New York and will make negotiable the loan associations' assets of \$2,000,000,000.

Leaving out all other features of the

question from the standpoint of making available almost \$2,000,000,000 for long-time loans on dwellings, the Department of Labor is convinced the Federal home bank project would be beneficial. The building and loan associations the country over are getting behind this agitation, and it is now certain that the next Congress will be asked to establish a system of Federal home loan banks, much like the Federal farm loan bank system, in which the building and loan associations may find a way to make liquid a large part of their first real estate mortgage assets.

\* \* \*

**T**HE co-operation apparent among organizations and the Government to set the building wheels in motion is most encouraging, and we must not be discouraged if the great necessary readjustment to conditions does not take place over night. Slowly and surely the cogs are being fitted together and

already the building outlook is showing signs of improvement. According to figures compiled by Bradstreets, there is revived activity in 132 cities in the United States.

In the cities covered by the survey 11,217 permits were issued in January, revealing a gain of 48 per cent. over January, 1918, and the value of the work permitted was \$20,721,629, a gain of 9.2 per cent. over December, 1918, and a decrease of only 9.2 per cent. since January, 1918, which month showed a decline of 53 per cent. compared with January, 1917.

In commenting on these facts Bradstreet's says: "That the corner has been turned in the building trade, and that, by the way, in a midwinter month, is indicated by the returns from 132 cities for January. The improvement, it is true, is slight, but that January should show any gain over December is a notable feature.

## THE LARGER ASPECT OF HOME COMMUNITIES

By PAUL R. FROST

Many creditable attempts are being made throughout the country to establish pleasant communities of homes. Land companies frequently undertake the development of large suburban tracts sometimes going to great length to follow the best precedent in scientific land division. Such efforts under judicious management are seldom regretted and usually bring their multiple returns. We have their results in sections of Brookline, Mass., carefully developed under private control, in sections of Lake Forest outside of Chicago, in such foremost experiments as Roland Park, Baltimore; Myers Park, Charlotte; Forest Hills Gardens on Long Island and in numerous residential communities, parks and suburbs well planned under private land companies in many of our rapid growing American cities.

The efforts in this direction point indeed to a wide-spread national impulse with definite relation to the recent business development. It is often said that business and residential development proceed in alternating cycles; first the establishment of sources of income, then expenditures on home and living conditions. Our immense material prosperity and unprecedented control over natural resources means inevitably higher standards for living conditions. It is well to ask just what constitutes homes and home communities of durable satisfaction and to question wherein these vig-

orous, well-intentioned efforts are achieving the best results.

I have outlined ten headings which would cover the essentials for an ideal development.

1. Adequate survey as the fundamental basis for plans.
2. Reservation of public lands, playgrounds, open spaces, parks.
3. Subdivisions into blocks of well dimensioned lots.
4. System of paved roads with sidewalks made up from one or more of the three road types, main, secondary or primary.
5. Car service approaching within two blocks of every lot.
6. Separate storm and sewer drains, water, gas, electric light and telephone prearranged and located underground.
7. Appropriate sights reserved for public buildings and for community centers.
8. Property carefully restricted.
9. Architecture controlled.
10. Detailed planning for all roads, parks, street intersections and private property.

It is obvious that all subdivisions do not observe all the foregoing conditions. We have those where a fundamental survey is not prepared, where roads are not nicely adjusted to the topography, where, like a misfit garment, they never seem quite in place. In this case drainage often presents problems and grading

on individual lots and roads is frequently unsatisfactory. All of these matters, together with the subdivision into well dimensioned lots have to be taken together and can be settled with greater eventual economy if considered at the outset on the basis of an adequate survey.

One of the most important matters is the way we make up our system of roads from the three types, main, secondary, or primary. In spite of the cost of paving, the developers of a residential community may be tempted with the wide street. If the tract is really extensive, covering several miles, it may be necessary to lay out a central artery carrying traffic to the neighboring town and so planned that it should bring a car line within easy distance of every house lot, possibly within two blocks. Whether the tract is extensive or not, in any ideal residential community most of the lots should be away from the main arteries of traffic, should be on quiet, secluded roads where there would be no occasion for the passing of any vehicles not for the use of the residents. Such roads it is possible to design very simply to have their paved areas but sixteen to twenty-four feet wide, to have their walks of the simplest nature running through or bordered with turf and to have them terminate as far as traffic goes in blind ends. In this direction we have not even begun to realize what we might in clustered groups of homes on narrow grassy lanes as remote from the forced mechanical environment of the main streets as though they were miles instead of a few blocks distant.

The advantage of separate storm and sewer drains of water, gas, electric light and telephone systems, all arranged in advance and placed under ground is apparent. Any investigation of the haphazard development the constant piecing and repairing of these systems as carried on hitherto almost universally in our cities and suburbs will show the opportunity for sweeping economies in working with a carefully prearranged plan.

These matters all largely relate to the convenience of the development and are already accepted as standard modern improvements, yet there are others without due regard for which a development might fail to have any durable success. What we should do is to plan our land and build our houses so that they will be good not only while some passing fashion approves but so well that generations hence they will still be in favor. This means that property should not be restricted in regard to the minimum cost of houses and their placing on the lot, but it means that architecture should be controlled. This I admit is one of the

(Continued on Page 112.)

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residences (12)**, Sixty-fifth and Upland streets, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, name withheld. Brick, 2 stories, 15x46 feet, slag and tin roof, maple floors, stone foundations, hot water heating, electric lighting, tile work. Plans in progress.

**Towers and Elevators (2)**, Thirty-fourth and Pine streets, Philadelphia. Architect, Philip H. Johnson, Presser Building, Philadelphia. Owners, Philadelphia General Hospital, care of Department of Health and Charities, 584, City Hall, Philadelphia. Brick, 3 stories, 8x9 feet, (2) elevators, hollow metal, sash and skylights. Owners taking bids. Hogg Const. Co., 1634 Sansom street; F. G. Stewart, 1619 Sansom street; Standard Const. Co., 1713 Sansom street; Pringle Borthwick, 8018 Germantown avenue; Wm. Linker Co., 831 Cherry street; W. W. Anstine & Co., 1218 Filbert street; Mitchell Bros., 2125 Race street; Monaghan & Losse, Inc., 3016 Chestnut street; Bowden Const. Co., Presser Bldg.; M. H. McCloskey, Jr., 1620 Thompson street; F. W. Van Loon, Denckla Building; Robbins Cont. Co., Lafayette Building.

**Bulkhead Shed (alts.)**, between Piers 38 and 40, South Wharves, Delaware River. Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Decks and Ferries, care of George S. Webster, Director, Bourse Building, Philadelphia. General repairs to bulkhead shed between Piers 38 and 40 feet and inshore end and north side of Pier 40. Owners taking bids, due March 4th, 1919, at noon. Plans and specifications may be obtained at 552 Bourse Building, Philadelphia.

**Track Laying, Grading and Sub-Structure**, Spec. 3775, Philadelphia Navy Yard, \$200,000. Architect, private plans. Owners, United States Government, care of Department of Public Works, Navy Yard, Philadelphia. Steel and concrete, sub-structure for steel storage racks. Owners taking bids due March 3d, at 11 A. M. Hughes-Foulkrod Co., Commonwealth Building; Thos. Reilly, 1616 Thompson street; Wark & Co., 1737 Filbert street, and Geo. F. Pawling Co., 1432 South Penn Square, are figuring. Deposit of \$10.00 required.

**Garage and Apartments**, Sixty-fifth and Greenway avenue, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, name withheld. Brick, semi-fireproof, 1 story, 80x200 feet, (2) apartments second floor, 28x60 feet, slag roof, stone foundations, steam heating, electric lighting, cement and yellow pine floors, hollow metal skylights, cement hardening. Plans in progress.

**Factory (add.)**, Twenty-third and Sedgley avenue, Philadelphia. Architect, Addison H. Savery, Stephen Girard Building, Philadelphia. Owner, Tasty Cake Baking Co., on premises. Brick, 2 stories, 30x70 feet and

25x30 feet, slag roof, cement floor, metal latr, hollow metal skylights, fire doors, roof ventilators (heating, electric lighting and plumbing reserved). Plans in progress.

**Dwellings (10)**, Green lane and Broad street, Philadelphia, \$33,000. Architect, private plans. Owner, John Janke, 6295 North Broad street, Philadelphia. Brick, 2 stories, (8) 16x28 feet, 13x43 feet, (2) 16x48 feet, slag roof, stone foundations, hot water heating, electric lighting, hardwood floors. Owner will build.

**Apartment House**, Philadelphia. Architect, private plans. Owner, name withheld. Brick, 3 stories, 24x90 feet, steam heating, electric lighting, slag roof. Ketcham & McQuade, 1029 Brown street, are taking sub-bids.

**Dwelling (alt.) and Stores (6)**, Southwest Corner Broad and Snyder avenue. Architect, Charles S. Parker, 5018 Schuyler street, Germantown. Owner, Miss A. Florence Yerger, Colonial Trust Building. Brick, 3 stories, 18x60 feet, stone foundations, metal latr, metal ceiling, electric lighting, hot water heating, tin roof, ornamental iron work, tile work, cement work, store fronts, plumbing, plastering, painting. Owner has received bids.

**Parish House**, Eighty-fifth and Gibson avenue, Philadelphia. Architects, Bailey & Bassett, 421 Chestnut street, Philadelphia. Owner, St. Cyprian Parish, care of architects. Stone and brick, 1 story, 61x50 feet, stone foundations, slag roof, cement floors, ventilators, iron work, waterproofing. Architect has received bids.

**Residences (28)**, Marlyn Road and Malvery Road. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner's name withheld. Brick and stone, 2 stories, 16x42 feet; garages in 4 corner residence, slate, tile and slag roof, hot water heating, oak floors, combination lighting, tile and marble work. Plans in progress. Ready for bids in a week.

**Residences (23)**, Sixtieth and Columbia avenue, Philadelphia. Owner's name withheld. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Brick and stone, 2 stories; garages in basements, 16x48 feet, slate, tile and slag roof, oak and cement floors, hot water heating, combination lighting, tile and marble work. Ready for sub-bids in one week.

**Residences (17)**, Ninth and Loudon streets, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, H. C. Irvin, 1121 Walnut street, Philadelphia. Stone, brick and stucco, 2 stories, 16x40 feet, slag and composition shingle roof, oak and yellow pine floors, stone foundations, hot water heating, electric lighting. Plans in progress.

**Residences (97)**, Torresdale avenue, Magee, Van Dyke and Hellerman streets. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, James S. Larzelere, 245 West Wyoming avenue, Philadelphia. Brick, 2 stor-

ies (33), 16x36 feet, (64) 16x30 feet, shingle, tin and slag roof, stone foundations, hot air and hot water heating, electric lighting, yellow pine floors. Owner is ready for sub-bids.

**Service Building**, Broad and Mellon streets, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Samuel Gorson, 238 North Broad street, Philadelphia. Brick, 2 stories, slag roof, reinforced concrete floors, steam heating, electric lighting. Architect taking bids, due March 3rd. Smith-Hardican Co., 1606 Cherry street; F. B. Davis, 240 North Sixteenth street; F. A. Havens Co., 845 North Nineteenth street; B. Bornstein, 1512 North Franklin street; Wm. R. Dougherty, 1610 Sansom street, are figuring.

**Factory**, 1715 North Tenth street, Philadelphia. Architect, H. B. Weldon, 1606 Cherry street, Philadelphia. Owner, J. E. Sjostrom, Inc., 1715 North Tenth street, Philadelphia. Brick and steel, 3 stories, 68½x102 feet, slag roof, cement and pine floors, stone foundations, hollow tile, metal latr, rolled steel sash, fire and kalamein doors, metal window guards, ornamental iron work. Owners taking bids, due March 1st. Smith-Hardican Co., 1606 Cherry street; E. C. Durell, 1718 North Twenty-fourth street; Monaghan & Losse, Inc., 3016 Chestnut street; Wm. R. Dougherty, 1610 Sansom street; Ketcham & McQuade, 1029 Brown street; Thos. C. Trafford, 1613 Sansom street; Raith Const. Co., 304 Master street; Hogg Const. Co., 1634 Sansom street; E. E. Hollenback, Inc., 1804 Brandywine street, are figuring.

**Garage**, 512-31 North Orianna street, Philadelphia. Architect, Carl P. Berger, 1416 S. Penn Square, Philadelphia. Owners, Northern Liberties Co., care of architect. Brick, mill construction, 1 story, 78x106 feet, slag roof, cement floors, steam heating, electric lighting. Plans in progress. Ready for bids in two weeks.

**Bath House**, 977-79 North Seventh street, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, Samuel Bershad, 975 North Seventh street, Philadelphia. Brick, concrete, terra cotta and tile, 2 stories and basement, 32x82 feet, slag roof, concrete and tile floors, metal walls and ceilings, fire tower, wire work, enameled brick (plumbing, heating and lighting reserved by owner). Architect has received bids.

**Residence**, Queen Lane Manor, Philadelphia, \$7,000. Architect, private plans. Owner, J. Morgan Lister, 5612 Germantown avenue. Stone and brick, 2½ stories, slate roof, parquet and yellow pine floors, tile work, electric lighting (plumbing and heating reserved by owner). Owner taking bids, due March 1st. Wm. J. Gruhler Co., 219 East High st., Germantown, are figuring.

**Garage (alts.) to Store**, Broad street, Bethlehem, Pa. Architect, private plans. Owner,

### "Sold but not Delivered"

"Why did the building contractor for the South Side operation fail?" the bank president was asked.

"Because he was two months late in finishing the job, and the penalties ate him up."

"Labor troubles?"

"No, he couldn't get the lumber on time."

It's an old story. Wise contractors know that it pays to buy of a concern that has a reputation for delivering promptly the lumber that it sells.

**Apartment House,** Baltimore, Md., \$25,000. Architect, W. O. Sparklin, 1402 Fidelity Building.

#### INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 17, 1919. Sealed Proposals will be opened in this office at 3 P. M., March 25, 1919, for remodeling of the United States Post Office, Court House and Custom House at Providence, R. I. Drawings and specifications may be obtained from the Custodian or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

## PERMITS FOR Alterations and Additions

O is the abbreviation for owner. C is for contractor.

### Philadelphia

Dwelling, 3942 Spruce street, \$610. (O) Miss Laura W. Loby, on premises. Repair fire damage. (C) John Duncan, 920 Walnut street.

**Service Club,** 1616 Master street, \$1,800. (O) Jewish Welfare Association, on premises. Porch enclosure and overhanging bath, alterations. (C) A. Seidman, 1312 North Sixth street.

**Storage,** Twenty-third and Race streets, \$1,700. (O) William F. Powell, Northwest Corner Twenty-third and Race streets. Brick, 1 story, 52x54 feet addition. (C) Mitchell Bros., 2125 Race street.

**Tank Support,** North side of Snyder avenue, West of Swanson street, \$500. (O) Publick-Ward Co., on premises. Steel.

**Factory,** 1331 Victoria street, \$1,500. (O) Theo. Marqueland, 3633 Germantown avenue. Brick, 1 story, 14½x66 feet. (C) John Buchert, 3629 Sydenham street.

**Hotel,** Northeast Corner Broad and Fairmount avenue, \$20,000. (O) Salvation Army, on premises. Fire tower and alterations. (C) F. L. Hoover & Sons, 1023 Cherry street.

**Dwelling,** 438 North Simpson street, \$300. (O) A. DeMeo, on premises. Brick addition, 1 story, 12x17 feet. (C) Silvis DeMeo, on premises.

**Dairies,** 3043 Chestnut street, \$1,000. (O) Abbott Dairies, on premises. Brick, 1 story, 22x38 feet, alterations.

**Store and Dwelling,** 1114 North Fortieth street, \$1,500. (O) David Davidson, on premises. Alterations to store, flush bulks. (C) A. Yermanock, 3828 Cambridge street.

**Store and Dwelling,** 327 South Sixth street, Philadelphia, \$300. (O) H. Bepperling, 936 Somerset street. Flush building. (C) H. P. Werner, 3245 Germantown avenue.

**Store and Dwelling,** 2620 Memphis street, \$300. (O) H. W. Leis, 2008 East York street. New flush bulk. (C) William E. Stone, 2069 East Dauphin street.

**Store and Dwelling,** 3707 Germantown avenue, \$500. (O) N. N. Rosenberg, on premises. Interior alterations. (O) J. Y. Loux, 3731 York road.

**Dwelling,** 5935 Pulaski avenue, \$300. (O)

W. H. Stauffer, on premises. Bay window and alterations. (C) L. D. Stites, 126 Herman street.

**Restaurant,** 1203 Cuthbert street, \$485. (O) Horn & Hardart Co., 214 South Tenth street. Fire repair damage. Harry Rust, 19 South Eighth street.

**Factory,** 729 Arch street, \$1,800. (O) Max S. and Morris Apt, on premises. Interior alterations and new bulk. (C) F. I. Wintz, 1618 North Twenty-seventh street.

**Store and Dwelling,** 745 South Second street, \$6,400. (O) Mrs. Jennie Goldsmith, 841 South Second street. New bulks, addition, brick, 2 stories, 16x42 feet, slag roof, alterations. (C) Frank Lucci, 1603 Ellsworth street.

**Store,** 2754-56 Kensington avenue, \$600. (O) A. Kahn, on premises. Brick, 1 story, 6x7½ feet, alterations, flush bulk. (C) William M. McCaughey, 108 East Westmoreland street.

**Store and Dwelling,** 5109 Market street, \$450. (O) Robert C. Hutchinson, 5109 Market street. Alterations. (C) Harry Sadjian, 1583 North Fifty-second street.

**Store,** 1112-14 Chestnut street, \$375. (O) John Cadwalader, on premises. Bay window, second floor. (C) Max Nathan, 7816 Laycock street.

**Store,** 512 Butler street, \$1,100. (O) James Pitchie, on premises. Addition, brick, 1 story, 14x18 feet, alterations. (C) Fred Peccari, 3752 North Randolph street.

**Office,** 83 Armat street, Philadelphia, \$400. (O) P. & R. R. R., Twelfth and Market streets. Brick, 1 story, 10x8 feet. (C) George C. Fossel, 5604 Utah street.

**Shop,** 1813 Blair street, \$1,000. (O) Samuel Goldes, 1804 Frankford avenue. Brick, 2 stories, 16x6 feet, alterations. (C) C. Yacknitz, 1202 North Seventh street.

**Store,** Northwest Corner Broad and Bainbridge streets, \$300. (O) B. Brodsky, 449 North Third street. Interior and exterior alterations. (C) H. Seidman, 1312 North Sixth street.

**Restaurant,** 818 Chestnut street, \$300. (O) A. B. Pierson, New York City. Alterations.

(C) Harry R. Rust, 19 South Eighth street.

**Store,** Southeast Corner Fifty-second and Arch streets, \$680. (O) John A. Dougherty, 5108 Walnut street. Alterations. (C) Basch & Co., 1426 South Front street.

**Store and Dwelling,** Northeast Corner Orthodox and James streets, \$1,000. (O) Wincoff & Weiss, Southeast Corner Melrose and Orthodox streets. Alterations. (C) Berkelbach & Co., 4608 Richmond street.

**Dwelling and Store,** 2455 South Philip street, \$1,000. (O) Mitchell Smolen, on premises. Alterations. (C) Samuel Lit, 515 Wharton street.

**Dwelling,** 6217 Girard avenue, \$800. (C) C. E. White, 511 North Sixty-third street. Alterations and heater and range.

**Dwelling,** 505 Pine street, \$500. (O) Dr. I. Schechter, 505 Pine street. Alterations. (C) Louis Swerdloff, 228 South Fifty-ninth street.

**Store,** Southeast Corner Main and Green Lane, \$1,000. (O) P. O. S. of A, Camp 111, on premises. Flush bulks, alterations. (C) Wm. H. Eddleman & Son, 453 Green Lane.

**Store,** 1228 Columbia avenue, \$1,000. (O) Jos. H. Bush, 1226 Columbia avenue. New flush bulks. (C) Basch & Co., 1426 South Front street.

**Store and Dwelling,** 2419 Cedar street, \$400. (O) J. Kublicki, on premises. Alterations, flush bulk. (C) Henry Hobert, 2620 East Cumberland street.

**Chicken House,** rear 5627 Ridge avenue, Roxboro, Pa, \$400. (O) Albert Walker, on premises. Asbestos side and roof, 1 story, 17x40 feet.

**Dwelling,** 1411 South Clarion street, \$300. (O) S. Quaglin, on premises. Brick, 2 stories, 14x9 feet, slag roof, addition. (C) V. Giordano, 1921 South Iseminger street.

**Dwelling,** South side of Fountain street, East of Manayunk avenue, \$300. (O) R. Bauer, on premises. Brick, 1 story, 14x12 feet, addition.

**Dwelling,** 35 North Thirty-fourth street, \$300. (O) E. F. Owings, on premises. Enclosing front porch. (C) W. L. Burton, 2108 Sedgley avenue.

**Dwelling (add., Garage),** 108 Rochelle avenue, \$300. (O) J. G. Ellison, on premises. (C) Michael D'uva, Manayunk avenue and Walnut lane.

**Light Manufacturing Building,** 21-23 South Sixth street, \$360. (O) Franklin Printing Co., on premises. Alterations to front, first floor. (C) F. I. Wintz, 1618 North Twenty-seventh street.

**Store,** 2405 South Broad street, \$960. (O) Morris Madgett, on premises. Flush bulks. (C) Nathan Litman, 2030 South Fifth street.

**Store and Dwelling,** 2137 Ridge avenue, \$462. (O) Henry Fuller, on premises. New flush bulk. (C) Nathan Litman, 2030 South Fifth street.

**Garage,** 1635-7-9 Vine street, \$500. (O) M. W. Weil, Sixth and Cherry streets. Repair fire damage. (C) A. Zellfelder, 151 South Broad street.

**Open Sheds (2),** 3034 Euclid avenue, \$725. (O) Wm. Linker Co., 831 Cherry street. Frame, 1 story, 10x48 feet and 12x120 feet.

**Store,** 4266-68 Main street, \$500. (O) Est. Catharine Schofield, 425 Lyceum avenue. New flush and repairs. (C) Charles C. Cox, 425 Lyceum avenue.

**Store and Dwelling,** 134 South Sixtieth street, \$850. (O) Max Secon, on premises. Hot water heating. (C) Edw. R. Sabin Co., Sixty-third and Walnut streets.

**Dwelling,** 727 South Ninth street, \$1,800. (O) Jos. Baranzano, 811 Fitzwater street. Brick, 2 stories, 16x14 feet, addition. (C) Frank Sbroglia, 703 South Tenth street.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

Garage, Watt street, South of Dauphin street, \$1,400. (O) A. S. Cassell, 2249 North Broad street. Brick, 1 story, 15x25 feet. (C) William J. Jones, 2927 North Fifth street.

Factory, Sixteenth and Pennsylvania avenue, \$85,000. (O) Wm. Sellers Co., Sixteenth and Hamilton streets. Brick and concrete, 5 stories, 108x54 feet. (C) Barclay White & Co., 1713 Sansom street.

Garage, Cumberland and Corlies streets, \$400. (O) Lewis T. Hubbs, 3016 Cumberland street. Brick, 10½x15 feet. (C) Wm. McDowell, Thirty-second and Ridge avenue.

Water Cooling Tower and Steel Support, Third and Norris streets, \$1,200. (O) Norris Market Ice Mfg. & Cold Storage Co., on premises. (O) P. Haibach Cont. Co., 1261 North Twenty-sixth street.

Garage, Wyoming avenue, West of Second street, \$800. (O) Dr. C. T. Race, Second and Wyoming avenue. (C) A. V. Turner, 6240 North Thirteenth street.

Dwelling, Cottman and Duncan streets, \$3,500. (O) James Griffith, 836 N. Orianna street. Frame, 1 story, 24x40 feet. (C) Neveling ros., 121 Sylvania avenue, Rockledge, Pa.

Garage, 2063 North Sixty-second street, \$900. (O) Thos. F. Reilly, Bala, Pa. Brick, concrete block, 2 stories, 20x20 feet, slag roof.

Garage, Woodstock and Sttella streets, \$1,500. (O) Charles J. Heckler, 3001 Croskey street. Brick, 1 story, 17½x70 feet, slag roof.

Dwellings (8), Broad and Green lane, \$38,000. (O) John Janke, 6295 North Broad street. Brick, 2 stories, 16x28 feet and 13x43 feet, slag roof, hot water heating.

Dwellings (2), Broad and Green lane, \$5,000. (O) John Janke, 6295 North Broad street. Brick, 2 stories, 16x48 feet, slag roof, hot water heating.

Store, 3537 Germantown avenue, \$4,000. (O) Paul A. Rinek, 3761 North Eighteenth street. Brick, 1 story, 20x96 feet. (C) H. E. Sweger, 4435 North Uber street.

Wagon Storage, Merion avenue and Girard avenue, \$12,500. (O) Supplee-Wills-Jones Co., Twenty-sixth and Jefferson streets. Brick, 1 story, 130x51 feet and 60x50 feet. (C) Geo. Kessler Cont. Co., Drexel Building.

Dwelling, 6803 North Twelfth street, \$1,000. (O) Thomas C. Poole, 130 SHunting Park avenue. Alterations, interior. (C) John H. Dagney, York road and Sixty-ninth avenue.

Slaughter House and Dwelling, 884 North Marshall street, \$400. (O) Mrs. J. Mickels, on premises. Alterations. (C) J. Newborn, 2019 North Eighth street.

Storage Shed (open), 1826-30 East Clearfield street, \$400. (O) Clearfield Textile Machine Co., on premises. Frame, 1 story, 36x24 feet.

Store and Dwelling, 1246 Federal street, \$1,600. (O) P. Oteri, on premises. Brick, second and third stories, 12½x24 feet, 1 story addition 12x12 feet. (C) J. Ferarri, 1233 Latona street.

Store and Dwelling, 161 North Marshall street, \$1,075. (O) Agt. E. J. Edelstein, Fourth and Morris streets. New flush bulks, alterations and repairs. (C) M. Litman, 2030 South Fifth street.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

## THE LARGER ASPECT OF HOME COMMUNITIES

(Continued from Page 104.)

most difficult things over which a land company may attempt supervision, but in this time of individualism if everyone goes ahead to carry out his own particular architectural whim as recently has been the almost universal case—the result can only be a wide, jarring discord. The community as a whole can have no significance, it will exist merely as a confusion. And the point for the land companies to see is that with all the publicity given the subject through popular magazines the people are gradually becoming aware of this fact, and the awakening will soon result in a demand for better things, for communities that do have a significance as a whole, that shall be harmonious units, as, for example, is Hampstead, in England, Forest Hills Gardens on Long Island, and section of Roland Park, Baltimore. In this event the present communities of wholly inharmonious architectural notes will grow out of fashion and will be discarded as utterly ugly and unendurable.

It is difficult to say just what should be undertaken in this direction, for there is little precedent in architectural control under usual circumstances. In the first place it may be said that architects, landscape architects, land developers, future residents and everyone concerned with the up-building of a community should be trained in this regard to think first of all of the total result and to make each successive building take its place in the scene already existing. There is no length to which the company should not go to thoroughly establish this point of view in the minds of the incoming residents. Almost universally it will be found people have no other idea than that of the appearance of their own individual property. Their attention has never been called to the importance of a harmonious result in the community as a whole. Only in certain older sections of the country where good taste has restrained people from building houses of striking individuality has there been the least consideration for community results. But it is the community results, the harmony through unity that binds all the buildings together into a single picture that must be the first consideration.

After thoroughly familiarizing people with this idea certain restrictions or specifications will be less regarded as curtailment of personal property. A landscape architect may offer a general

motive or scheme in accordance with which the houses should be built. Certain colors, roof-pitches, types of windows or styles of architecture may be prescribed for a certain section. Residents should be given the widest possible range in the selection of a plan but it should be made clear that their own starting point and that of their architect must have relation to the community result and what precedes them in the neighborhood. Really good designs may be seldom obtained but it is possible to eliminate objectionable features and the clashing discords that make bedlam of our suburbs.

The reservation of sights for public buildings and the planning in the case of large subdivisions of community centers is a point at the heart of the whole problem of social organization. Until we have neighborhood centers that adequately serve the needs of the surrounding inhabitants in a religious, political and recreational sense, we will be a nation of precarious stability and uncertain effectiveness.—“Realty.”

## CREDIT NOW AVAILABLE FOR BUILDING, SAYS GLASS

Country Under Impression War Bans Still Exist—Treasury Heads Urge Construction Boom

No valid reason now exists “why sufficient credit should not be made available for useful building operations,” said Secretary Glass.

“The impression seems to exist,” he said, “that policies initiated during the war by Secretary McAdoo and by the Federal Reserve Board for the conservation of credit are still fully effective and are responsible for inactivity in the building trade. The activities of the country have undergone a great change since the signing of the armistice, and many industries which are engaged in the production of war material and for which credits were essential are now directing their energies to other lines more nearly related to the normal activities of peace. Consequently many of the policies which were adopted to meet war needs are now out of date.”

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Portland Cement, Sand or Gravel by carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

## As The Editor Sees It

AS a part of the "Own Your Home" campaign inaugurated in this country,

The first "Own Your Home" Exposition ever planned in the world will be held during the week of April 21-26, 1919, at the First Regiment Armory, Philadelphia, under the auspices of the Philadelphia Real Estate Board. The exhibits will include everything that enters into the building and furnishing of a home from the cellar to the roof.

Ernest H. Crowhurst, who has been appointed General Manager of the Exposition, has taken up his headquarters at the Real Estate Board's building, 1126 Walnut Street, Philadelphia, where he is receiving applications for exhibition space. A wide variety of interests are already represented in the booths which have been reserved. These include operative builders who will show miniatures of some of their best houses; heater, range, stove and heating appliance men; paints and painters; wall papers; big house furnishing houses; makers and dealers in sanitary wares; plumbing materials; tools of all kinds used in house building; hardwood and mineral floors; electric supplies; gas supplies and appliances; lumber and lumber supplies; trimmings of all kinds; floor coverings; draperies; pictures; shrubs, trees, flowers and grass seeds; ornamental iron work; pianos; talking machines; fire insurance companies; trust and title insurance companies; interior and exterior photographers, and a host of other enterprises

all connected with home building and home making.

The armory is the best situated building in Philadelphia for such purposes. It is at Broad and Callowhill Streets, within 200 yards of City Hall and in the center of the business district. Admission is to be free and it is expected that between 100,000 and 150,000 people, all vitally interested in exhibits, will pass through the doors during the week.

The exposition will be the central feature of the great "Own Your Home" campaign which all the allied business interests in Philadelphia, including the Real Estate Board, are to conduct. Thousands of dollars are to be spent in a whirlwind advertising campaign and the exposition will greatly benefit from this. The exposition building will be the headquarters of the "Own Your Home" campaign committee during the week of April 21-26, when the advertising campaign will reach its climax.

The armory contains 24,000 square feet of exhibition space. Mr. Crowhurst, who has conducted expositions in New York and this city, was chosen as general manager because of his expert knowledge in this connection.

Judging from the manner in which applications for space are being received by him at the Real Estate Board building, 1126 Walnut Street, this will be the largest and most interesting exposition of any kind ever held in this city. So many lines of business figure in the building and furnishing of a "home" that the va-

riety of the exhibits will be so great as in themselves to form one of the most attractive features of the campaign.

\* \* \*

HIGH freight rates and the great difficulty experienced in securing transportation facilities at any price, have been contributory causes to the tardiness in the resumption of building.

In hopes of alleviating these conditions, E. Guy Sutton of Indianapolis, Ind., Secretary of the National Association of Sand and Gravel Producers, and Geo. J. Nattkemper, of Terre Haute, Ind., have been in Washington for several days endeavoring to get the Railroad Administration to reduce freight rates on sand, gravel, crushed stone and slag. This action, they assert, will be beneficial to the building industry throughout the country and immediately will assist in the acceleration of building and construction activities, so much desired by the Department of Labor.

These two representatives of the sand and gravel interests have appealed to F. T. Miller of the Division of Public Works and Construction Development of the U. S. Department of Labor, asking that he interest himself in the freight rate situation. In presenting the situation to the Division, Mr. Sutton made the following statement:

"There are thousands of idle open-top railroad cars in the country today. To utilize these cars is to increase railroad

**BLUE  
PRINTS**

revenues. They can be utilized by the sand, gravel, crushed stone and slag producers if the prohibitive freight rates put in effect during the war are revised.

"The reasons for promoting and stimulating improvement work of all kinds advocated by the various departments of the Government and sanctioned by the President are apparent and in general are as follows:

1. To stabilize labor by providing employment for demobilized soldiers and workmen released from war activities.

2. To tide over the period of readjustment during which time industrial and commercial conditions must be restored to a peace basis.

3. To bring up to a normal state of development the following work deferred because of the demands for and transportation of materials of war.

- (a) Highways.

- (b) Public Buildings.

- (c) Private Buildings.

- (d) Railroad repairs and extensions.

"Regardless of the evident need for carrying on improvement work with the greatest possible dispatch, the hastening of construction work is being discouraged throughout the country. In analyzing the situation it is found that the reason for delay is the question of cost involving the items of labor, materials and transportation. All of these factors of cost are high at this time and in consequence thereof building work that would otherwise proceed in being put off in the hope that the cost will sharply decline so that appropriation and funds now available may be used for work already projected.

"It will be conceded without argument that wages should not be radically decreased during the existing state of affairs. Moreover, a sharp decline in the price of materials likewise would bring disaster. It appears, therefore, that the only source of relief lies in the reduction of transportation charges applying on basic building materials.

"In this connection it is well to point out that, in consequence of the provisions of General Order No. 28, taking into consideration the disposition of fractions, sand, gravel, crushed stone and slag bore a much greater increase than other commodities, inasmuch as instead of 25%, the advance amounted to from 25% to 150%. It is assumed that the high rate of increase was placed upon these materials in order to discourage the production and transportation of such materials and to act as a means of curtailing construction work in general during the war period. In view of the reverse conditions now obtaining, it

would appear that this form of restraint on building activities might be removed along with other restrictions released by the various war agencies.

"Moreover, the freight rates applying on sand, gravel, crushed stone and slag are too high to permit a free movement of these materials and thus the railroads will lose a large volume of traffic that otherwise would be offered; with a consequent decrease in revenue while at the same time the output of plants engaged in the production of these materials will be greatly reduced by the development of local pits and quarries from which low grade materials are obtained suitable only for inferior work resulting in enormous investment losses by industries already established.

"On account of the decreased demand for coal due to the cessation of war work and the prevailing mild weather, there is at this time on every railroad in the country a surplus of open-top cars. This surplus will increase as the season of maximum construction approaches unless the movement of other commodities suitable for shipment in the open-top equipment is provided for. A car surplus likewise means a reduction in the number of men employed by the railroads, thereby further complicating the labor situation.

"To recapitulate, a reduction in freight rates applying on sand, gravel, crushed stone and slag will accomplish the following results:

1. Stimulate and hasten the promotion of improvement work, thus giving employment for the increasing number of idle laborers.

2. Increase the revenue of the railroads.

3. Provide for use of the great surplus of open-top cars.

4. Permit deferred construction work to proceed without further delay.

5. Remove the discriminating character of General Order No. 28.

6. Encourage the development of permanent wealth which will aid in paying the heavy taxes imposed by the war.

7. Place in circulation idle capital, which will help in floating the next bond issue.

8. Give the building trades, including contractors and producers of building materials, a chance to recuperate some of the losses sustained by the necessary restrictions placed in construction during the war.

"In view of the circumstances and conditions which we have related, we earnestly appeal for a modification of General Order No. 28, to apply on sand, gravel, crushed stone and slag, so as to

allow the movement of a large volume of such materials, to the end that the foregoing objects may be accomplished.

"With the building season now at hand, the matter is imminent and we urge the prudence of immediate and favorable action."

\* \* \*

Inventory of Building Materials by Construction Division of the Army, from the Office of the Director of Sales, War Department.

Some time ago all construction projects of the War Department were directed to send in inventories of materials and equipment which were surplus and, consequently, available for sale or transfer.

These inventories as of December 31st, have been submitted to the Chief of Construction Division of the Army and compiled into general classifications. They are divided into the following main groups:

Lumber, Plumbing and Heating, Electrical Material and Equipment, Cement, Wallboard, Millwork, Roofing, Screening, etc., Miscellaneous Building Material, Steel, Nails, Bolts, Nuts and Washers, Building Hardware, Paints and Oils, Railroad Material, Paving Material, Piling and Poles, Raw Materials, Fencing, Belting, Cable, etc., Chain, Dynamite Caps, etc., Fuel, Hose, Harness, etc., Lanterns, Flashlights, etc., Rope and Miscellaneous.

The total cost to the Government of the above materials is approximately \$12,000,000.

In addition to the above there is approximately \$3,500,000 of Construction Equipment, Office Equipment, Small Tools, etc.

Great quantities of the above material are being consumed inside the War Department, the Construction Division alone having made, since December 31st, 800 transfers of materials which were declared surplus at one project or another, transferring it to some project where work was being completed. Approximately \$2,000,000 of building material has been absorbed in this manner, and the transfers continue speedily.

The War Department is making no purchases where material can be obtained from some other project. The largest single item on the above summary is lumber, representing approximately one-half the total. A contract for this has been made with the producers and same will be distributed to the market at market prices.

Inasmuch as the Construction Division probably has 90% of all building materials in the War Department, it will readily be seen that there is no cause for anxiety on the part of the public with

### "Sold but not Delivered"

"Why did the building contractor for the South Side operation fail?" the bank president was asked.

"Because he was two months late in finishing the job, and the penalties ate him up."

"Labor troubles?"

"No, he couldn't get the lumber on time."

It's an old story. Wise contractors know that it pays to buy of a concern that has a reputation for delivering promptly the lumber that it sells.

Wiggins Co., Otis Building; H. E. Baton, 1713 Sansom street; Frank G. ## More than Half a Million square feet of Barrett Specification Roofs protect the Great Remington Arms Plant

**T**HE type of roof to be used on a huge job like this cannot be decided on the basis of individual preference. Nor can experimenting be tolerated. For the investment is too large and the consequences of a mistake are too serious. When architects and engineers face a roofing job like this they have to get right down to *proved* facts and figures. They have to be absolutely *sure* on four points.

**First.** That from start to finish they will get just the kind of a roof they specify, with no chance for "skimping" or substituting inferior materials.

**Second.** That the manufacturer of the roofing materials is thoroughly reliable, and has had long and successful experience in the roofing business.

**Third.** That the roof will positively be trouble-proof and free from maintenance expense for a long period of years.

**Fourth.** That it shall be the most economical roof possible to obtain, not as to first cost, but, what is of greater importance, as to *cost per year of service*.

Because Barrett Specification Roofs meet *all* of these requirements better than any other type of roof, they were selected to cover these great buildings.

Today the *standard* covering for permanent buildings is a Barrett Specification Roof. It takes the base rate of insurance. It costs less per year of service than any other type of permanent roof. It is guaranteed for 20 years.

**This is the bond that guarantees your roof for 20 years**

### The 20-Year Guaranty

**A** 20-YEAR Surety Bond is now offered on all Barrett Specification Roofs of fifty squares and over in all cities of 25,000 population and more, and in smaller places where our *Inspection Service* is available.

This Surety Bond exempts the owner from all expense for repairs or up-keep on his roof for 20 years. It is issued by the U. S. Fidelity and Guaranty Co. of Baltimore, one of the largest Surety Companies in America. Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us and his work subject to our inspection.

Thus, in spite of the fact that we do not build roofs ourselves, we are put in a position where we can actually *guarantee* the delivery of the long years of service which Barrett roofs are capable of giving.

#### Barrett Floor and Foundation Water-proofing

Barrett materials were used not only on the roofs of the buildings of this great plant, but also to water-proof the floors and foundations. 264,600 square feet of Tar-Rok Flooring; 966,000 square feet of two-ply floor-water-proofing; 126,800 square feet of foundation-water-proofing.

### AS THE EDITOR SEES IT.

(Continued from Page 116.)

respect to this surplus. At each of the 476 projects there is a Constructing Quartermaster, who will make sales of his own surplus under general instructions issued from the Director of Sales Office. This means that the majority of this surplus will be absorbed in the particular locality in which it is located.

\* \* \*

The Office of the Director of Sales, War Department, announces the following additional inventories of surplus materials furnished by the Construction Division of the Army:

#### MILL WORK

25,000 Doors.

20,000 Screen Doors.

200,000 Sash.

8,000 Rolls Wire Screen.

Miscellaneous Mill Work.

Approximate cost \$380,000.

It is to be noted that the sash are special, with special sized glass.

#### ELECTRICAL EQUIPMENT

Miscellaneous electrical equipment, exclusive of machinery .....\$200,000

#### PLUMBING, WATER AND SEWER PIPE AND SUPPLIES

8,000 Water Closet Bowls.

2,000 Water Closet Tanks.

375,000 Ft. Sewer Pipe, assorted sizes.

30,000 Ft. Soil Pipe.

175,000 Ft. Wood State Pipe, mostly 8 in. and 10 in.

500,000 Ft. Cast Iron Water Pipe, mostly 8 in. and 10 in.

800,000 Ft. Wrought Iron Water Pipe.

2,000,000 Ft. Galvanized Water Pipe.

600,000 Ft. Unclassified Water Pipe.

Assorted Pipe Fittings, etc.

Approximate cost .....\$1,350,000

#### MISCELLANEOUS BUILDING MATERIALS

Lime ..... \$112,500

Reinforced Steel ..... 180,000

Corrugated Iron ..... 360,000

Nails ..... 370,000

Roofing ..... 300,000

Building Paper ..... 62,500

Railway Equipment, various

wts. Steel Rail ..... 1,200,000

Ties ..... 400,000

Total .....\$2,985,000

Portland Cement, Sand or Gravel by carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

## As The Editor Sees It

THE Annual Convention of Builders' Exchanges was held in Milwaukee during the week of February 25th. Attention was given to consideration of material prices and future outlook for construction, and to a consideration of broader organization of all construction industries, business methods and policies. In his annual address, the President, John R. Wiggins, Philadelphia, Pa., gave a clear and comprehensive review of the effect of the war on the building industries and a summary of the year's most significant activities. His answer to the very disturbing labor problem of today is forceful and convincing. In fact, the whole address is of great interest to all concerned, and we print it, therefore, in full:

"To the the National Association of Builders' Exchanges:

"The war was the controlling factor in the building industry during your President's entire term, beginning in February, 1918, everything else being entirely subordinate to this. The building industry is in normal times the second largest industry of the United States after agriculture. Its annual product is between two and three billion dollars. It is authoritatively stated that twenty-five per cent. of normal railroad freight transportation is of material used in building.

"The different bureaus of war administration very soon found that the prosecution of the war was inconsistent with peace activities on a normal scale. As the needs of the war developed, it became

apparent that nearly all work must be abandoned which had not a direct bearing upon war production or which was not required for necessities for the civil population. The largest individual unit of industry which could be sacrificed for the prosecution of the war was the building industry. It was possible to stop new building except for direct war needs. The constantly increasing prices of material, the difficulties of the freight situation and the growing scarcity of labor would, without direct efforts, have greatly diminished building, but direct restrictions upon building came at an early date from the Secretary of the Treasury and the Capital Issues Committee, and later from the War Industries Board. By these influences the industry was reduced, except for war work, almost to the vanishing point, during the summer just passed. Even this was not satisfactory, and a meeting was called by the War Industries Board for the 11th of November, for representatives of the State Councils of Defense throughout the country to assemble at Washington and receive instructions for even more stringent limitations of building. Fortunately, the armistice was signed on that very day and it was possible to announce at that meeting almost complete relief from direct governmental interference with building operations.

"These facts are not reviewed with any spirit of complaint toward the officers of the Government engaged in carrying on the war. It was the duty of every citizen

to submit his private interests to the public needs. It is highly gratifying to all those concerned in the building industry that the officer of the War Industries Board particularly concerned in the limitation of building, publicly declared after the armistice that the orders of the Government to this end were cheerfully complied with, even where these involved the greatest sacrifices, and that the building industry to his knowledge had shown itself during the war as one hundred per cent. patriotic.

"The large amount of building done by the Government for war purposes consumed considerable building material and used a large amount of labor, particularly in certain trades, but the work was highly localized, the range of materials was not very great, and the contracts were in very large units, executed by a very limited number of contractors, as compared with the total throughout the country. In consequence, the building industry in general did not receive the benefit from the Government contracts which their volume, at one time approximating one-half the normal building construction of the country in peace times, might have been expected to give. Since the armistice the winter season has been sufficient to prevent the resumption of building even had conditions otherwise been favorable.

"Your President is, therefore, obliged to report upon the general building situation that the year has been in many respects the most disastrous for the indus-

try that has been known within the lifetime of our members. No very great scope was left for the activity of the Association during this period. It has been chiefly confined to two important matters: The organization of the National Federation of Building Industries and participation in its activities, and the consideration of questions relating to labor.

"During the winter of 1917-18, a plan was evolved to unite the entire building industry in a single federation which would include wholesale and retail manufacturers of building material, the distributors, the architects and engineers who plan the buildings, the contractors who construct them, and bankers who finance building operations. At one time it was contemplated to include in the Federation representatives of labor unions in the building trades. It was at first expected that the American Institute of Architects would undertake to call together this organization, but this responsibility finally devolved upon the Chamber of Commerce of the United States. The immediate object of such a Federation was to serve as a War Service Committee similar to those organized in other activities, but its founders looked to a permanent organization after the war. It was believed that a single organization speaking for the entire industry could speak with much more authority than any single branch.

"This subject received the consideration of the Pittsburgh Convention, and resolutions were then adopted, as shown on page 70 of the Report of Proceedings, directing the President of this Association to take steps to secure the federalization of the building industry in co-operation with other material organizations. Accordingly, acting with the advice of the Board of Control, a delegation was sent to the organization meeting of the proposed Federation at Atlantic City in July, 1918. Some of the local Exchanges sent independent delegations. The Federation was then formed as a War Service Committee and devoted its efforts during the war to co-operation with the Government in dealings with the building industry, endeavoring to secure the support of the industry to all necessary restrictions and to obtain such modifications of restrictive rules as might, without interfering with the prosecution of the war, do the minimum of harm to the building industry. It was unfortunate that the Federation was not formed until a most restrictive policy had not only been agreed upon, but definitely formulated, and that its efforts, which might have been of value six months earlier, were not highly productive after the organization had been perfected during the last few months of the war.

"In December the Federation held a second meeting at Atlantic City, and it was unanimously resolved that it should be continued as a permanent body with a change of name to the "National Federation of Construction Industries." The object is to have an association which will represent the entire building interests, made up by federation of the different bodies concerned in the business.

"Your President was made a director of the temporary and of the permanent organizations and has become convinced of the value of the organization to the building industry. He believes that the membership of this Association in it should be continued. The manufacturers of building material are a large and influential class of men. Many of them have organizations of great strength and very large means. In most matters involving the building industry their interests are identical with those of the contractors. It is believed that there are many occasions where the contractors can be greatly benefited through being able to call to their assistance this whole organization and the powerful bodies of manufacturers represented in it.

"Upon the question of labor, your President would say that almost immediately upon his election, he took up with the Secretary of Labor the proposition to endeavor to establish some method of settlement of jurisdictional and other minor strikes, so that the progress of building should not be impeded by matters of no great importance which ought to be settled by peaceful methods of arbitration. Secretary Wilson expressed himself very strongly in favor of the proposal, and said that the Department would be greatly pleased to be the means of getting together the representatives of labor organizations and of contractors for a conference to see what system could be adopted toward an end which all agreed was proper. He said that the National War Labor Board was then just in process of formation and he thought it necessary to submit this matter to their consideration to ascertain first whether they were prepared to accept jurisdiction of it. It was so referred and your President was informed that the Board had assumed jurisdiction. But the Board was almost immediately overwhelmed with a mass of actual strikes in progress and had to give its entire attention from that to the present time to the settlement of existing strikes rather than to the study of means to prevent future strikes.

After a number of efforts to secure action, it was determined that it was hopeless to expect anything to be done; and, upon the organization, after the armistice, of the Division of Public Works and Construction Development in the Department of Labor, the papers

were referred to that division and efforts made toward progress to some definite result. Externally such progress has not yet been made, but your President is assured that the matter has been taken up and that investigation is now going on with a view to accomplishing the end proposed and that it will be but a matter of a few weeks when negotiations can be taken up with considerable prospect of success for the adoption of some mode by which jurisdictional strikes may be greatly reduced or wholly prevented. This is commended to the incoming administration of this Association as one of its most important labors.

"The question of the reconstruction of the building industry is the question of primary importance to all of us here. The Department of Labor has constituted the Division just referred to for the very purpose of doing everything that is possible to revive the building industry. Investigations have been begun by this division in regard to questions of finance, of materials and of labor. The greatest publicity has been given to its work, and it is fair to say that this Division, under the able leadership of Mr. Franklin T. Miller, is doing everything possible to overcome the present stagnation of the building industry.

"One of the movements under consideration, with a view of the most vigorous support and aid, is the movement known as "Own Your Own Home." In various parts of the country such local movements have met with great success. In Seattle during the progress of the war a local movement was started for building workingmen's homes without Government aid and carried to a very high degree of success. Such widely separated cities as Birmingham, Alabama, and Portland, Oregon, have carried on "Own Your Own Home" campaigns with marked benefit to their localities. Your officers have been active in the study and encouragement of this movement, both through co-operation with Government officers and through their part in the National Federation of Construction Industries. A great deal is expected from this movement. It will demand in each locality hearty local co-operation. It is believed that there are in each city a number of associations which ought to unite for this purpose and bring the movement locally to success as soon as it is instituted. These are particularly the Real Estate Boards, the Builders' Exchanges and the Chambers of Commerce. In some cities there are local associations of building supply dealers.

"The two factors of the greatest importance restraining building activity at the present time are the high prices of materials and labor and the uncertainty in regard to the stability of prices. An

effort is being made in influential quarters to reduce the prices of materials through a reduction of freight rates, since the railroads now have many idle cars which might be usefully employed in hauling building materials at low rates rather than being idle. A number of cities report movements for increase of wages in the building trades. Surely, any increase will discourage building, and it is short-sightedness to take action which reduces the possibility of employment below present limited promises. Any increase in wage scales increasing the cost of building would be a deterrent to building to a great degree. This would result in less money being paid to the workman than if building can be carried on without any increase in cost. It is believed that this is a wrong time for increases of wages and that the standard scales adopted in the year 1918 should remain in force without increase for 1919.

"The Department of Commerce also has initiated a movement for the investigation of the prices of commodities with the view of getting the manufacturers to put their prices on the lowest level affording a reasonable profit with the least possible delay. Such reductions would not only of themselves encourage building, but they would assure the public of stability of prices, since further reduction below such level could not be expected by prospective purchasers. The result of stability, even at prices above the pre-war level, would be to assure prospective investors that their promptness in building would not be punished by seeing their competitors build at reduced prices by waiting three to six months.

"It would equally help to stabilize the cost of building if the definite policy were adopted of no reduction in established wage scales, during 1919, as well as no increase.

"The demand for building throughout the country is pressing. It can not long be avoided. The important thing is that every obstacle to building shall be removed as soon as possible, so that steps may be taken immediately to begin to meet the need for new buildings.

"At this time it is unfortunately not possible to speak of any immediate prospects for revival of the building industry with as much confidence as any of us could desire, but it must be borne in mind that this is the winter season, when little work can be done and when no work is begun, and that normally with the spring, building will be reopened. Throughout the country there is information of building projects of greater or less magnitude. A considerable program of public building by the United States is in immediate prospect. Building by the States and municipalities will be vigorously pressed.

Many business buildings must be put up, no matter at how high cost, because the businesses are losing more by insufficient housing than they would by building at the present high cost. It is also believed that there will be considerable building for home owners within a comparatively short time, since this is a matter that depends upon the possession of funds for home building rather than upon the exact amount to be derived from rentals by way of return upon investment.

"If we turn our gaze from the immediate future to the ultimate future of building, we can see nothing but the greatest encouragement. The entrance of this country into the foreign war has greatly broadened the country's aspect. We are looking to export trade to a degree never before in the history of the United States. Our young men who have taken part in the war have visited new scenes either in this country or in Europe. They have been physically developed by their military experiences. They have broadened their outlook. The future generation will possess the benefit of this sharpening of the aptitudes which has come from this widened experience, and our young men under this stimulus will develop greater enterprise than if they remained permanently in their homes throughout the period of young manhood.

"The financial conditions of the European countries, the great physical losses inflicted upon France, the loss of man power in England, the large burden for reparation which will fall upon Germany, as well as the very heavy debts in which all European governments are involved, will lead to the opening of distant markets to the United States in a measure never before known. This stimulus to the national industry will result in increased business and constantly increased building. The future, therefore, is full of hope. We turn our backs upon the sadness and burden of the year of war with entire confidence that the progress of our country is assured and that the building industry will share in the general prosperity that awaits us in the near future.

"By way of putting these views into practical shape for action, I would recommend the following:

"1. That the Association should inform the Secretary of Commerce by resolution or otherwise of their commendation of this effort to lower and stabilize the price of material.

"2. That the Association should also notify the Secretary of Labor of its approval of the efforts of his Department to encourage building.

"3. That a Committee on Reconstruction be appointed by this Convention to which shall be referred all resolutions

bearing on the subject, except those relating to labor, and who shall report to the Convention such course of action as may seem proper.

"4. That the President's report be referred to that Committee, excepting the part referring to labor, which shall be referred to the Committee on Labor.

"5. That this Association shall particularly address the Railroad Administration directly, or through other proper means, in favor of lowering freight rates on building materials of all classes.

"Now, that is all of the President's report. The program also calls for the report and address of the President. I think the reading of that report has taken up sufficient of your time, so far as the President is concerned, except that in the way of an address, if you choose to so call it, I want to bring before your attention, and particularly before the attention of the Committee on Labor, three witnesses, and to make some slight comment on the evidence presented by those witnesses.

"As you are aware, there have been a great many panaceas offered for all the ills of our industry, especially with reference to labor; and among them is one that was offered by Mr. John D. Rockefeller, Jr., at the meeting in Atlantic City last December. Taken as a whole, this is a most estimable and able paper. There is one thought in it I wish to have you consider; and I will say that Witness No. 1 is John D. Rockefeller, Jr. I will read his testimony:

"The outstanding features of this plan of industrial representation are as follows:

"Representatives chosen by the employees in proportion to their number, from their fellow-workers in each plant, form the basis of the plan.

"Joint committees, composed of equal numbers of employees or their representatives and of the officers of the company are found in each plant or district.

"These committees deal with all matters pertaining to employment, and working and living conditions, including questions of co-operation and conciliation, safety and accident, sanitation, health and housing, recreation and education."

"And as I read the testimony of Mr. Rockefeller, I go back in my thought to the years just preceding the Declaration of Independence by these United States; and I would call your attention to the grounds upon which those who made that Declaration based their convictions, and that was that they had taxation inflicted upon them without representation. Taxation without representation! And that makes me look upon this as a reversal of that cry; and I find that Mr. Rockefeller suggests representation without taxation. That is, the committee of employees shall

take up matters pertaining to the employment and working and living conditions, including questions of co-operation and conciliation, safety and accident, sanitation, health and housing, recreation and education. That would be ideal if it was not for the fact that this committee on labor that is to take care of these matters is to shoulder the cost upon somebody else.

"I believe that labor and capital should go together on these questions, but I do not believe that the cost should be put upon one party.

"I do not believe that they have a right to representation without taxation; that some plan must be made by which they shall have to bear the burden of the lean years as well as the burden of the fat years; that when a business is greatly prospering, they have a right to share in that prosperity; but when a business is going down, they would have a right, and they should be made to take part, or share the reduction of income from those plants.

"I have no plan particularly to suggest, but I believe it should be an axiom that if they are to have representation on these boards, that they should be also compelled to share the evil years, or pay their part of the evil years that every business concern has to feel once in a while.

"My second witness is a gentleman whom three months ago we might have been divided upon as to our regard and respect for. Today we are all united. I refer to our late lamented former United States President, Theodore Roosevelt.

"At the Arlington Cemetery, on May 31, 1911, he said:

"So long as I have any influence left I shall protest against arbitration between this and any other country which will not keep its agreements. Arbitration is all well enough under favorable conditions, but not otherwise. It isn't right to arbitrate with a country when you know that that country will not keep an agreement if it comes to a pinch."

"Now, let me read that over again and put in the word 'organization' or 'association' instead of the word 'country'.

"So long as I have any influence left I shall protest against arbitraation between this and any other association which will not keep its agreements. Arbitration is all well enough under favorable conditions, but not otherwise. It isn't right to arbitrate with an association when you know that that association will not keep an agreement if it comes to a pinch."

"And I think Mr. Roosevelt's argument in reference to arbitration between countries applies as well to arbitration between associations.

"We are ready at all times, as an asso-

ciation or as individual builders, or as individual associations at least, in our various parts of the country, to be prepared to make agreements with associations; but if they will not live up to those agreements, but will break them when the pinch comes, then we are opposed to having arbitration with them.

"There is one more point, one more witness, and I will read his testimony before I state his name. He says:

"They must first of all be citizens, and that any man who owes a higher allegiance to any organization than he does to the Government should be sent to a Federal prison or deported."

"That comes from an alien whose Americanism is as sound as that of any American born in these United States. I do not know Ole Hanson. I wish I did. I wish I were acquainted with a man who could stand up as he has and say that the government of his city was going to settle the question as to whether or not the public shall be protected; and no labor, or even any other association, can interfere. But I want to say that if we take Mr. Ole Hanson as our guide—or, rather, if those in authority will take Mr. Ole Hanson as their guide, a great many of our troubles would be very readily and very quickly settled.

"In conclusion, let me say that a good bit of his argument can be as readily applied to master associations as it can to labor associations; in other words, we must live up to our agreements. We must endeavor to be fair, and then demand that others shall be fair with us."

**H**AVING traveled in the last six weeks all States in the Union except those of the Southeast, Henry N. Teague, Field Agent for the United States Department of Labor, reports to the Information and Education Service that industrial and labor conditions show a marked improvement during the last sixty days. This results, in Mr. Teague's opinion, from the fact that State and municipal authorities have come to appreciate the necessity for buffer employment for labor and the possibilities of stimulating business through extensive public improvements.

Mr. Teague has traveled, during the last six weeks, from Boston to San Francisco, and from Seattle to New Orleans, calling on all the Governors and on the Mayors of the principal cities and carrying a personal message to them from Secretary of Labor Wilson. When asked to state his outstanding impression from his trips, Mr. Teague said:

"There is to be a great deal of public building during the next six months. I am convinced the public improvements program for 1919 will equal that of any

five years in the country's history and the road-building activities from the Atlantic to the Pacific, once under way, are to be tremendous.

"I have been much surprised to find the scope of improvement work in the West larger than in the East. Perhaps this may be accounted for in the fact that the West needs more improvements than the East. It is newer country. The Governors and Mayors of the West, almost without exception, realize the prudence of going in for public improvements as a source of buffer employment for labor and a means of stimulating general business. The West, too, is much interested in reclamation and is anxious to make land, heretofore arid and waste, available and suitable for farming by such former soldiers as wish to go back to the soil."

"Most of the Governors of the agricultural States," Mr. Teague said, "are anxious to get men from the Army to settle in their States. This is because they believe the Army represents the best manhood and brains of the country, and if their respective States can absorb soldiers, the Governors believe the States will get the highest type of citizens and the best blood of the Nation."

Mr. Teague says there is much criticism in the West of the Federal Government's failure to go ahead with its own building operations. In many localities Federal buildings, for which sites, plans and appropriations were had before the war, are now held up because the original appropriations will not cover present construction costs on the buildings desired. Mr. Teague says, in such localities there is resentment over the fact that the Government has not been granted additional money to carry on these building activities, and the fact that this has not been done is exerting a harmful influence on many private interests, which feel that if it is prudent for the Government to refrain from building at this time, it also is prudent for the private interests to follow the same course.

"There are more building activities in New Orleans than in any other city I visited," Mr. Teague said; "New Orleans is spending \$14,000,000 on the municipal docks. More than 10,000 men are employed in this undertaking.

"I anticipate no labor crisis throughout the country, for the communities are awake to the situation. There is just as much unemployment today as thirty days ago, and yet the situation is much improved, because local initiative is being brought to bear on local problems, and as soon as the cities and States get under way with their improvement programs, for the time being at least, our unemployment problem will be far less pressing."

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Convent and School (alts. and add.),** 334 Haines street, Germantown. Architect, H. G. Hammer, 808 North Seventeenth street, Philadelphia. Owners, Our Lady of the Rosary Italian R. C. Church, care of Rev. Peter Montieni, on premises. Brick. ## For That Building Period Now at Hand

In the building lines quick deliveries are frequently imperative to keep high priced labor from waiting because of lack of materials.

The Barrett Company finds the Autocar unusually adaptable for general hauling and delivering.

With the Autocar, every load—large or small—is a paying load. Its balanced design and sturdy construction permit of a larger load in proportion to its weight. Less power is required to move the truck, and more power remains for the paying load.

Chassis  
\$2050

Because of its quickness and handiness, the Autocar saves you time as well as money.

More than 7000 concerns use the Autocar in over 400 lines of business.

The Autocar is backed up by a system of factory branch service stations that gives your investment complete protection.

## Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

## WILLIAM M. LLOYD COMPANY

Established 1868

29th and Ridge Avenue

PRIVATE individuals and corporations are responsible for most of the building activity in that section of the country east of the Missouri River and north of the Ohio, according to a statement just issued by the Division of Public Works and Construction Development of the United States Department of Labor. The building figures in the statement are for the first three weeks in February, and, while they show building activities far below the pre-war normal, they show, also, a marked increase in February over January of this year.

Contracts awarded during the first three weeks in February cover building and construction works to cost, approximately, \$92,000,000. The total of the January contracts was but \$50,731,000. February's increase over January, since the former figures are for three weeks only, will be more than \$50,000,000, or almost double the January figures.

New England is not making the showing Western districts are making. The New England States, during the first week in February, reported contracts awarded to the amount of \$331,000. In the second week the sum was \$554,000, and for the third week, \$662,000, making a total for the three weeks of \$1,537,000. The January total was \$4,648,000. The Department of Labor's statement makes this comment on the New England situation:

"The New England section contrasts in this respect with other sections of the country, especially the Middle West, where February is showing a large gain over January in the amount of contracts awarded. Of the contracts awarded during the week ending February 20, private construction was 94 per cent., while 6 per cent. was for Government construction, nothing in the way of municipal or State improvements being included. Of the private construction 22 per cent. was of an industrial character, 32 per cent. business, and 46 per cent. residential."

New York and New Jersey show a gain in February over January. During the first week in February this district reported contracts on building and construction work totaling \$3,716,000; during the second week, \$2,242,000, and in the third week, \$3,201,000. Total for the three weeks, \$9,159,000. The January total was \$8,152,000. Of the contracts awarded during the week of February 21, in money value, 71 per cent. was for private interests and 24 per cent. for State and municipal work, while Federal Government work was 5 per cent. Of the

private construction 78 per cent. was of an industrial nature and only 10 per cent. residential.

In Philadelphia, Baltimore and Washington and adjacent territory, contracts awarded in the first week of February were of a money total of \$2,187,000; the second week the total was \$1,577,000, and for the third week \$1,170,000, a total of \$4,934,000 for the three weeks. The contracts in January totaled \$15,805,000. This latter figure, however, was larger than the normal for January based on figures from 1910 to 1917. In that period the January contracts did not exceed \$10,000,000.

Ohio, West Virginia and Western Pennsylvania show contracts awarded in the sum of \$1,960,000 for the first week in February, \$3,363,000 in the second, and \$1,178,000 for the third week. As January shows contracts in the sum of \$7,916,000, if the district keeps up the February average for the last week in the month it will show a slight improvement over January. Residential building in this territory was 38 per cent. of the private building, which latter was 80 per cent. of the total.

Iowa, Illinois, Wisconsin, Indiana, Michigan, Missouri and Kansas, on the basis of the Department of Labor's figures, show approximately a five-fold increase in February over January. For the first week in February, in this district, the contracts reported totaled \$14,585,000; during the second week, \$8,383,000, and in the third week \$46,146,000. The three weeks' total is \$69,114,000. The January total was \$13,710,000. The Division of Public Works and Construction Development makes this comment on the Western figures:

"It is evident that the business men of the Central West are waking up to the fact that those who start building early this spring are not making any mistake in the matter of costs. Of the total of over \$46,000,000 for the week ending February 22, 91½ per cent. was private construction, 8 per cent. State and municipal work and a fraction of one per cent. Government construction."

Minnesota, North and South Dakota show an increase in February. For the first three weeks in February the contracts in this district total \$819,000, as against \$500,000 for the entire month of January. In the third week in February 90 per cent. of the contracts awarded were for private construction work, and of this 21 per cent. was for residential property.

## As The Editor Sees It

**D**ESPITE the doubts and fears entertained by many as to America's ability successfully to weather the readjustment period following the war, the country is steadily solving one problem after another. In a recent speech, Mr. Samuel M. Vauclain scored those who are fearful of the outcome of these trying months. "I have no fear for the industrial or commercial prospects of this country," said Mr. Vauclain. "Any alarm over the period of readjustment which must follow the war is, I think, without foundation.

"Any business can readjust itself within at least three months. Successful business must always be prepared to meet new conditions and the great businesses of this country are ready for the period of transition which will take place within the near future.

"There is no need to worry about the labor problem, if that problem is properly handled through the earnest co-operation of employer and employe. The employe must understand you; he must understand your business; he must be in sympathy with your purposes and there must be a mutual understanding if the interests of both are to be best served."

The National Association of Builders' Exchanges has already met this issue in a very definite way. The plan, based largely on suggestions by John D. Rockefeller, Jr., will comprise a central body to deal with labor questions and to be known as the Employers' Association. This body will, in turn, organize local boards, upon

whom the settlement of controversies will chiefly devolve.

"A spirit of co-operation," said John R. Wiggins, in discussing the plan, "is the purpose of the new scheme. We want to be able to meet the workers in a friendly, intelligent way, so that we can talk over our troubles and understand the viewpoint of each other. Wage scales will, if possible, be determined by contracts. Under the agreement of both parties, these contracts will be regarded as sacred under all conditions. This way of dealing with labor questions will, I think, avoid many costly strikes."

**A** PLAN has been inaugurated by the Department of Commerce by which it hopes to bring together the producer, the consumer and the laborer for the resumption of American trade on a wholly normal basis. It is the desire of the Secretary of Commerce to have the people of the United States thoroughly understand both the problem which faces the country, and the steps being taken for its solution.

The Council of National Defense is authorized to announce the creation, by William C. Redfield, of "The Industrial Board of the Department of Commerce." This Board will be charged, under the approval already given by the President to the Secretary of Commerce, with the stabilization of prices for basic materials in such a fashion as to create a firm foundation on which the consumer can base his future purchases and the producer

can form necessary production cost estimates. Its program will be supported by the Council of National Defense.

The full personnel of this Board, to consist of six carefully chosen men, will be announced as soon as acceptances have been obtained. Already it is assured that the Chairman will be George N. Peek, of Moline, Illinois, formerly Vice-Chairman of the War Industries Board. Hugh Frayne, the labor representative on the Board, was also on the War Industries Board as the representative of labor, while the official representative of the Government in the new organization will be Thomas C. Powell, Director of Capital Expenditures of the Railroad Administration.

Through proper investigation and stabilization it is expected that the foundation can be laid for the resumption of American business and for the furnishing of employment to returning soldiers and sailors—this through Government purchases, the publication of fair price lists, and co-operation of the producer.

To obtain this co-operation of the producer, it is planned that the Board shall call the various leaders of industry into consultation. The first of these conferences will be with representatives of industries producing basic materials, such as iron, steel, lumber, textiles, cement, copper, brick, and other construction materials.

It will be the endeavor of the Board to interchange views with these representatives of industry in the fullest and

freest manner possible. If these conferences result in a general agreement among the important basic industries upon proper prices and bases for prices at which sales will be made, and this agreement is approved by the Board, it is believed that the announcement of this fact will induce the nation to feel justified in properly beginning a buying program.

Such a procedure should, in substance, establish immediately a normal basis upon which to resume activities, and in this way the law of supply and demand be enabled to come into play, for, to quote Secretary Redfield, "It cannot be too strongly emphasized that the proposal that the Government shall co-operate in the determining of fair prices on basic commodities and in stabilizing these prices through Government purchases is in no sense a price-fixing program. No one will be under any sort of compulsion to adhere to the price schedules arrived at. If a producer can find a market for his wares at a higher price no one can prevent his being free to avail himself of it. If a consumer is able to buy below these prices, it will be his privilege to do it."

"In substance, we propose to bring capital, labor and the Government into common counsel together around one table and with one purpose—to do the best possible for the country."

The immediate need for carrying out Secretary Redfield's program is evident, for there exists at the present time an abnormal situation in the industrial world—a stagnation of business and industrial activity. Mills and factories are idle, or are producing but a small part of what they are capable of doing, and building operations are at a standstill. A large amount of unemployment exists, and this unemployment is increasing at such a rate as to challenge the best thought that can be given to the situation.

One of the striking features of the present situation is the high price demanded for practically all articles and commodities of trade and commerce. This high price condition is undoubtedly the cause of most of the business inactivity, and, therefore, also is the cause of the widespread unemployment of labor.

While living costs of the present are unusually high and will continue high until there are substantial reductions in the cost of the necessary staple foodstuffs, it is believed that there is satisfactory latent buying power in this country,—an abundance of money—but money that is not being used to employ or to purchase goods and materials.

This present condition has come about through a series of unusual happenings, due to the war. The industries and labor

of the country were diverted into new and unnatural channels, in order to mobilize all efforts possible. The capacities of many factories were expanded, new ones built, abandoned plants remodeled and put into production, and industry was managed and operated in accordance with war necessities—all largely under Government control.

This control and direction of effort and change of policies resulted in the complete suspension of the ordinary operation of the law of supply and demand. The demand for commodities and the necessary agreements with industries as to prices and terms of conversion of industry to war work had the effect of inflating prices to an abnormal extent, so as to encourage maximum production, even by producers operating under the greatest handicaps and at the highest costs.

Prices were advanced disproportionately, some articles showing increased selling prices over pre-war prices of 250%, while others showed but approximately 50%.

The law of supply and demand is really inoperative at the present time, for the reason that it is found difficult, if not impossible, for this law to resume normal functioning, on account of the fact that at the present time the price relations between the industries producing basic essentials are not properly adjusted to efficiently meet peace-time conditions.

It is, therefore, apparent that the trouble resulting in the present stagnant, unsatisfactory condition of industry is due to the continuance of the high, uneven, unstable prices of war times, which were, in many instances, agreed to by agencies of Government functioning for war purposes, and not to any unhealthy general condition. These abnormal prices still remain because there has been provided, up to this time, no agency to bring about the necessary reductions.

Under the conditions outlined a wise solution is equally important to the Government, to industry, and to labor, for their true interests are indissolubly connected and united that no detriment can be suffered by one without a harmful effect and reaction upon the others.

The vital need of the situation is resumption of industrial activity to the fullest extent possible, and it should be the aim to find the wisest and most effective way to accomplish this.

It is felt that the proper basis of selling prices for the present will be found to be upon a scale considerably higher than those of the pre-war days. However, the level should be established on the lowest plane possible, having due regard to industry, labor, and Government. The announcement of such a plane of

prices will immediately create confidence in the buying public.

It is believed that the reductions from the high prices to the proper level, so that consumers may be justified in buying, should be made at once by one reduction.

The effort should be to wholly eliminate the abnormal, unbalanced stimulation that business has had and the inflated prices that have resulted, and to start anew upon a normal level, and safely rely upon the law of supply and demand to govern future values. Such a policy adopted, and announced will, it is believed, when understood by the consumer, induce at once sufficient buying to start factories, fill empty yards and warehouses, and to inaugurate the interrupted building and other programs.

Industry and labor have a mutual interest in remedying present conditions, but industry should take the first step by the reduction of prices and commodities and should require of labor as little aid as possible.

#### SMALL INVESTORS IMPORTANT FACTORS IN BUILDING

Economists investigating present financial conditions for the Department of Labor agree with Mr. Walter Stabler, Comptroller of the Metropolitan Life, in the conclusion that more than ever before in financial history the small investor in the United States is to be an important factor in financing business and building. Mr. Stabler is quoted to the effect that large mortgage lenders are not plentiful in the market and borrowers must look to small investors, whose participations may be pooled under the trusteeship plan.

Mr. Stabler's statement, advertised by the Title and Guaranty Trust Company of New York City, was limited to the New York district, but investigations made by the Department of Labor through its Division of Public Works and Construction Development, suggest the conditions to which Mr. Stabler directed attention, is pretty general the country over.

Replies to a comprehensive questionnaire, recently distributed to a selected list of representative institutions throughout the country, indicate an absolute decrease during 1918 of funds available for investment in real estate mortgages, and indicate, also, a relative decrease since 1914 of funds so invested compared with the total resources of the institutions considered.

It is essential, in the opinion of the Department of Labor, to devise ways and means of availing of the small investors' capital, and for that reason the American Bankers' Association's plan, advocating

the adoption of amortization schedules for real estate loans, together with the Building and Loan Associations' agitation for a Federal system of "Home Loan Banks," have challenged the sympathetic interest of the Labor Department.

Just how to gather the comparatively small amounts of capital held by the small investors, and marshal them in amounts necessary to financing extensive building projects, is a problem which must be met by local initiative where the problem arises. The Division of Public Works and Construction Development points out that the small investors were the balance of power necessary to the success of the Government's war finance program, and they may now be made the balance of power in the reconstruction work of the nation.

The home builder—he who builds for his immediate use rather than for rental purposes—appears to be getting under way with his building plans. This especially is noted in the Central West. The home-building program will be facilitated and augmented if small investment money is made available for building loans. In one or two communities this is being attempted by private organizations, brought together for this sole purpose. In other and more numerous cases the regular banks are giving thought to the problem. The building and loan interests already have formulated a plan under which a system of Federal Home Loan Banks would enable them to rediscount their first real estate mortgages, and make available for further loans more than a billion dollars of their assets.

While the Department of Labor is endeavoring to co-operate with State and municipal authorities in getting under way road building and public improvements, and with private interests in their more extensive building operations, it is convinced that home building, for the use of the builder rather than for rental, must be looked to as an important factor in providing better employment for labor during the transition from war to peace production, and for the stimulation of business. For this reason the Department of Labor is making a determined drive for a nation-wide "Own Your Home" campaign.

#### NOT EVERYONE CAN REMODEL

It is almost an axiom that any architect can build a house, but not everyone can remodel and restore, says *House and Garden*, because restoration places upon both the architect and the owner the singular heritage of the past. That is why remodeling and restoration are a pleasant byway of architecture—a path off the beaten track that can be taken leisurely and is abundant with possibilities,

## IS THE COST OF CONSTRUCTION HIGH?

During the war about one-third of the country's industrial capacity, including man-power, was diverted to war production. To bring about this great diversion of industry two means were employed: stimulation and curtailment. Stimulation was practiced throughout the war and affected the prices of materials and the wages of labor, because Government contracts were awarded on a basis which permitted contractors to compete successfully with non-war manufacturers for materials and labor.

Curtailment was not important until early in 1918 except for the orders of the Fuel Administration and the Railroad Administration for the purpose of conserving fuel and transportation, and certain priority orders.

But in a statement of February 5, 1918, Secretary McAdoo requested that homes should not be built except in case of urgent necessity. The statement contained by implication the premises on which the radical curtailment of the building industry was later carried out, *i. e.*, (1) that conservation of materials, labor and credit was necessary in order to win the war, and (2) that the conservation must take place in those industries that were not essential, or only in part essential, to the winning of the war. Some time after the publication of Secretary McAdoo's statement, the policy of seriously curtailing non-war production was put into effect. Eventually the production of sixteen building materials was cut down 25% to 60%. Non-war construction was greatly restricted until it was almost completely stopped from September 3, 1918, until the armistice was signed. It was estimated by the Chief of the Building Materials Section of the War Industries Board that the non-war construction in 1919 would be not more than 10% of normal. This estimate indicates how great the diversion of labor and capital from the construction industry had been.

The stimulation of war industry and the curtailment of non-war industry was mainly carried out directly or indirectly by the Capital Issues Committee, the War Industries Board, and the War Labor Administration. Not only were prices of building materials affected by the stimulation of war industries, but in many cases also by direct price fixing. The same was true of the wages of labor. The power of the Government was exercised toward the lowering of prices of materials and the wages of labor in non-war industries in order to prevent labor and material from being drawn away from the war industries.

This brief sketch of the Government's

policy in stimulating war production and curtailing non-war production explains the difference between the cost of labor and of materials in the building industry and the cost of labor and of materials in general which was found to exist at the close of the war.

At the close of the war the index number of building materials, not including steel, had risen only 61% over the pre-war prices of 1913, while the index number for commodities, exclusive of building materials, had risen 113%. The average increase of wages in the construction industry in forty-one leading cities from 1914-1918 was only 28.5%, as against a rise of 94% in commodities. When the armistice came, there was, of course, a great volume of deferred construction projects, partly in the form of public works, partly in the form of semi-public utilities, partly in the form of housing and of commercial and industrial buildings. This volume of deferred construction represented in large part the curtailment of non-war production which had resulted from the diversion of one-third of the nation's industrial capacity to war production.

Fortunately, the return of peace did not mean the complete abrupt end of war production, yet it threatened serious unemployment. In order to minimize unemployment during the period of economic readjustment, the Government promptly removed the restrictions which it had imposed upon the construction industry. There is one indirect restriction, however, which it has not removed and could not remove, that is the moral obligation of the financial community to conserve credit until the Victory Loan is floated. Each bank, trust company, insurance company, etc., must estimate how large a part of its prospective allotment of the Victory Bonds it can sell promptly, and, consequently, how much of its funds it can afford to set aside for real estate loans or other purposes. The proportion so set aside for real estate loans will depend largely on the element of optimism which enters into every judgment concerning the future. There probably never was a time when, broadly speaking, optimism as regards industry was better justified or meant more to the country than at present. It is distinctly encouraging to the construction industry to note that optimism—reasoned optimism—is most emphatic in the literature published by the leading banks of national reputation, compiled for them by trained investigators.

Evidence of a helpful attitude on the part of banks towards real estate is not

wanting. In the great borough of Manhattan, in New York City, mortgages aggregating \$8,500,000 in value were extended (renewed) in January of this year, as against \$2,800,000 in January of last year. That is to say, the banks and insurance companies are not now, as they were a year ago, calling upon real estate borrowers to pay off loans in whole or in part.

Furthermore, 13,500 building permits were issued in 152 cities this January, as against 9,600 permits a year ago. The average value of the January permits this year was \$1,700, compared with \$2,800 in January, 1918. A year ago, it will be remembered, the Government was building extensively, and, besides, many factories were being erected for war production. Fifty-four per cent. of the cities showed gains in building this January over the preceding January. It is to be noted also that January, 1919, gained over December, 1918, although building permits are normally fewer in January than in December. The significance of these building figures is that there is a tendency to build extensions, to make structural repairs, and to erect inexpensive buildings, including particularly housing. The figures bear the characteristics one looks for at the beginning of a revival of the building industry.

It takes time for private building to get under way, and still longer for public works to get started in volume. However, the reports received from State, county and municipal officials justify the belief that an exceptional amount of public construction will be undertaken this year.

The turning of the tide in the construction industry that we have all been looking for since the armistice has unquestionably come. However, there are still obstacles in the way of its rise to normal. The most important of these is the high cost of construction as compared with the pre-war period. Not a few bankers and investors decline to consider a building project today merely because of the high cost of construction. Those who take this attitude do not generally stop to analyze the high cost of construction which alarms them so.

Although construction costs are higher now than in 1913, the union wage scales in the building industry have not advanced as rapidly as have the cost of living, while building material prices are not as high as are commodity prices. Wage increases in the construction industry, speaking generally, lagged behind because that industry was utilized to only a small degree in war production. The level at which the cost of construction stands today has been pushed up only slightly by temporary war conditions. It has been fixed mainly by conditions that

can not be materially changed for years to come—by the tremendous expansion of money and credit.

During the war the volume of money and credit increased far more rapidly than the volume of industry and commerce; hence prices rose. But expansion of credit through Government loans is a world-wide condition which must hold up prices everywhere until the Government debts are largely discharged.

The fact is that the cost of construction is not high today. It is low compared with food, clothing and commodities in general. It is high only in comparison with its own pre-war level. Commodity prices will undoubtedly recede because food and clothing and many other things were affected by special war conditions; for example, scarcity of transportation, which prevented shipments from distant countries to the Allies. But they can not fall to the pre-war level.

But, although some readjustments in the wages of individual trades and in the prices of individual classes of building materials may take place, the cost of construction will not come down to such an extent as to endanger a judicious investment made today in the erection of a new building. Where the rents offered will show a fair net return on the cost today of a new building after deducting a reasonable sinking fund allowance, no one should hesitate to build or to lend money for building.

Rents are determined by supply and demand. In the case of housing, during the early part of the war, the demand was curtailed by the rapid advance in commodity prices, which impelled many tenants to crowd into or get along with less space and their normal standard of living required, and by the drafting of the young men of military age. With a year, however, these influences had spent their force. By the end of 1919, according to the replies obtained from a questionnaire sent to real estate boards in 91 cities, only four of these cities had a housing demand that was below normal, while in 52 cities rents had advanced 10% or more, in some instances 40% to 50%. This rise in rents took place at a time when the population at home was as economical of house room as possible and while several millions of soldiers were absent in the service.

Another important fact was disclosed by the replies to the questionnaire, namely, that despite rising rents for housing in the majority of the 91 cities, the market values of house sites had declined in six cities, and had remained practically stationary in 72. The market value of land is, like rents, determined by the interplay of supply and demand. During the war the demand for city land was relatively small, because dealing in real estate was

discouraged by the banks as a non-war activity requiring the use of credit. With a restoration of easier mortgage loan conditions, the demand for real estate will inevitably increase; nothing can seem more certain than that in our growing American cities the market value of land must advance briskly.

A judicious investment in the erection of a new building does not depend solely on the cost of construction. It may well happen that the man who buys a lot today and builds on it a house the cost of which is not greatly out of proportion to the cost of the land, will be better off a year from now than he would be if he had left his money in the savings banks in the meantime. City land at present is least inflated of all material wealth.

#### ADVERTISE TO STIMULATE BUSINESS

THE Department of Labor urges upon American business men the starting of a national advertising campaign to restore manufacturing plants and retail trades to a high tide of prosperity. Roger W. Babson, Director General of the Information and Education Service of the Department, has directed the following letter, which explains itself, to William H. Rankin, of Chicago, Chairman of the Newspaper Division of the American Association of Advertising Agencies:

"It is the desire of the Department of Labor to stimulate business by suggesting to present advertisers that they increase their space and to prospective advertisers that they bring their plans to a head and start advertising immediately.

"The surest and quickest way to bring business to its pre-war basis is to overcome the general apathy to buying which exists in the minds of many people at present. Advertising will do this.

"We would like to see more retail advertising and more national advertising, and we believe that the press of the country and yourselves will appreciate the fostering of such a movement by the Department of Labor.

"May we ask you to prepare one or more advertisements for the Department of Labor carrying the message outlined. Your co-operation in this matter is earnestly desired.

"Publishers of newspapers and magazines of general circulation will be asked to run this copy over the signature of the United States Department of Labor, its Secretary, W. B. Wilson, and the Director General of Information and Education.

"Regarding the size and appeal to be used, this we believe is a matter which your own judgment will easily determine."

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Apartment House**, City Line and Lancaster avenue, Philadelphia. Architect not yet selected. Owner, Morris Estate, care of Girard Trust Co., Broad and Chestnut streets. Brick, stone, steel and concrete, will contain 100 apartments. Competitive plans will be submitted.

**Warehouse**, Second and Poplar streets, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owners, Loose Wiles Biscuit Co., Twenty-third and Arch streets, Philadelphia. Brick, 2 stories, 80x191 feet, slag roof, stone foundations, steam or hot water heating, electric lighting, concrete and maple floors, electric freight elevator, kalamein sash, kinnear doors, structural steel. Plans in progress.

**Residence (alts. and add.)**, Mermaid Lane and Navahoe streets, Philadelphia. Architects, Duhring & Ziegler, Bailey Building, Philadelphia. Owner, A. G. Allison, on premises. Stone, general alterations and additions. Architects taking bids, due March 22nd. Wolverton & Co., 28 East Willow Grove avenue; Fesmire Bros., Glenside, Pa.; Samuel Harting, 20 East Johnson street; F. B. Davis, 240 North Sixteenth street; W. John Stevens, Inc., Wyncote, Pa.; I. A. Dunkelberger, 71 East Herman street, are figuring.

**Residences (44)**, Fernhill street, Berkley to Apsley streets, \$149,600. Architect, private plans. Owner, Robert Killough, Wayne and Duval streets, Germantown. Brick, 2 stories, 15 feet 10 inchesx32 feet, slag, tin and slate roof, hot water heating, electric lighting, tile work. Owner will build.

**Garage**, Frankford avenue, north of Columbia avenue, \$25,000. Architect, private plans. Owner, John M. Kennedy, Jr., 1001 Chestnut street, Philadelphia. Brick, 1 story, 97x160 feet, slag roof, cement floors, electric lighting. Owner will build.

**Convent and School (alts. and add.)**, 334 Haines street, Germantown. Architect, H. G. Hammer, 808 North Seventh street, Philadelphia. Owners, Our Lady of the Rosary Italian R. C. Church, care of Rev. Peter Montiani, on premises. Brick. School, three-story addition, 26x28 feet, slag roof, yellow pine floors, stone foundations, electric lighting, plumbing, plastering, galvanized iron work. Convent, raising roof, changing partitions, plastering, painting. Architect is taking sub-bids. Owner is taking bids. Fred Elvidge & Son, 5522 Germantown avenue, are figuring.

**Stores (2) and Garage**, Fifty-fifth and Woodland avenue, Philadelphia. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owner's name withheld. Brick, 1 story, 86x120 feet, mill construction, composition roof, electric lighting, cement work. Architect will sub-let.

**Store and Dwelling**, 3130 North Twenty-second street, Philadelphia, \$5,000. Architect, private plans. Owner, D. Espisito, 3023 North Twenty-first street, Philadelphia. Brick, 3

stories, 17x48 feet, slag roof, hot air or steam heating, electric lighting. Owner will build.

**Residence (alts. and add.)**, Old York Road and Boulevard, Philadelphia. Architects, Simon & Simon, 249 South Juniper street, Philadelphia. Owner, Edwin Stott, 429 North Sixth street, Philadelphia. Stone and brick, slate and tile roof, stone foundations, hot water heating, electric lighting, tile and marble work, rolled steel sash, cement, tile and composition floors, ornamental iron work. Architects have received bids.

**Garage**, 521-531 North Orianna street, Philadelphia. Architect, Carl P. Berger, 1416 South Penn Square, Philadelphia. Owners, North Liberties Co., care of architect. Brick, mill construction, 1 story, 78x106 feet, slag roof, yellow pine floors, steam heating, electric lighting metal lath, electric elevators, fire doors. Architect will take bids in a few days.

**Store Building (alts. and add.)**, 1013 Market street, Philadelphia. Architects, Hoffman & Co., Finance Building, Philadelphia. Owners, International Millinery Co., 366 Fifth avenue, New York City. General interior and exterior alterations and addition. Plans in progress. Too early for details.

**Column Foundations (68)**, Front street, between Arch and Callowhill streets. Architect, private plans. Owners, City of Philadelphia, Department of City Transit, 1211 Chestnut street, Philadelphia. Concrete. Owners taking bids, due March 25th at noon. Edw. Fay & Son, 2 South Mole street; Standard Const. Co., 1713 Sansom street; Fred T. Buckius, 4050 Kensington avenue; American Paving and Const. Co., 207 South Ninth street; J. S. Rogers Co., Drexel Building; Snyder Phillips Co., 273 West Mt. Pleasant avenue, Mt. Airy, Pa.; Geo. F. Pawling Co., 1432 South Penn Square; Edw. H. Vare Co., 1120 Race street; O'Rourke Eng. Co., 17 Battery Place, New York City; E. Pascuzzi, 601 Lincoln Building; Joseph Lombardi, 601 Lincoln Building; Wm. Mundy, 228 South Alder st.; Edw. Atkins, 249 South Twenty-fourth street; Robbins Cont. Co., Lafayette Building; M. H. & J. McHugh, 892 North Markoe street; Jos. Perna, 334 North Sixty-fifth street; M. H. McCloskey, Jr., 1620 Thompson street; C. A. Conan, 1402 North American Building; Wm. Steele & Sons Co., Sixteenth and Parkway; Keystone State Const. Co., Franklin Bank Building; Hugh Nawn Const. Co., Camden, N. J.; Connors Bros. Co., 15 West Ninety-first street, New York City; Brown-King Const. Co., Commercial Trust Building; Robt. Lombardi, Lincoln Building; Michael McCullough, 2409 Sharswood street; Donato De Lisc, 4842 North Leithgow street; Monaghan & Losse, Inc., 3016 Chestnut street, are figuring.

**Caretaker's Lodge House**, Bartram Gardens, Fifty-second and Botanic avenue. Architect, Jos. A. Roletter, City Hall, Philadelphia. Owners, Bureau of City Property, Room 216 City

Hall, Philadelphia. Brick and stone, 2 stories, 28x26½ feet, slate roof, hot air heating, hollow tile. Owners taking bids, due March 20th at noon. Deposit of \$5.00 required. Hogg Const. Co., 1634 Sansom street; Bowden Const. Co., 1713 Sansom street; E. C. Durell, 1713 North Twenty-fourth street; Mitchell Bros., 2125 Race street; Albert Zellfelder, 151 South Broad street; W. O. Springer, 1624 Latimer street; Monaghan & Losse, Inc., 3016 Chestnut street, are figuring.

**Cementing Cellar Floor**, Independence Hall, Philadelphia. Owners, City of Philadelphia, care of Geo. E. Datesman, Director, 216 City Hall, Philadelphia. Owners taking bids, due March 20th at noon. Deposit of \$5.00 required. Hogg Const. Co., 1634 Sansom street; Bowden Const. Co., 1713 Sansom street; E. C. Durell, 1713 North Twenty-fourth street; Mitchell Bros., 2125 Race street; Albert Zellfelder, 151 South Broad street; W. O. Springer, 1624 Latimer street; Monaghan & Losse, Inc., 3016 Chestnut street, are figuring.

**Roof and Skylight Repairs**, City Hall, Philadelphia. Architect, Jos. A. Roletter, City Hall, Philadelphia. Owners, City of Philadelphia, Bureau of City Property, Room 216 City Hall, Philadelphia. Consists of general repairs to roof and skylights, copper work. Owners taking bids, due March 20th at noon. Deposit of \$5.00 required. Hogg Const. Co., 1634 Sansom street; Bowden Const. Co., 1713 Sansom street; Mitchell Bros., 2125 Race st.; Albert Zellfelder, 151 South Broad street; W. O. Springer, 1624 Latimer street; Monaghan & Losse, Inc., 3016 Chestnut street, are figuring.

**Residence and Bakery (add. and alts.)**, Thirty-first and Page streets, \$8,000. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owner, J. Smuekler, Sixth and Poplar streets, Philadelphia. Brick, 1 story addition, 28x24 feet, slag roof, composition floor, tile work, fire brick ovens, metal ceiling, electric lighting. Plans completed. Owner will build.

**Stores and Apartments (15)**, Frankford, Philadelphia. Architects, Lachman & Murphy, Drexel Building, Philadelphia. Owner's name withheld. Brick, 3 stories, 20x70 feet, slag roof, stone foundations, steam heating, electric lighting, tile work, yellow pine floors, ornamental terra cotta, metal bulks. Architects taking bids. Ketcham & McQuade, 1029 Brown street; Hogg Const. Co., 1634 Sansom street; John M. Yardley, 1716 Sansom street; Wills-Ludwick Co., 1708 Sansom street; Nardi Co., Bulletin Building, are figuring.

**Residences (31)**, Twelfth and Loudon sts., Philadelphia. Architect, private plans. Owner, Wm. B. Erb, care of H. H. Wehmeyer, 509 West Cumberland street, Philadelphia. Brick, 2 stories, 45x14 feet, steam heating, electric lighting, hardwood floors, slag roof. H. H. Wehmeyer, 509 West Cumberland street, is taking sub-bids.

**Lumber Questions.**

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

## MAYOR OF INDIANAPOLIS URGES IMMEDIATE RESUMPTION OF BUILDING

Hon. Charles Jewett, Mayor of Indianapolis, Ind., in a statement issued by the Information and Education Service of the Department of Labor, urges the immediate resumption of building activities as an aid to business and insurance against general unemployment of labor. Mayor Jewett says his city will go ahead with municipal work and pleads for the courage and determination essential to mastering the obligations which come to the country as the price of peace. In his statement made to a representative of the Division of Public Works and Construction Development of the Department of Labor, Mayor Jewett said:

"We are well aware of the fact that the war cost this country an enormous sum of money—a far greater sum than we, as individuals, can conceive. The demands of war must be paid at whatever cost. We must not overlook the fact that our immediate responsibility is to discharge the cost of peace. Our country responded enthusiastically to every demand made upon it to meet the cost of war. Now that we enjoy the blessings of peace, we should be equally patriotic and enthusiastic in discharging the obligations that naturally come to every community in the readjustment of our entire community life.

"There is hesitation on the part of some in extending business enterprises on account of the prevailing high prices of labor and material. This is evidenced in the building industry. This line of business activity has been at a standstill for two years. A revival of building enterprises will reach into the industrial field a very great distance. It involves setting into motion the wheels of industry which manufacture and produce steel, lumber, brick, cement and all other building material and building equipment which goes into the construction of such work. This means opening up employment for thousands of men in these various manufacturing plants.

"The cost of labor and material is higher than before the war, but there is no reason to believe that these costs will be subject to a perpendicular reduction. It is more reasonable to believe that any

decline in these costs will be gradual and not abrupt. The war raised greatly the plan of costs. Wages are higher, materials are higher and living necessities are correspondingly higher. These increased costs are all relative. Therefore, a gradual reduction of the entire cost plane is to be expected rather than an abrupt decline in any line of costs. This being true, the chance of investors and builders suffering financial loss because of building at prevailing prices, is remote.

"A stimulation in the building industry and in public improvements will be of immeasurable benefit to every city. It

will absorb the unemployed and keep the community in an active, healthy state. In the war business concerns felt a responsibility to the nation and the city to hold their business organizations together, even at a sacrifice. This was a part of the cost of war. Now that we have peace, the same policy can be applied with the same excellent results, and may well be considered as a part of the cost of peace. If we hold back and wait for low prices before we again become active, we shall defeat the very object we seek to attain. We shall lose the money we sought to save."

## DEMANDS FOR, AND OBSTACLES TO BUILDING

SEVENTY-FOUR cities have returned to the United States Department of Labor questionnaires on building needs and obstacles in getting building under way. Fifty-seven of these cities show a pressing demand for building, and most of these emphasize the shortage of dwellings and apartment houses.

Typical of the representations in this particular are the following: Portland, Maine, reports a shortage in dwelling and tenement houses; Haverhill, Lawrence and Salem, Mass., report a demand for dwellings and tenements; Albany, N. Y., needs flats, Manhattan needs office, dwelling and storage buildings; Rochester needs dwellings and mercantile buildings; Atlantic City, East Orange and Elizabeth, New Jersey, are short in dwellings and apartments, and almost all the towns in Pennsylvania reporting show a deficiency in residences.

Ohio, Indiana and Illinois show a shortage in dwellings, with an occasional report on demands for schools and factories, and the major percentage of shortage in Colorado, Utah, Washington and California is in dwellings. In the South and Southwest there is a demand for business building, this being especially noticeable in Texas and Louisiana.

Scranton and Wilkes-Barre, Pa.; Newark, Ohio; Wheeling, W. Va.; Bloomington and Danville, Ill., report no demand for buildings, indicating present facilities are adequate to current needs.

Tacoma, Washington, was the only city reporting no delay on account of wages, material prices, interest rates and available capital. Tacoma's obstacle was inclement weather and subsequent reports from the State of Washington indicate

preparations for unusual building activity for the spring season.

The questionnaires, which were sent out by the Division of Public Works and Construction Developments of the United States Department of Labor, were calculated to verify the results of other investigations into the building shortage of the country and to develop what, if any, obstacles were being encountered by building interests. Specific information was asked on the influence of wages, material prices, interest rates and available investment capital. Several cities reported that it was none of these which was delaying building, but rather the uncertainty of the future labor and material market. A majority of the cities assert that high wages are a factor in holding back building; there is almost unanimous concurrence in the opinion that high prices of materials are determined obstacles. There is not much complaint about interest rates, but 14 cities report builders are having difficulty in obtaining capital to finance projects.

This latter obstacle appears not to be a sectional matter, but rather one growing out of local conditions in widely separated territory. Cambridge, Mass.; New Haven, Conn.; Albany, N. Y.; Philadelphia, Pa.; Terre Haute, Ind.; Wheeling, W. Va.; Aurora, Ill., are among the cities reporting difficulty in borrowing capital for building work.

Wherever building industry organizations have gone into the subject, the conclusion has prevailed that no decrease in labor wages may be expected for some time to come—not until the general price level on living necessities drops. The investigations of the economists in the Department of Labor, supported by no less an authority than Prof. Irving Fisher, of Yale University, assert no marked reduc-

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**  
Tasker Street Wharf, Delaware River, Philadelphia.

tion may be expected in building material prices. Prof. Fisher asserts we are on a new and higher price level, from which, in the main, we shall not recede. "We are on a *permanently* higher price level," says Prof. Fisher, "and the sooner the business men of the country take this view and adjust themselves to it, the sooner will they save themselves and the nation from the misfortune which will come, if we persist in our present false hope."

After setting out the circumstances and developments on which this conclusion is based, Prof. Fisher concludes

his study of the situation with this: "Business men should face the facts. To talk reverently of 1913-14 prices is to speak a dead language today. The buyers of the country, since the armistice, have made an unexampled attack upon prices through their waiting attitude, and yet price recessions have been insignificant. The reason is that we are on a new high price level, which will be found a stubborn reality. Business men are going to find out that the clever man is not the man who waits, but the one who finds out the new price facts, and acts accordingly."

and nation, and are more vitally interested in the welfare and prosperity of both.

2. That during the readjustment period such a movement hastens the return of normal conditions; results in much-needed construction for home and industrial purposes; provides work for returning soldiers and sailors and for labor changing from war to peace industries; stimulates all lines of business in each community, creates general prosperity.

The fact that all these are patriotic in purpose does not eliminate the certainty of their being materially profitable to the local communities and, in the long run, the community which makes it easiest to build and cheapest to build, will reap the greatest material benefits.

Not only has the Department of Labor set out in detail the plan for a successful "Own Your Own Home" campaign. It is preparing publicity matter which is to be placed at the disposal of the local committees and will, where communities can show such action is necessary to the inauguration of the campaign, send an expert to assist in the organizing and getting the movement under way.

The "Own Your Own Home" movement, as outlined by the Department of Labor, was one of the propositions submitted to the recent conference of Governors and Mayors in Washington, where it met with enthusiastic encouragement and support, many of the Governors and Mayors expressing the determination to return to their districts and interest themselves in getting such campaigns under way.

Among the national organizations which have pledged support and co-operation for the "Own Your Own Home" work are the General Federation of Women's Clubs, through its President, Mrs. Josiah Evans Cowles, of Los Angeles, Calif.; the National Association of Real Estate Boards and the National Federation of Construction Industries.

Requests for "Own Your Own Home" campaign literature should be made to the Division of Public Works and Construction Development, United States Department of Labor, Washington, D. C.

## "OWN YOUR OWN HOME" CAMPAIGN PLANS ANNOUNCED BY U. S. DEPARTMENT OF LABOR

COMPLETE plans, adaptable to any city in the United States, for an effective "Own Your Own Home" campaign, have been formulated by the United States Department of Labor and the literature is now ready for distribution through the Division of Public Works and Construction Development of the Department. Twenty cities already are getting under way with their drives for home building and home owning.

To supervise the formulation of these plans, Paul C. Murphy, of Portland, Oregon, for two years working on "Own Your Own Home" work, was brought to Washington. In consultation with Department of Labor officials and several of the leading authorities on building in the United States, Mr. Murphy has drafted the campaign manual, now available for such cities and individuals as are interested in promoting home owning.

The "Own Your Own Home" Bureau in the Division of Public Works and Construction Development will serve as an advisory board to the managements of these local campaigns, where requested, and will extend the fullest co-operation to every city in the country which undertakes a campaign.

Briefly, the campaign plan contemplates a General Committee made up of civic and industrial leaders, with someone whose standing in the community justifies his selection, as the chief executive official.

Under this general committee are such sub-committees as have been found essential. The manual suggests the prudence of having vigorous committees on Finance, Publicity and Campaign Methods, Mercantile Institutions, Public Serv-

ice Corporations, Education, Religious Activities, Industrial Workers and Labor Unions, Hotels and Restaurants, Exhibits and Management of Headquarters, Women's Clubs, Speakers and Meetings, Poster Contests, Civic Bodies, Theaters and Amusements, Transportation and Automobiles, Industrial Plants, Music, Printing and Supplies and Donations.

The function of each committee is explained in detail in the Department's manual, together with suggestions on handling specific problems which invariably develop in the "Own Your Own Home" campaign.

In the Department of Labor's plan of campaign the women, churches and labor organizations play an important part. The entire campaign is pitched on a civic betterment plane rather than on a purely commercial basis, and the appeal is more on the line of what each business group can put "in," rather than what it can get "out" of the movement. It is a one hundred per cent. Greater City movement, having in mind only the incalculable permanent benefits to the community and the immediate helpfulness to the nation during the transition from war mobilization to peace production. The Department of Labor emphasizes these benefits which may be expected from the "Own Your Own Home" movement:

1. It will provide better living conditions, increase efficiency, encourage thrift, give greater comfort and happiness and create individual reserves for misfortune and old age. Every house owner with his family, whether rich, poor or well-to-do, becomes thereby a better citizen, with increased self-respect, independence and responsibility to the city

### REGISTERED ARCHITECTS OF ATLANTIC CITY, N. J.

The Society of Registered Architects of Atlantic City, N. J., was organized recently to establish uniform professional fees for architectural services and to promote the building art of Atlantic City.

Temporary officers were elected as follows: Wm. Riebenach, Chairman; Bertram Ireland, Secretary.

Portland Cement, Sand or Gravel by carload. Consult DAVID FRANCE CO.,

(147)

### Bricklayers, Masons, Plasterers

#### DO YOU

use the hod carrying method of elevating brick, mortar, cement, etc.? It's too old fashioned—too slow and cost-

ly—for present day building work.

"LITTLE GENERAL" MATERIAL ELEVATOR HOISTS are used by dozens of bricklayers in Philadelphia, who used to rely on the hod carrier method, which was expensive and unsatisfactory. Now they use a "LITTLE GENERAL" and save money.

Several bricklayers have told us they saved the price of the "LITTLE GENERAL" on the first job.

"LITTLE GENERALS" in Philadelphia stock ready for immediate delivery.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

Elevator operates in an opening 26" x 60". Easy to erect, easy to take down and move, convenient to store.

Phone for prices and special discount.

## As The Editor Sees It

EVERY day the conviction becomes stronger in our minds that building must go on; that construction work of all kinds is essential as a means of employment for labor no longer needed on war contracts and for men returning from the camp and overseas. Furthermore, since the Governors and Mayors conferred with Federal officials in Washington on the industrial conditions of the country, there appears to be a more determined conviction in the building industry that present prices of material and labor are not going down in the near future. This conviction is reflected in the increase in building activities and construction work. Incomplete data on March contracts suggest the possibility of the March total being in excess of the total for February, which was, in turn, quite an increase over the contracts of January.

While State and municipal construction works are playing an important part in the acceleration of business throughout the country, private and corporation influences are responsible for most of the present building activities. Much road work, especially in Indiana, Illinois, Ohio and Iowa, appears to be held in abeyance in the hope of an early adjustment of freight rates on road materials.

Among the building projects brought to the attention of the Division of Public Works and Construction Developments of the United States Department of Labor during the week were the following:

The City National Bank of Galveston, Texas, will begin the construction of a new building to cost approximately \$135,000.

Manhattan Beach Estates, near New York City, are to be improved immediately by the erection of seventy-five concrete bungalows.

The International Association of Machinists, Washington, D. C., has let a contract for a seven-story and basement office building to cost \$300,000.

The Central Savings and Loan Company of Youngstown, Ohio, will erect a fifteen-story building to cost approximately \$1,000,000.

M. A. Fisher, of Oakland, California, will rush to completion a circular dancing hall of steel and concrete with space for six stores. It will cost \$300,000.

The Western and Southern Life Insurance Company, of Cincinnati, Ohio, will spend \$300,000 in adding several stories to its present building. This improvement is announced as the company's contribution to the Government's building program and pupils of art and architecture in the recognized schools of the city have been asked to compete in designs that will carry out the present style of architecture.

Work on the new public hall in Cleveland, Ohio, halted by the war, has been resumed by the letting of a contract for \$79,000 for the foundation. Soldiers are given preference on the job.

In Springfield, Ohio, a project involving practically \$1,000,000 is under way.

New building for the Y. M. C. A. and the Masonic Temple will be constructed on a centrally located corner.

Canton, Ohio, announced for the month of February eighty-six permits, aggregating \$357,450. This exceeds 1917 by more than \$300,000.

A new building for patients of the Davis-Fischer sanitarium in Atlanta, Georgia, will be erected at a cost of \$140,000.

Pueblo, Colorado, will build a new City Hall. Bids have been opened and work will be started within a short time.

The Liggett & Myers Tobacco Company has acquired 600 feet frontage in Danville, Va., and will begin at once the construction of a factory.

James Butler, owner of the Ormonde and Seminole apartment house in New York City, which comprise a block front on Broadway, between Sixty-ninth and Seventieth streets, will remodel the buildings for a hotel at an estimated cost of \$600,000.

Joseph Fabian, proprietor of the Regent and Garden Theatres in Paterson, N. J., has acquired possession of the property in Newark, N. J., on which the building of the Star-Eagle is located, and will build immediately a motion picture theatre with a capacity of 3,300.

The Methodist Episcopal Church, which has pledged itself for a fund of \$100,000,000 to carry on world reconstruction work, will spend \$1,000,000 in Baltimore, Md., according to an announcement made by the Rev. Hamilton

P. Fox, of the Fayette Street Methodist Episcopal Church, of that city.

Permits for 202 two-story brick dwellings were issued in Baltimore, Maryland, in the month of February. They represent a cost of \$406,150.

**H**ENRY N. TEAGUE, Field Agent for the United States Department of Labor, returned recently from a trip including all the principal cities from Boston to San Francisco. Giving his impression of that trip, which we printed in an earlier issue of THE GUIDE, Mr. Teague said that there is much criticism in the West of the Federal Government's failure to go ahead with its own building operations. This feeling is not confined to the West, however, and at the Governors' and Mayors' Conference, Mr. R. J. Wheeler, of Allentown, Pa., said in his address:

"The Government has a great housing project at Bethlehem, which has been stopped on account of economy, mind you, they say. There are 15,000 men working around in that section, and this would give employment to 4,500 men for three months. There are people enough living in Bethlehem, Allentown and Easton to occupy all of those houses. In South Bethlehem eleven people are living in one apartment. That is twice as many as good housing permits. The Government is advising us what to do, and then, in the interest of economy, they say, after having poured billions into doubtful enterprises, they are leaving this job go by unfinished, and scrapping it, when the houses are partly finished, and could be finished without the loss of any money, and would give employment to 4,500 men for a period of three months, and would afford housing for hundreds of families that need it. While we are learning, the Government ought to take some of its own advice—take some of its own medicine."

Mr. Pigott, representing the Mayor of Seattle, Washington, presented noteworthy suggestions. "I would advise the Mayors and Governors," said Mr. Pigott, "the Mayors of the different cities, first, to call together your leading merchants. Make it your duty and your business to do it, and insist in the most forcible language that you can use, if necessary, that they must reduce the cost of living, the essentials and necessities of life, anywhere from 15 to 25 per cent., and they can do it—that is the important thing today—and they can do it without reducing the wage.

"Now, the next thing to do is to discuss these propositions with your business men, your manufacturers and employers of labor. As I have been in the manufacturing business, I realize that for the last four years we have been running

night and day. We have allowed our machinery to run down; we have not renewed any machinery and have not made any improvements or any enlargements. Why? Because we were too busy, and in that time we did not lose any money. Now, if you will intercede and discuss this matter with the different manufacturers of your cities and say, 'Now, here; while we know that your orders are scarce and your business is shut down for want of appropriation, we want you as good citizens to start immediately to make the necessary repairs you deferred during the boom. Make the necessary improvements and make the necessary repairs that you contemplated—and if you do that, gentlemen, you will find in all of your towns employment for thousands of men who are now idle in the streets.'

"Today it is a mooted question whether the Government is going to retain the railroads for one, two, three, four or five years, or whether it is going to turn them back to private ownership. The thing we are interested in is not so much whether they are going to turn the railroads back to the owners or whether the Government is going to continue to operate the railroads for three or five years; that is not the thing that interests us most. The thing that interests us is to find out what the Government wants to do and what they are going to do, so that we can work accordingly. You know that for the last five years, in the manufacturing plants of the United States, the Government has made no repairs to rolling stock; their road-bed is run down, they have built no new side-tracks for extensions, and if you can induce the officials in the great States and cities of the country, and the United States Government, to establish the policy at once the number of men who can find employment on the railroads alone in America will represent probably one million.

"This Government some five or six years ago undertook to build a railroad in Alaska. The road as planned is about 515 miles long; it has been planned and surveyed. There was an appropriation of \$35,000,000 made for the construction of that road from the salt water to the river. The Government has already spent about \$31,000,000 on that road, and there it is. Two-thirds of the road built is being washed away day by day. \$31,000,000 spent, and it would take \$10,000,000 more—in fact, \$9,500,000 more—to construct and finish that railroad; and if they could get it today they could do it. What has been the result? On two-thirds of that great road today all work is stopped just because this Government of ours did not have the time to pass an appropriation at this session of Congress to continue and complete the road.

"Now, gentlemen, I have been associated with business and have been in the

manufacturing business ever since I was a boy, and I know whereof I speak, and I tell you that it is not necessary at this present moment to reduce wages, either for the purpose of reducing the cost of living or for the purpose of reducing building material, so that you can go ahead with your building projects. Knowing what I do about the cost of the different materials that go into the construction either of buildings or roads, I know that it is possible to reduce the cost of building material today anywhere from 10 to 33 1-3 per cent., and without reducing the rates of wages.

"Now, the next great problem I would undertake is that of the irrigation and the reclamation of the public lands. We have a great country west of the Rocky Mountains where it is possible to put millions and millions of acres of ground under cultivation, although coming from the Northwest, we have no interest in what State nor what place you make your improvements. We want the improvements made where they can be made to the best advantage of all."

#### NO APARTMENT HOUSE WORTHY OF MEDAL

After a careful examination of the merits of the 160 apartment houses erected in Cleveland in 1916, the Jury on Apartment Houses of the City Plan Committee of the Cleveland Chamber of Commerce has returned the following verdict to the Sub-Committee on Medal Awards:

"The jury have failed to find any example which is free from the harshest criticism, is unanimous in the opinion that the Cleveland apartment houses are doing less than any other class of building to enhance the beauty of our city, and therefore recommend with regret that no medal be awarded for the 1916 group of apartments."

"As laid down in the program set by the sub-committee on medal awards," the report amplifies, "the buildings were scored on sanitation, on plan or the adaptation of space to use, and on aesthetic value."

#### PERSONAL NOTES

C. E. Schermerhorn, architect, announces resumption of practice at 430 Walnut street, Philadelphia. Mr. Schermerhorn completed his services with the Military Intelligence Station, Plant Protection Division, General Staff Corps, United States Army. His work was very highly praised by Edmund Leigh, Chief of the above-mentioned department.

Calvin Young, architect, Reading, Pa., has moved his offices to 520 Washington street. Mr. Young wants catalogues of architectural and building materials and specialties.

Andrew C. Borzner, architect, will resume practice at 717 Walnut street, Philadelphia, after April 1st. Mr. Borzner has been with the International Shipbuilding Corporation at Hog Island, where his services were of great value.

## THE WAR MEMORIAL—SHALL WE MAKE IT SOMETHING WORTH WHILE?

BY CHARLES H. CHENEY.

A great problem confronts every community of the country. Architects, sculptors, landscape architects, city planners are being called in by civic committees; money is being subscribed with a lavish hand that the nation's dead and wounded may be honored and the great victory of humanity fittingly commemorated.

The form that these monuments shall take is now everywhere being discussed and it seems our duty to keep clearly before these committees and the public an understanding of the fact that these monuments may be made as perpetual a living force and value to future generations, as the great principles which led us to victory.

There seems to be a general demand that the large sums to be expended shall go into something that will be useful to the community, rather than into the dead monuments of granite and bronze, such as cluttered the country after the Civil War, and not only meant little after that generation was gone, but were often of such poor inspirational or artistic appeal as to become an incubus to the community possessing them.

Liberty buildings, community centers, victory boulevards, memorial highways, commemorative hospitals and similar constructively useful undertakings are suggested as more appropriate substitutes by foremost citizens, newspapers, and interested organizations from Cleveland to San Francisco, and from Portland to Atlanta.

Will the architects, and sculptors particularly, of this country realize their highest civic duty, and help their respective communities to make the best use of these funds so sincerely contributed? We believe they will not only do that, but will also take the lead in so directing public attention.

In practically every comprehensive city planning project in this country the civic center has been a feature. This in a sense gave a physical center to the city's aspirations for civic betterment of all sorts. Here in one group would be found the city hall, the postoffice, the public library and in some larger cities an auditorium and art gallery. But very seldom have these civic centers been made to function also as true community centers—that is, as places to which the people would come for dances, semi-public meetings, etc., and places where the civic agencies such as the Betterment Commissions, the local Red Cross, etc.,

could have their headquarters. In the possibility of bringing this phase of community life to the civic center there is a new chance for city planning to prove its usefulness.

When the war started many people thought that such projects would be lost sight of until peace came. On the contrary a great impetus has been given to many such movements in unexpected ways. The Community House idea, particularly, has gained greatly through the activities of War Camp Community Service. This organization was created to provide wholesome recreation and comfort for soldiers and sailors in towns adjacent to the army cantonments and army and navy posts. It has organizers and representatives in more than three hundred cities, and has stimulated entertainment work for men in uniform in more than six hundred cities.

The War Camp Community Service has acted as the leaven in arousing civilian responsibility to meet the emergency created by the proximity of the camps. It has brought into each camp community trained social workers who enlist the interest and active co-operation of the townspeople. The local organization usually brings together representatives from the Rotary Club, the Chamber of Commerce, the most active churches in the city, the leading woman's club, and any other body which seems especially fitted to co-operate. This organization in turn appoints committees made up of men or women, or both, to mobilize every facility the community affords for the comfort, pleasure or welfare of soldier and sailor guests. One of its first tasks is to secure the opening of at least one soldiers' and sailors' club, where men in uniform can lounge, read or write, play games, obtain soft drinks, dancing, bathing and shaving facilities, etc.

It is not a far step from such a club, which is really a center for social and recreational life of soldiers and their friends, to the similar social and recreational center for all the people in the community. Some of these clubs have indeed turned out to be in fact community centers. When the camp is at a distance from the nearest city these clubs may be like the Community House at Camp Sherman, Chillicothe, Ohio. This has an immense central lounging room, while in one wing is a restaurant and in another wing a theatre with audi-

torium and stage. There are also the usual administrative offices, cigar stand, news stand, kitchens, etc. To this center come most of the relatives and friends who wish to meet soldiers in the camp. Incidentally, it may be added that a number of dormitory buildings adjoin the main Community House. The rooms in these are rented to visiting friends of the men in camp who desire to stay more than a single day.

A Community House which is more typical of what will doubtless come after the war is that at Manhattan, Kansas. Here a brick building was erected through the joint efforts of War Camp Community Service, the district Rotary Clubs, which contributed \$16,000 to building and furnishings, and the city, which, though only 7,500 in population, bonded itself for fifteen or twenty thousand dollars to complete the necessary funds. This building will be used primarily as a soldiers' club during the balance of the war period and will be run by the War Camp Community Service organization. When peace comes, it will revert to the city of Manhattan and will be used exclusively as a community center. Already a great many community social functions and semi-public meetings are being held there. It has been called appropriately "Club House of Democracy." It is, indeed, a common meeting-place for all the residents of the city.

As a type of memorial peculiarly valuable to a city, though built before the war, the Community House at La Jolla, near San Diego, California, might well be duplicated with profit in many places. Erected at a cost of \$42,000 in the Spanish Renaissance style typical of Southern California, this building contains a little theatre seating 350 people for meetings, with a stage suitable for real dramatic productions, among which were recently included "The Doll's House" and similar plays. There are also facilities for almost every activity of the community, including library, reading rooms, billiard rooms, showers and lockers for both men and women, kitchen and dining room, club rooms, dressings rooms and first aid rooms. Adjoining the building is a completely equipped playground, which cost \$32,000 equipped, containing an outdoor gymnasium for boys and one for girls, slides, swings, wading pools, ball courts, baseball diamond, tennis courts, etc., the latter of which are used for dancing two nights a week with an average attendance during war times of 500 couples.

War Camp Community Service has stimulated several other communities to start building similar centers, and the idea is spreading throughout the country. In any case, it is certain that scores,

if not hundreds, of such buildings will be erected in the years immediately following the war. It seems, indeed, that hereafter no city planning scheme will be complete without provision for such a social center.

The proposed perpetuation in enduring form of the Liberty Temple in Portland, Oregon, and of similar buildings, seems possibly more appropriate than any other of the memorial suggestions offered. The Liberty Loan organizations in every city of the country have perfected such marvelously successful working committees, the women's committees for War Savings Stamps drives and the other groups working for community camp service, etc., have built up something that is infinitely precious, something we cannot afford to allow to become disorganized and which is now just as necessary for the successful development of the home community in peace times.

What could be more useful, more permanently valuable and at the same time more appropriately commemorative of our war sacrifices and efforts, both at home and abroad, than the building of such a permanent Liberty Temple, not only in Portland, but in other large cities? Built in enduring materials, enriched in decoration and design, with a few conveniences added, it could, at no great cost, be a permanent downtown center for all civic drives. Its open room or auditorium could easily be made also a little theatre for intimate plays, chamber music, community chorus work, civic committee meetings and the like.

Similar ideas seems to be in mind in other parts of the country. Mr. H. S. Bottenheim, editor of the "American City Magazine," recently made the following suggestions:

"The erection of mere monuments or statues in acknowledgment of the great debt which the American people owe the soldiers and sailors who are giving all they have for the cause of Democracy, would be an entirely inadequate tribute to a glorious sacrifice. To help the living while commemorating the dead is the purpose of the plan to build in every community, after the war, a neighborhood house to be known as a Liberty Building and to be used as a center of public service, fellowship and recreation for all the people, thus symbolizing the Democracy for which their fellow townsmen shall have fought.

"Now is the time to begin the work which will make this ideal a reality. There is money to be pledged, there are designs to be drawn and building sites to be secured, and organizations must be formed for the administration of the community buildings. The construction of the buildings can be made of help in

the period of labor adjustment which will follow the war. The experience of civic and commercial bodies and war service organizations during the war will be of aid in financing and administering the buildings. The enthusiasm and patriotism of all the people can find expression in connection with the making of these new homes for Democracy."

Other respected civic authorities strongly fall in with this idea, as follows:

"In my boyhood every village had its 'liberty pole' on which its flag was raised. I think those poles were set up all over this country after the Revolutionary War and were called 'liberty poles' to commemorate our independence. The name served a good purpose. The establishment of 'Liberty Buildings' as community houses throughout the country will serve a splendid social purpose, and the name is most fitting." Lawson Purdy, President, National Municipal League.

"The idea of promoting the erection all over the land of community buildings to be known by some name which will associate them with a memorial thought seems to me to be a most excellent, patriotic and timely thing now to propose. No monument, I believe, could be devised which would serve as a memorial so well, while at the same time very greatly advantaging the community spirit, the community service and the community solidarity upon which our prosecution of after-war prosperity must depend." J. Horace McFarland, President, American Civic Association.

The general adoption of this proposal would solve a problem about which some of us have worried considerably: That is, how to avoid the building of hundreds of such distressing and tenth-rate monuments as followed the Civil War. This would also provide a living memorial to each community's soldiers, which would be both dignified and useful to generations to come. This suggestion also seems to provide a method of financing the erection of Community Houses in many cities. Immense sums of money will be raised for memorials during the next few years, and it would be a blessing if this could be diverted to some constructive use.

The possibilities of such a Community House as a center of local recreational and social life, and as a focal point for all sorts of betterment projects, are unlimited. Naturally such organizations as the local Red Cross, local center of the Forum movement, the recreation and play-ground commission, the charity commission and other community associations, would have their headquarters in the building. There is no reason why there should not be some special committee of well-known people to be in

charge of the Community House, similar to the central committee which has charge of entertainment and recreation work for soldiers in hundreds of American cities now. At present these are organized by a representative of War Camp Community Service, and it is not impossible that after the war there will be a similar organization which will put trained workers in the field for community work instead of merely activities for men in uniform. This larger central committee could have sub-committees on community dances and similar social affairs. This work should be extended so that the Community House will be a center also for the arts. For instance, the office of the community sing leader should be here, and each Community House should contain a completely equipped theatre, (not the sort that architects have been putting into school houses all over the country, but with stages equipped under expert advice as to what the new arts of the theatre demand in the way of lighting, stage space, etc.). There should also be a gallery built into the Community House, in each city which is too small to have a separate art gallery. Perhaps some of the rooms which are used for social purposes could be so designed that their walls could be utilized for exhibition space. This would avoid the expense of separate exhibition rooms. To such galleries The American Federation of Arts, The Art Alliance and other organizations would gladly send three or four traveling exhibits each year. There is, indeed, no department of community interest, in social life or economics, recreation, or the arts, which could not profitably be centered at this one point. In other words, this Community House should be a clearing-house for the community life of the city.

Secretary Lane of the Department of the Interior has said that the returning soldiers must be brought back to the land and to the small community. It would seem that the only way to accomplish this is to make small-town life more attractive—to bring there something of the freer social life, the cultural life, the music, the art, the theatre productions and other features of the larger city. A Community House, democratically run, free from political or religious prejudices, and including a dance floor, a theatre and a gallery, would go far toward curing the old social and artistic stagnation in small American communities.

A member of the War Camp Community Service in New York City also writes us: "Let me add something about the ways in which this problem particularly affects the architect. It seems to me that the Community House, more

## Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

## WILLIAM M. LLOYD COMPANY

Dwelling, \$400, 2308 Lombard street. Charles L. Blucknell (O), premises. J. F. Trent (C), 2041 Master street.

(Continued from Page 162.)

than any other type of building, would give American architects opportunity to show their originality and their sense of fitting a building to its purpose. To me it would seem a calamity if a model Community House were designed by some Beaux Arts architect here in New York, and sent out to cities all over the country. I believe that each town should have something distinctive of its own life and traditions. Even a general adherence to monumental, classic or renaissance style would be a great mistake. I can see, in the hundreds of Community Houses to be built, the possibility of a revival of some of the finest traditions of Colonial architecture in the New England and Southern states and perhaps a fine adaption of the Spanish-American tradition in the southwest. If the public would fully realize this, we might obtain at last something approaching in the aggregate, a national American architecture."—"The Architect and Engineer."

The illustration shows the installation of the famous "Star" Ventilator on the War Trade Board Building, Washington, D. C.

## "STAR" VENTILATOR (Patented)

The "Star" Ventilator was adopted by the U. S. Government as its War Standard for cantonments and other important buildings, on account of its HIGH EFFICIENCY and SIMPLICITY.

The Thousands of "Star" Ventilators in use on public buildings, schoolhouses, mills, warehouses, and similar structures throughout the country, proves their superiority over other types.

We also manufacture Evans "ALMETL" Fire Doors and Shutters, Metal Tiles and Shingles, approved by the U. S. Gov., and High Grade Roofing Tin.

## As The Editor Sees It

Presented in the Pennsylvania Senate March 24th, the act to regulate the practice of architecture in this State will undoubtedly enhance the dignity of the architectural profession. It will give the bonafide architect right to label his work "Registered Architect," and will prevent the indiscriminate use of the term architect.

Certainly engineers or architects can find little if any objection to the provisions of this Act. The framers of the bill have given most thoughtful consideration to all the phases of the measure and deserve the commendation of the architectural profession and the building trades.

We quote the act as introduced verbatim:

An Act to regulate the practice of architecture in the Commonwealth of Pennsylvania; by providing for the examination and registration of architects by a State Board of Examiners; defining the power and duties of said Board of Examiners and providing penalties for the violation of this Act.

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same, that within ninety days after the approval of this Act, the Governor shall appoint a State Board of Examiners of Architects, which Board shall be composed of five architects, who have been in active practice in the State of Pennsylvania for not

less than ten years previous to their appointment.

In making the first appointments under this Act, the Governor shall appoint one of the said members of said Board to hold office for a period of one year, one to hold office for a period of two years, one for three years, one for four years and one for five years. In case a successor is not appointed at the expiration of the term of any member, such member shall hold office until his successor has been duly appointed and has qualified. In the event of any vacancy occurring in the membership of said Board, in any manner other than by expiration of term, the Governor shall fill said vacancy by an appointment for the unexpired term. The members of said Board shall, before entering upon the discharge of their duties, subscribe to and file with the Secretary of the Commonwealth, the constitutional oath of office.

Section 2. The said State Board of Examiners of Architects shall meet for organization within ninety days after its appointment, and shall elect from its membership a President, a Secretary and a Treasurer.

The said Board shall adopt all necessary rules, regulations and by-laws, not inconsistent with this Act and the Constitution and laws of this State or of the United States, to govern its times and places of meeting for organization and reorganization, and the holding of examinations, the length of the terms of

its officers, and all other matters requisite to the exercise of its powers, the performance of its duties and the transaction of its business under the provisions of this Act.

The said Board shall impress upon the certificates of registration issued to registered architects under this Act, the seal of the Commonwealth of Pennsylvania.

Section 3. The Secretary of the said Board shall keep a true record of all proceedings of the Board and may employ such clerical assistance as the Board may deem necessary.

The said Board shall be charged with the duty of enforcing the provisions of this Act and may incur such expenses as shall be necessary, all of which shall be paid out of the funds and the manner hereinafter mentioned and provided. The said Board shall file with the Governor annually a full report of its operations.

Section 4. All fees provided for by this Act shall be paid to and receipted for by the Treasurer of the Board, to be by him held as a fund for the use of the said State Board of Examiners of Architects, and to be paid out by him only upon the written order or warrant of the President and Secretary of the Board. Said Treasurer shall give a bond to the Commonwealth for the use of said Board, in amount and with such conditions as the Board may prescribe. The accounts of the said Treasurer shall be audited by the Auditor General's Department.

All expenditures of the said Board shall be paid from the funds received un-

der the provisions of this Act and shall in no case be paid from the State Treasury.

It shall be the duty of the Board of Commissioners of Public Grounds and Buildings to provide and furnish suitable quarters in the City of Harrisburg, for the transaction of the business of the said Board of Examiners.

The said Treasurer may retain in his custody at any or all times such sums as may be necessary to defray the expenses of the Board, but all moneys in his hands in excess of the sum of Twenty Thousand Dollars (\$20,000.00) on the first day of June of each year shall be paid by the Treasurer of the said Board into the State Treasury.

Each member of said Board of Examiners shall be entitled to receive as a part of the expense of the Board, Ten Dollars per diem while actually engaged in attendance at meetings or in conducting examinations, the members shall receive also, the amount of actual traveling, hotel, clerical and other necessary expenses incurred in the performance of their duties under this Act. In addition to the above per diem allowance the Secretary and Treasurer shall receive salaries which shall not exceed Five Hundred and Two Hundred Fifty Dollars per annum, respectively.

Section 5: Three members of the Board shall constitute a quorum, but no action at any meeting shall be taken without at least three votes in accord, and the regular and special meetings of the Board shall be called and held in the manner and at the times and places prescribed in its rules, but at least two meetings shall be held each year for the purpose of examining applicants for Registration.

Section 6. Any person residing in, or having a place of business in this State, who, upon the date of the approval of this Act is not engaged in the practice of architecture in the State of Pennsylvania, under the title of "Architect," shall, before engaging in the practice of architecture, or being styled or known as an architect, secure from said Board of Examiners a certificate of his or her qualifications to practice under the title of "Architect," and be duly registered with said Board as provided by this Act. Any properly qualified person who shall have been engaged in the practice of architecture, under the title of "Architect" for at least one year prior to the date of the approval of this Act, may secure such certificate, and be registered, in the manner provided by this Act. Any person holding a certificate and being duly registered pursuant to this Act may be styled or known as a Registered Architect. No other person shall assume such title or use the abbreviation R. A., or any other words, letters or figures to indicate that

he or she is a Registered Architect. Any person who shall have been engaged in the practice of architecture under the title of "Architect" for a period of one year prior to the approval of this Act may continue so to do without a certificate or registration, provided that an affidavit setting forth these facts be filed with the Board of Examiners and satisfactory proof of competency be presented, but such person shall not be styled or known as a Registered Architect.

Section 7. Any citizen of the United States, or any person who has declared his intention of becoming such citizen, or any citizen of another country complying with the requirements of this Act for aliens, being at least twenty-five years of age and of good moral character, may apply for academic or technical examination or certificate and registration under this Act, but before being admitted to the technical examination, shall submit satisfactory evidence of having completed the course in a high school approved by the Board of Examiners or the equivalent thereof, and having completed such courses in mathematics, history and language as may be determined by the Board of Examiners, or shall pass a satisfactory examination in such branches. Examinations for the above academic requirements shall be held by the Board of Examiners.

The Board of Examiners may accept satisfactory diplomas or certificates from approved institutions covering the courses required for academic examination.

Upon complying with the above requirements and before receiving a certificate or being registered, the applicant shall satisfactorily pass an examination in such technical and professional courses as may be established by the Board of Examiners, unless said applicant be entitled to such certificate and registration without examination as provided in subsequent provisions hereof. The Board of Examiners may in lieu of all examinations accept satisfactory evidence of any one of the qualifications set forth under subdivisions "A" and "B" of this section.

A. A diploma of graduation or satisfactory certificate from an architectural college or school that the applicant has completed a technical course approved by the Board of Examiners, and has had at least three years' satisfactory experience in the office or offices of a reputable architect or architects.

The Board of Examiners may require applicants under this subdivision to furnish satisfactory evidence of knowledge of professional practice and supervision of work.

B. Registration and certification as an architect in another State or country

where the qualifications required are equal to those required in this State.

C. The Board of Examiners may grant a certificate of qualification to, and register, without examination, any one who has been engaged in the practice of architecture in this State for at least one year prior to the date of approval of this Act as a member of a reputable firm of architects or under his or her own name, or to any one who has been engaged in the practice of architecture as an employee for at least five years prior to the date of approval of this Act, provided that applicants under this subdivision shall present satisfactory proof of competency and qualifications and evidence as to character, and provided that the application for such certificate shall be made within two years after the date of approval of this Act.

Any architect, who has lawfully practiced architecture for a period of more than ten years without the State shall be required to take only a practical examination which shall be of the nature to be determined by the Board of Examiners.

Any architect, who is a citizen of a foreign country and who seeks to practice within this State, and who has lawfully practiced architecture for a period of more than ten years, shall be required to take a practical examination as determined by the Board of Examiners, or if in practice for a period of less than ten years shall obtain a certificate and registration by satisfactorily passing academic and technical examinations or by presentation of certificates or diplomas from recognized schools showing achievement by applicant satisfactory to the Board of Examiners.

Every person applying for examination or certificate of qualification and registration under this Act shall pay a fee of Twenty-five Dollars to the Treasurer of the Board of Examiners.

Said examination said be conducted by the full Board or by one or more members of the same duly delegated by said Board, or otherwise as may be determined by the said Board.

If such applicant shall successfully pass such examinations, or shall bring himself or herself within the provisions of subdivision "C" above, the said Board shall issue to such applicant, under the seal of the State, a certificate of qualification to practice architecture in the State of Pennsylvania, which said certificate shall be signed by the President and Secretary of the Board and shall be in such form as may be prescribed by said Board, but the same shall contain the name of the successful applicant, his or her place of business and the words, "Admitted to practice Architecture in the State of Pennsylvania the ..... day of ....., 191 .."

Section 8. The Secretary of the Board shall keep an official register of all certificates of qualification to practice architecture issued under the provision of this Act, and of the renewals of the same as hereinafter provided for, which register shall be properly indexed and shall be open to public inspection and information.

Section 9. Each original certificate issued and registered under the provisions of this Act, shall authorize the holder thereof to practice architecture as a Registered Architect throughout this State, from the date of the issuance of said certificate until the last day of June next succeeding the date upon which the said certificate was issued, unless said certificate be revoked for cause as hereinafter provided.

Section 10. Each architect receiving a certificate of qualification under the provisions of this Act, shall annually in the month of June, during the time such holder shall desire to continue the practice of architecture as a Registered Architect in this State, apply for a renewal of said certificate, whereupon the said Board shall issue to such architect, in such form as the said Board may provide, a renewal of said certificate for the term of one year, and such renewal shall be duly registered by the Secretary of said Board in the official register of the Board hereinafter provided for.

In the event that any holder of a certificate of qualification to practice architecture shall neglect or fail to have said certificate renewed in the manner herein provided during the month of June in each and every year, the right of such architect to practice as a Registered Architect in this State, shall cease and determine on the last day of the month of June during which said certificate should have been renewed under the provision of this Act, and it shall be the duty of the Secretary of the said State Board of Examiners of Architects, to give notice, in writing, of the expiration of such certificate to the holder thereof and make a proper entry on said register, showing the expiration of such certificates.

Any holder of a certificate of qualification to practice architecture, which has been suspended under the provisions of this Act, may obtain a renewal of such certificate at any time within one year from the date of its expiration, upon application to and the approval of the State Board of Examiners of Architects; and upon obtaining such approval and receiving such certificate shall pay to the Secretary of the Board, a fee of Ten Dollars. The time of renewal may be extended at the discretion of the Board of Examiners.

Section 11. The said State Board of Examiners of Architects may, by unani-

mous action, revoke any certificate of qualification to practice architecture, issued or renewed under the provisions of this Act, for incompetency or recklessness or for neglect of duty in the practice of architecture, or for dishonest practice on the part of the holder thereof.

Any architect holding a certificate of said Board of Examiners of Architects, against whom any of the foregoing charges may be preferred shall be furnished by the said Board with a copy of the charges, and shall be entitled to a hearing before the said Board, at which witnesses may be examined respecting the guilt or innocence of the person accused.

In the event that said certificate is revoked by said Board, the Secretary shall make proper entry and registration of the fact of said revocation, and shall give notice in writing of such revocation to the holder of said certificate.

At any time after the expiration of six months from the date of revocation of said certificate and upon the payment of all costs incurred by said Board, the person whose certificate has been revoked, may make application to the said Board of Examiners of Architects, for a new certificate, and the said Board, upon receiving evidence, which, in its opinion would warrant the granting of a new certificate, may at its discretion, issue a new certificate upon the payment to its Treasurer of a fee of Ten Dollars.

Section 12. Every holder of a certificate shall be required to sign all his or her drawings as a "Registered Architect."

Section 13. On and after July 1st, 1919, it shall be unlawful for any person in the State of Pennsylvania to enter upon the practice of architecture in the State of Pennsylvania, or to hold himself or herself forth as an architect or as a "Registered Architect," or to use any

other word, or any letters or figures indicating or intended to imply that the person using the name is a "Registered Architect," unless he or she has complied with the provisions of this Act and is the holder of a certificate of qualification to practice architecture issued or renewed and registered under the provisions of this Act.

And after two years from the date of the approval of this Act it shall be unlawful for any person who had been engaged in the practice of architecture for a period of at least one year prior to the approval of this Act to continue such practice without complying with the provisions of this Act applicable to persons engaged in the practice of architecture for a period of at least one year prior to its approval.

This Act shall not be construed to prevent persons other than Architects from filing applications for building permits or obtaining such permits, nor shall it be construed to prevent such persons from designing buildings and supervising their construction, provided their drawings are signed by the authors with their true appellation as engineer or contractor or carpenter or etc., but without the use in any form of the title of architect.

Section 14. Any person violating any of the provisions of this Act shall be guilty of a misdemeanor and upon conviction thereof, shall be sentenced for the first offense to pay a fine of not less than Fifty Dollars, nor more than One Hundred Dollars, and for a second or any subsequent offense, shall be sentenced to pay a fine of not less than Two Hundred Dollars, nor more than Five Hundred Dollars, or to undergo an imprisonment in the County Jail, of not more than one year; either or both, at the discretion of the Court.

## INVESTMENT BUILDING

BY W. R. SAFFORD

**B**OTH architects and builders are not always mindful that an apartment building is usually a strictly commercial proposition. That is, apartment buildings are built primarily to earn a profit for the owner and not merely to produce architectural monuments to the skill and taste of the architect.

If a butcher buying a side of beef at a certain price should retail the different cuts to his customers at less than what the beef cost him in the first place he would prove a failure. No matter how exemplary he might be as a humanitarian, as a business man he would be a fool. Butchers don't do business that way.

Yet, there are owners of flat buildings who put their good money into a proposition with the expectation of receiving a reasonable income from the investment, but who eventually find they have put in more than they can take out; and there are many architects and builders who aid and abet them in their money-losing schemes.

Partly the fault of the architect who designs too expensively and partly the fault of the builder who constructs without economy, it is also much the fault of the owner, because he doesn't conservatively figure out his investment before making the plunge.

You may hire experts to do your plan-

ning, but you will find no man quite so able to safeguard your money as yourself, Mr. Owner. It is up to you to check up your experts and see that your investment in an apartment building shows a proper percentage of profit before you go ahead.

You, Mr. Architect, and you also, Mr. Builder, can greatly assist the owner in making his legitimate profit if you will advise him faithfully along profitable lines and remember, above all things, that he is not a philanthropist. He is probably looking for a safe and profitable return on his money. If you do not understand his point of view and are not sufficiently skillful to solve his problem along these lines, then you ought not to be posing as an expert in apartment house work.

Of course, the problem of flats to rent for profit in a small town is quite different from what it is in a large city. Your tenants in a small town are of a very different class from those in a city; their requirements are not at all similar and the price they will pay for what they want fluctuates from the height of extravagance in the fashionable section of a large city to the tightest of economy in a modest little town.

With a certain lot in mind on which it is planned to erect a building for commercial purposes to yield the utmost of profit for the owner, an expert should first get the lay of the land to determine what sort of tenants it will pay to go after. That is, he should understand from knowledge of the section of town in which the property is located, what class of people will be most attracted by his proposition. If they are humble working people, probably unable to pay more than twenty or twenty-five dollars a month, he must figure the kind of building that can be built to yield the maximum of profit at that rent. If after people who can spend money liberally, he must spread himself accordingly, and provide them with something more luxurious—a plan to make higher rents possible.

It is only after careful study of the problem in this way that the expert, be he builder or architect, can intelligently advise the owner. Whatever proposition is put up to the investor should be carefully figured out as to first-cost, cost of maintenance and net yield in profits, so that the owner may be assured of a profitable investment.—*National Builder*.

**I**NDUSTRIAL conditions in Europe, with special reference to the building business, are being investigated by R. R. Otis, of Atlanta, Ga., a member of the Employers' Industrial Commission of the United States Department of Labor. Mr. Otis is one of the most prominent builders in this country, and

the information he obtains abroad will, it is expected, be of great value to the trade.

The Commission was sent abroad under the auspices of the Information and Education Service of the Department of Labor, and its aim is to collect data from European sources which will enable the United States to profit from what has been experienced and what is being accomplished abroad in the interest of better relations between employer and employee, and in the interest of business as a whole.

One of the subjects that will be investigated is the methods of the Government and the attitude of the employers in handling problems of production that arose during the war. Special reference will be made to the adjustment of labor disputes, both as to wages and to labor's voice in management.

Of more immediate value, perhaps, will be the further investigations, covering industry as a whole, regarding the attitude of the Government and the plans of employers in connection with reconstruction. Problems of unemployment, of wages and of participation in managerial control will be studied in particular.

The commission is headed by E. T. Gundlach, of Chicago, representing publishing interests, and includes, besides Mr. Otis, R. J. Caldwell, of New York, prominent in textile interests; W. H. Ingersoll, of New York, who is in the jewelry industry, and Dorr E. Felt, of Chicago, who is connected with the office appliances and machinery interests. The Commission will remain in Europe about a month longer, from present indications. Dr. Royal Meeker, Commissioner of Labor Statistics, accompanies the Commission as economic adviser.

## CONTRACTS LET SHOW IMPROVEMENT IN BUILDING AND CONSTRUCTION ACTIVITIES

**O**N the basis of the money value of contracts let during the month of February, building and construction work rapidly is approaching the normal for this season of the year. A memorandum for the Economics Section of the Division of Public Works and Construction Development has been made public by the U. S. Department of Labor, in which the February figures are compared with those of pre-war years. The statement is as follows:

"For some months previous to November, 1918, the total money value of building and engineering contracts awarded was about the same as for the corresponding months of the two previous years and larger than for the same months in the years 1914 and 1915.

"Reducing the money values for the years 1914 to 1917 to present costs, the 1918 amounts were about equal to the average for the previous four years. It must be remembered, however, that one-third of the contracts awarded during the year 1918 were for Government work.

"Expressed in million dollars, the money cost of construction in November for the years 1914 to 1918 was as follows: 1914, 46; 1915, 88; 1916, 122; 1917, 94; 1918, 130. Reducing these figures to the basis of 1918 prices, and expressing in the nearest millions, they appear as follows: 1914, 88; 1915, 136; 1916, 169; 1917, 108; average for four years, 120. Since the amount for 1918 was 130 million dollars, it is evident that, with Government work included undoubtedly to quite an extent, it was about the normal amount.

"In December, the hesitation following the signing of the armistice and the expectation of falling prices began to be felt. The actual figures for December for the years under consideration were: 1914, 42 (million); 1915, 83; 1916, 113; 1917, 91; 1918, 57. Reduced to 1918 prices, the four preceding years appear as follows: 1914, 63; 1915, 127; 1916, 57; 1917, 105; average for four years, 113 million. The amount for 1918 was 57 million, or fifty per cent. of this average.

"The January figures of the actual contracts awarded are 1915, 43; 1916, 63; 1917, 91; 1918, 152. Reduced to the basis of 1918 or present prices, these appear to be: 1915, 66; 1916, 87½; 1917, 105; 1918, 152; average for the four years, 103. The amount for January, 1919, was 51 million dollars, still about fifty per cent. of the average.

"The actual money values of contracts awarded during the month of February were: 1915, 49; 1916, 66; 1917, 95; 1918, 147. Reduced to the 1918 or present basis of prices, these are as follows: 1915, 76; 1916, 92; 1917, 110; 1918, 147; average for the four years, 106. As the amount for February, 1919, was 95 million dollars, it appears that this was 90 per cent. of the average for the four preceding years.

"If we include 1913 and 1914, with actual amounts of 70 millions and 39 millions respectively (103 and 59 when reduced to basis of present prices), the average for six years becomes 98 millions and the present February is about 97 per cent. of this average."

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residences (8)**, Sixty-second and Osage avenue, Philadelphia. Architect, William Lowenthal, 1208 Chestnut street, Philadelphia. Okner, Charles E. Biddle, Real Estate Trust Building, Philadelphia. # Barrett Specification Roofs

## All Over Detroit—

**N**EW office buildings, school buildings and industrial plants are the order of the day in busy, fast-growing Detroit.

When it comes to roofs for these buildings, Detroit wants the kind that can be *forgotten* for 20 years or more—no leaks or repairs or maintenance expense to worry about. That is why every one of the buildings shown on this page is protected with a Barrett Specification Roof.

Of course, we can show here but a few of the Barrett-covered buildings in Detroit. There are many more.

For commercial, industrial and municipal buildings Barrett Specification Roofs are so much better *so much cheaper per year of service*, and offer so much more in fire protection, that they cover more of such permanent structures than any other kind, not only in Detroit, but in every city and town in America.

### Actually Guaranteed for 20 Years!

**W**E offer a 20-Year Surety Bond *guaranteeing* Barrett Specification Roofs of 50 squares or over in all towns of 25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity & Guaranty Company of Baltimore and will be furnished by us without charge. Our only requirements are that the roofing contractor shall be approved by us and that the Barrett Specification dated May 1, 1916, be strictly followed.

☐ **Get a copy of the "Barrett" 20-Year Specification,** with roofing diagrams sent free on request. ☐

## Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

## WILLIAM M. LLOYD COMPANY

Established 1868

29th and Ridge Avenue

PHILADELPHIA

tion, Bethlehem, Pa. Brick, concrete and stone, 2 stories, 150x200 feet, composition roof, cement and wood floors, warm air heating, electric lighting, terrazzo work. Architect will be ready for bids in three weeks.

# Bricklayers, Masons, Plasterers

**DO YOU**

use the hod carrying method of elevating brick, mortar, cement, etc.? It's too old fashioned—too slow and costly—

for present day building work.

"LITTLE GENERAL" MATERIAL ELEVATOR HOISTS are used by dozens of bricklayers in Philadelphia, who used to rely on the hod carrier method, which was expensive and unsatisfactory. Now they use a "LITTLE GENERAL" and save money.

Several bricklayers have told us they saved the price of the "LITTLE GENERAL" on the first job.

"LITTLE GENERALS" in Philadelphia stock ready for immediate delivery.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

Elevator operates in an opening 26" x 60". Easy to erect, easy to take down and move, convenient to store.

Phone for prices and special discount.

## As The Editor Sees It

NOW, as always, "honesty is the best policy." In the present crisis in business conditions, honesty with ourselves in facing the situation before us, is of the utmost value to ourselves, our fellow citizens and our country. Experts everywhere agree that a new era is at hand; an era full of unprecedented prosperity and boundless opportunities. But, it is also an era of new conditions; new price levels have been established, new labor conditions have arisen, and from all quarters come the plea and advice to adjust ourselves to these new conditions. Are we meeting these issues squarely? Are we honest with ourselves? We repeat over and over again that things can never be what they were. "No, indeed," we say, prices will not go back to the old levels; wages must be kept high so that labor can continue to exist. We must spend our money and adjust ourselves to the new conditions; business must be kept going." Then what do we do? Probably we put our money back in our pocket and hope that prices *will drop*. "Prices are not coming down in America," says Vice-President Marshall in *Leslie's*:

"The manufacturer who is halting upon the theory that the bottom is going to drop out of raw material will find the bottom out of his business before it is out of raw material. The retail merchant who is waiting until he can purchase cheaper goods will have his

store closed by the sheriff and no way to get the cheaper goods upon his shelves.

"The man who has denied himself and stinted himself during the period of the war and is now husbanding his resources upon the theory that prices are going to take a tumble may succeed in washing his shirt to shreds before he can buy a much cheaper one."

"Shall problems of readjustment and reconstruction destroy our progress and defeat our resolution?" asks Frank A. Vanderlip.

It is inconceivable. All that we need is individual courage and confidence.

"The belief in prosperity is its creation."

Now is the time to act; we have had enough of talking. We agree with the *Manufacturers' Record* that:

"Procrastination is more than a thief of time, it is the murderer of opportunity."

\* \* \*

EIGHTEEN cities are organizing for an Own-Your-Own-Home Campaign along the lines suggested by the United States Department of Labor. Campaigns either are in progress, or about to open in Billings, Mont., Charleston, W. Va., Chicago, Ill., Cleveland, Ohio, Denver, Colo., Jacksonville, Fla., Johnstown, Pa., Lynchburg, Va., Middletown, Conn., Milwaukee, Wis., Philadelphia, Pa., Portland, Oregon, Salt Lake City, Utah,

Seattle, Wash., Spokane, Wash., Staunton, Va., St. Paul, Minn., and Toledo, Ohio.

In each of these cities there is a determined shortage in dwellings and the Own-Your-Own-Home Campaign is being waged as a civic movement with the co-operation of every organized element interested in municipal and social problems.

In sixteen other cities tentative plans are under way and from them will come, doubtless, many more vigorous campaigns for home owning and home building. In all these cities the club women, the clergy, financial interests, municipal officials and the labor organizations are being appealed to by the United States Department of Labor to do their utmost in assisting the campaigns to get under way. In the cities where campaigns now are on the women are proving invaluable as missionaries for the "Own-Your-Own-Home" gospel.

Since labor is so importantly involved in the home building projects, labor organizations are being invited and urged to take a conspicuous place in the campaign work in each community. Most of the homes built in this sort of a movement are for laborers and salary earners and the building of these homes provides employment for the building trades and common labor. There is, therefore, a double benefit in the home building and owning movement for labor, and, through its organization, in most localities, it is co-operating with enthusiasm.

## CONTRACTS LET IN MARCH SHOW IMPROVEMENT IN BUILDING INDUSTRY

Contracts let in March for building and construction projects will be in excess of the normal average for March in money value. The statement is made on the authority of the Division of Public Works and Construction Development of the United States Department of Labor which issued figures on the contracts let in territory east of the Missouri and north of the Ohio rivers, for the first three weeks of March, together with an estimate for the remainder of the month.

The total number of contracts let for the third week in March was 1,945, representing a money value of \$39,017,308. The New York district reported 186 projects, involving \$8,372,682; Pittsburgh, 163 projects, involving \$5,063,614; Boston, 443 projects, involving \$2,602,000. The Chicago district reported 741 contracts let, involving \$19,212,298.

The record for the first three weeks of March was:

|                       |              |
|-----------------------|--------------|
| Week ending March 7,  |              |
| 1919 .....            | \$27,751,076 |
| Week ending March 14, |              |
| 1919 .....            | 29,851,407   |
| Week ending March 21, |              |
| 1919 .....            | 39,017,308   |

Total ..... \$96,619,791

From these figures has been omitted the Minneapolis district, from which the total would be less than one million dollars.

"These figures not only show the increase from week to week," says the Department of Labor statement, "but the indication of the month's probable showing is very gratifying. It appears likely that the entire month's figures will be between \$125,000,000 and \$150,000,000. The amount involved in contracts awarded in January of this year was about \$51,000,000 and in February about \$95,000,000; from which it appears the construction business certainly is 'picking up.'"

Figures for the month of March for several years, to the nearest million dollars, are as follows:

|            |              |
|------------|--------------|
| 1911 ..... | \$69,000,000 |
| 1912 ..... | 73,000,000   |
| 1913 ..... | 64,000,000   |
| 1914 ..... | 59,000,000   |
| 1915 ..... | 76,000,000   |
| 1916 ..... | 95,000,000   |
| 1917 ..... | 133,000,000  |
| 1918 ..... | 116,000,000  |

"The present month does not have large Government contracts to increase

its amounts, as did the corresponding month a year ago. Nevertheless, it will be seen that the total is very likely to be about equal to March, 1917, and to exceed the amount for any other March during the period included in the table. It is to be remembered, however, that costs are higher and that the amount of construction of one of the earlier years would now, in common parlance, 'run into more money.' Index figures have been compiled as carefully as the nature of the case would permit, for the general cost of construction for the years from 1913 on, and the figures for these years have been converted into the cost in

1918, or the present time. The results, in round numbers, are:

|            |              |
|------------|--------------|
| 1913 ..... | \$94,000,000 |
| 1914 ..... | 89,000,000   |
| 1915 ..... | 118,000,000  |
| 1916 ..... | 132,000,000  |
| 1917 ..... | 153,000,000  |
| 1918 ..... | 116,000,000  |

Average of the six years, \$117,000,000

"From this it appears that, even with the proper allowance made for increasing costs, contracts have been awarded during the first three weeks of the present month for such an amount (nearly \$97,000,000) that the entire month will undoubtedly present a total considerably above the average of recent years."

The figures submitted further justify the statements recently issued by the Department of Labor that building and construction work, the country over, gradually are approaching normal.

## HIGH PRICES

BY IRVING FISHER

*Professor of Political Economy, Yale University*

AT the present time there is a marked halt in production. Industry is slowing down. Unemployment of labor increases. Some industrial concerns are failing to earn profits, and others are suffering the dissipation of their accrued profits, because, even by shutting their plants down, they can not save certain of their expenses or any of their fixed charges. The Government's revenues, dependent as they are upon the national income, may fall short at the very time we need them most. In brief, we are threatened with a widespread business depression, and from peculiar causes, for the unsound conditions usually preceding a widespread business depression are absent.

The main reason why business is not going ahead better is that most people expect prices to drop. The merchant is selling, but not buying. The manufacturer holds up the purchase of his raw materials. People quote the disparity between present prices and those prevailing "before the war," and decide they will not buy much until present prices get down to "normal." This general conviction that prices are sure to drop is putting a brake upon the entire machinery of production and distribution. Readjustment waits because we keep on waiting for it. We have waited in vain for over three months. It is interesting to observe that many manufacturers think that prices must come down, including the price of labor; but they are ready to demonstrate to you that their own prices can not come down, nor can they pay lower

wages. Almost everything they buy somehow costs twice as much as before the war, and their labor is twice as dear. They can not pay their labor less if labor is to meet the increased cost of living. Now, as a matter of fact, when we investigate almost any individual one of the so-called high prices for industrial products we are likely to find that individually it is not high; that is, it is not high relatively to the rest. Our quarrel is with the general level of prices.

Variations in the general price level may be compared to the tides of the sea, while individual prices may be compared to waves. Individual prices may vary from this general level of prices for specific reasons peculiar to individual industries, just as the height and depth of waves vary from the general level established by the tide. The causes controlling the general price level are as distinct from those controlling individual prices as the causes controlling the tides are distinct from those controlling individual waves.

All prices have risen, but some have risen more, some less, than the average for particular reasons affecting each industry. In some cases an improved organization of both employers and employees has enabled them to combine against the public and take full advantage of the price advance. The war brought about an abnormal demand for certain products like copper and steel, and they advanced faster than the average. The abnormal demand having disappeared, these prices are being adjusted

downward. Wheat is a case where demand increased and at the same time certain of the usual sources of supply—Russia, Australia, and Argentina—disappeared, with a resultant abnormal price increase. The closed sources of supply have opened again, and wheat prices in the world market have dropped. In some cases, as in many of the industries making building materials, the war meant a great slackening in demand, an enforced curtailment in use by Government order. In such instances we are likely to see an upward swing in prices as the suppressed demand again makes itself felt. Today we are witnessing throughout the country such price readjustments, up and down, but the general price level has shown little sign of falling, as is evidenced by price index numbers. It is apparent to every thoughtful observer that some great force has affected all prices, creating a new standard to which they are all conforming.

The fundamental practical question confronting business men is whether the general level of prices is going to fall. In my opinion, it is not going to fall much, if at all. We are on a *permanently* higher price level, and the sooner the business men of the country take this view and adjust themselves to it the sooner will they save themselves and the Nation from the misfortune which will come if we persist in our present false hope.

The general level of prices is dependent upon the volume and rapidity of turnover of the circulating medium in relation to the business to be transacted thereby. If the number of dollars circulated by cash and by check doubles while the number of goods and services exchanged thereby remains constant, prices will about double.

The great price changes in history have come about in just this manner. The "price revolution" of the sixteenth century came upon Europe as a result of the great influx of gold and silver from the mines of the New World. Europe was flooded with new money. More counters were used than before in effecting exchanges and prices became "high." People talked then of *temporary* "inflation," just as they talk of it now. But it was not temporary; it was a new price level.

A similar increase in prices all over the world occurred between 1896 and 1914, following the discovery of the rich gold fields of South Africa, Cripple Creek and Alaska, the invention of the cyanide process in mining, and the vast extension of the use of bank credit.

Circulating credit—that is, bank deposits subject to check and bank notes—is a multiple of the banking reserve behind these deposits and notes; and the essence of this reserve is gold. Our present monetary

system is an inverted pyramid, gold being the small base and bank notes and deposits being the large superstructure. The superstructure grows even faster than the base. The deposits are the important elements. They are transferred by check from one individual to another; that is, the circulation of checks is really the circulation of deposits.

Thus, any increase in the country's gold supply has a multiplied effect. The possible extent of that effect is dependent upon (1) the amount of gold available, and (2) the gold reserve requirements, determining the volume of credit that can be put into circulation based upon the gold. Over a billion dollars in gold has come into this country from abroad since 1914, and a large amount has disappeared from domestic circulation. The gold from both these sources has found its way into the United States Treasury and into bank reserves. On June 30, 1918, the portion of the gold reserve of the Federal reserve banking system which supported national bank deposits and Federal reserve notes was more than three times as large as the gold reserves under the old national banking system on June 30, 1914—\$1,786,000,000, compared to \$592,000,000. During the same period credit instruments (demand deposits and notes) increased about twofold—from \$6,100,000,000 to \$11,700,000,000. This increase of credit instruments is typical of the banking situation for the country as a whole and largely explains the present high level of prices. The increase of gold has been so great, however, that the base has grown faster than the superstructure—which is contrary to the normal tendency. The ratio of gold to credit has risen from 9.6 per cent. to 15.3 per cent. The legal reserve requirements of the present system are such that for 1918 there is an excess of gold above these requirements of more than \$700,000,000. The reserve required by law to support the \$11,700,000,000 of credit instruments of 1918 is \$1,070,000,000. The \$700,000,000 of free gold could support an additional superstructure 70 per cent. as large as the existing one, which indicates that for the banking of the country as a whole a potential future expansion of 50 per cent. is a conservative estimate.

Many people, referring to this inflation in the circulating medium, and assuming that it is temporary, are waiting for this inflation to subside. When we speak of *inflation* we mean more circulating medium than is needed to transact the business of the country on a given price level. But what price level? Some people mean the price level of 1913-14. Our currency is certainly inflated in terms of the prices of that period, just as the currency in 1914 was inflated with respect

to the prices of 1896, but our currency is not inflated at the present time relative to the new level of prices in the world which the war has brought. The country's volume of money will have to be judged in terms of this new price level, not in terms of a price level that is past. To speak of the present "inflation" as temporary is to assume the very thing about which we are contending—to assume that the normal prices are those of 1914.

Let us explain the factors upon which any future price movements must depend.

1. *Gold will not return to circulation*—No great effect in the direction of falling prices can be expected from any return of gold and other lawful money into daily circulation. Such a reversion would be contrary to monetary experience everywhere. When people have learned to leave their gold and silver in the banks and use paper money and checks instead they find the additional convenience so great that they will never fully return to the old practice.

2. *No great outflow of gold through international trade*—It should be noted that many of the former reasons for a flow of gold from America abroad have disappeared. We used to owe Europe a huge balance of interest payments upon American securities she held. The situation is reversed today. Moreover, Europe must pay us money for the materials we will send her for reconstruction, or at least pay us interest on credit we will extend her. Thus, our exports will probably exceed our imports during the reconstruction period. We used to pay ocean freight money to foreign carriers; today the American merchant marine will keep in American hands tens of millions of dollars of ocean freight money. The huge volume of American tourist travel abroad, for whose expense we had to settle, has stopped and can not resume for a year at least. For all these reasons the lines are laid for a movement of gold from Europe here rather than a movement of gold from America to Europe.

"Yes, but," people say, "wait until trade is resumed between the United States and Europe, then surely 'low-priced European goods' will flow over here in such enormous volume that they will liquidate all annual obligations to us in goods." Ultimately Europe must pay her obligations to us in goods, but it will take many years. Meanwhile, she needs our tools, machinery, and raw materials for immediate reconstruction.

At the present time European goods are not "low priced" (however little the money wages of European labor will buy). Prices in Europe since the war began have risen more than they have in the United States. The price rise has been less the farther from the seat of hos-

ilities. It was least in Australia and New Zealand. It was next least in the United States, Canada, and Japan. Then came neutral Europe; then our present allies; and finally, Germany and Russia. Gold tends usually to flow from high-priced countries to low-priced countries, so that until "inflated" European prices fall gold is not likely to flow thither. Prices are no more likely to fall here than there, and for the same reasons, which will be explained below.

3. *Reduction of outstanding credit*—The chief dependence of those who predict lower prices is on a reduction of the superstructure of credit resting upon our gold rather than on any reduction in the volume of this gold itself. They look for a contraction of bank credit, a reduction in the volume of deposits subject to check, which circulate throughout the country.

But the main cause for the present extension of bank credit is the Liberty Loan, and there is soon to be another. Subscribers for the new loan will not pay for their bonds in full any more than they did in the previous cases, but rather less. Many of them will deposit the bonds with the banks as security for loans to be repaid later. The effect on our circulating medium will be the same as if the Government were to impose a levy of \$6,000,000,000 of credits upon the Federal reserve banks, and then order them to apportion these credits out among the banks of the country. This process will certainly lead to an expansion of credits. The former issues of Liberty Bonds are still carried by the banks to a considerable extent. It may be contended that the bank credit expansion represented by the new victory notes has already occurred in the form of Treasury certificates, which are merely to be funded by the victory notes. The victory note issued thus represents only a shifting of the obligation to pay credits advanced to the Government, a shifting from the shoulders of the banks to the shoulders of the victory note buyers. The volume of outstanding bank credit remains the same. To a certain degree this contention is true. But a portion of the April victory note issue will go to pay future expenditures, not accrued expenditures. Then as soon as the Government needs additional money, it will issue new Treasury certificates, resulting in new extension of bank credit. Moreover, there is little doubt that there will be at least one more Government bond issue during the reconstruction period, and this will tend to further increase our present credit structure.

The banks must lend credit and create deposits to meet the expenditures not only of our own Government, but of foreign Governments as well. The same thing

results even if these Governments are served directly by private investors here instead of via the United States Treasury. These investors pay for foreign Government bonds as they do for our Liberty Bonds—on the installment plan—paying a small part down and borrowing the rest from the bank. This increased purchasing power will be mostly spent in this country for supplies to be sent abroad for rehabilitation. This continuance of vast loan issues, connected with war and reconstruction throughout the world is a factor which will maintain the high price level temporarily, which means many months.

It is also worth keeping in mind that Liberty Bonds and other Government securities held here do not wholly cease being a source of credit expansion when the individual subscribers have completed their payments on the bonds and really own them. These new bonds are unrivalled security for further borrowings from banks for commercial purposes, and they will continue to be so until the Government which issues them redeems them.

The availability of the vast issues of war bonds as bases for future credit expansion, coupled with the fact that our banking system has still many unused reefs, sure to be taken out later, when business wishes to spread more sail, is the chief reason why prices will keep up permanently; that is, for many years.

Between the period of temporary and the period of permanent effects, there may be a slight dip in the price level, say a year from now. If so, it is the more incumbent upon business to proceed now; for it can not wait a year.

During the war the flotation of stocks and bonds of commercial concerns has been very greatly diminished. During the period upon which we are now entering the issue of such securities will increase greatly.

Against any considerable reduction in bank credit and hence in the general level of prices, we shall find the whole business community in arms. Falling prices mean hard times for the individual and for the nation, and everyone resists the tendency. At the end of the Civil War the Treasury started to reduce the quantity of greenbacks. A start had hardly been made, however, before the business depression of 1866 and 1867 caused Congress to forbid by law any further reduction. Should the Federal reserve banks attempt, by raising their discount rate or otherwise, to reduce the volume of bank credit outstanding, they will meet with the same sort of opposition. Moreover, the hostile attitude of labor toward the lowering of wages will deter legislators and bankers from any organized policy of contraction.

Looking into the still more remote fu-

ture, there will be in Europe, particularly on the Continent, a vast increase in deposit banking. The need of the Governments there for funds during war times hastened the introduction of deposit banking. Money went out of circulation into bank vaults, and there became the basis for circulating credits. This means a new habit which will lead to a great currency expansion. Far-away countries like India and China, are also learning to use deposit banking. It is as if a new source of gold supply had been discovered. What has been discovered in a new way of using the gold supply. The world, during the course of the war, has thus started, or has hastened, an equivalent of the price revolution of the sixteenth century.

Business men should face the facts. To talk reverently of 1913-14 prices is to speak a dead language today. The buyers of the country, since the armistice, have made an unexampled attack upon prices through their waiting attitude, and yet price recessions have been insignificant. The reason is that we are on a new high-price level, which will be found a stubborn reality. Business men are going to find out that the clever man is not the man who waits, but the one who finds out the new price facts and acts accordingly.

Edmund B. Gilchrist, architect, has opened offices at 403 Westerly Building, 1627 Sansom street, Philadelphia.

Marmaduke Tilden, architect, has returned from overseas service and temporarily has opened offices in the Westerly Building, Philadelphia.

**Advertising is nothing more nor less than good salesmanship reduced to print. The business man who can put "sales talk" into type has learned the cardinal principle of good advertising.**

#### Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for April 1, 1919.

Editor, H. L. Sharpe.

Managing Editor, none.

Business Manager, none.

Publishers, Building News Publishing Co., Perry Building, Philadelphia.

Owners, Louis S. DeLone, 6419 Drexel road, Philadelphia; Samuel R. McDowell, Narberth, Pa.

Known bondholders, mortgages and other security holders holding one per cent. or more of total amount of bonds, mortgages or other securities, none.

(Signed)

Building News Publishing Co.,

Louis S. DeLone, President.

Sworn and subscribed before me this 24th day of March, 1919.

Edward J. Toole, Notary Public.

(My commission expires Jan. 21, 1921.)

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Lodge Building (Mosque)**, Twenty-third and Parkway, Philadelphia, \$1,500,000. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Lu Lu Temple, Ancient Arabic Order, Nobles of the Mystic Shrine, care of J. S. Bair, Nineteenth and Arch sts. Stone, marble, brick, concrete and steel, 12 stories. Plans in progress.

**Twin Residences (3 pairs)**, Fox Chase, Philadelphia. Architect, Andrew C. Borzner, 717 Walnut street, Philadelphia. Owners, Fox Chase Land Improvement Co., care of architect. Brick and half timber, 2 stories, 16x37 feet, flexatile roof, hot water heating, electric lighting, yellow pine floors, gas ranges. Will be ready for sub-bids in one week.

**Residences (alts. and add.)**, south side of Chestnut street, between Forty-fourth and Forty-fifth streets. Architect, E. Allen Wilson, 1208 Chestnut street. Owner, R. J. Selzer, 400 Chestnut street, Philadelphia. Newporches enclosed, slate roof, glazing, yellow pine floors, interior alterations. Owner is taking sub-bids.

**Dwellings (alts. and add.) (50)**, Fifty-fourth and Delancey streets. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, W. E. Blair, 207 South Sixtieth street, Philadelphia. New porches, shingle roof, hot water heating, electric lighting, yellow pine floors. Owner will take sub-bids in a week.

**Residences (8)**, Tenth and Luzerne streets, Philadelphia. Architect, Frank V. Nickels, 4400 Manayunk avenue. Owner, Edw. B. Friel, 834 Windsor Square, Philadelphia. Brick, 2 stories, 16x54 feet, slag roof, stone foundations, hot water heating, combination lighting, tile work, hardwood floors. Owner will take sub-bids in one week.

**Store and Dwelling (alts. and add.) and Garage in rear**, 2144 North Front street. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owners, Modern Music Co., 2144 North Front street. Brick, 2 stories, rear addition, 16x26 feet, slag roof. Garage, 1 story, 20x24 feet, slag roof, copper bulk, hot water heating, electric lighting, tile and marble work, plumbing, hardwood floors, plate and leaded glass. Owners are taking bids.

**Factory**, 1006 Vine street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Samuel Stern, 152 N. Eleventh street, Philadelphia. Brick, 2 stories, 24 feet 9 inchesx104 feet, slag roof, stone foundations, electric lighting, concrete, plank and maple floors, mill work, hollow metal skylights, metal ceilings, 1 lift. Architect taking bids, due as soon as possible. Lam Building Co., 1001 Wood street; G. J. Reich, 1112 Loudent street; John Roman, care of architect, are figuring.

**Restaurant (int. alts.)**, 1016 Chestnut street, Philadelphia. Architects, Bailey & Bassett, 421 Chestnut street, Philadelphia. Owners, Mandarin Cafe, care of architect. Mill work, plastering, painting, steam heating, electric

work, tile, marble and terrazzo work, metal lath. Architects have received bids.

**Theatre**, West Philadelphia, \$50,000. Architect, J. Ethan Fieldstein, Penfield Building. Owner's name withheld. Brick and hollow tile, 1 story, 80x170 feet. Plans in progress.

**Twin Residences (5 pairs)**, North Philadelphia. Architect, private plans. Owners, Rush Bros., 1100 Fillmore street, Philadelphia. Brick, (4) 2½ stories, (6) 2 stories, 16x43 feet, tile, shingle and tin roof, oak and yellow pine floors, stucco, stone foundation, electric lighting. Owners taking sub-bids.

**Residence (alts. and add.)**, Hortter and Johnson streets, Germantown. Architect, H. Childs Hodgson, 1312 Walnut street, Philadelphia. Owner, Albert M. Greenfield, Thirteenth and Chestnut streets. Interior alterations (plumbing, heating and oak floors reserved), tin roof, tile and marble work, plastering, painting, mill work. Architect has received bids.

**Residence**, St. Martins, Philadelphia. Architect, C. A. Ziegler, Stephen Girard Building, Philadelphia. Owner's name withheld. Stone, 2½ stories, 30x45 feet, 10x15 feet, shingle roof, oak floors, hot water heating, electric lighting, tile work. Architect taking bids, due April 14th. F. B. Davis, 240 North Sixteenth street; W. John Stevens, Inc., Wyncote, Pa.; Harry Murphy, Willow Grove, Pa., are figuring.

**Building**, 126-132 Race street, Philadelphia. Architect, J. M. Blew, 833 South Cecil street, Philadelphia. Owner, Harry J. Hogg, 429 Race street, Philadelphia. Stone, brick and steel, 1 story, 75x76 feet, slag roof, cement and pine floors, steam heating, electric lighting, metal lath, hollow metal skylights, ornamental iron work. Architect taking bids, due April 12th. H. E. Baton, 1713 Sansom street; A. R. Raff Cont. Co., 1635 Thompson street; Conneen Const. Co., 1737 Filbert street; John M. Yardley, 1716 Sansom street are figuring.

**Church (alts.)**, Pratt street, Bridesburg, Philadelphia. Architect, Samuel D. Milner, 1117 Foulkrod street, Philadelphia. Owner, Bridesburg Presbyterian Church, Bridesburg, Philadelphia. General interior alterations, mill work, painting, electric lighting. Architect is taking sub-bids.

**Residence (alts.)**, 1531 Spruce street, Philadelphia. Architect, Frederick Webber, Morris Building, Philadelphia. Owner, name withheld. Interior and exterior alterations, painting, plastering, steam heating, electric lighting, tile and marble work, oak floors, metal lath. Architect has received bids.

**Building (alts.)**, 935 North Ninth street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Keystone Supply & Mfg. Co., on premises. Brick work, cement work, steel work, plastering, mill work, painting, glazing, metal lath, electric lighting, metal ceilings. Architect has received bids.

**Machine Shop (add.)**, southeast corner Front and Kenilworth streets, \$12,000. Architect, private plans. Owner, General Engineering Works, 719 South Front street. Brick, 1 story, 57x148 feet, slag roof. Owner will build.

**Residence (alts.) and Garage**, Southwest Corner Fifty-ninth and Chestnut streets. Architects, Durham Brothers, 26 South Fifteenth street, Philadelphia. Owner, Harry Pearl, 155 South Sixtieth street, Philadelphia. New store front in basement, flush bulk, plate glass, back porch, new garage, brick, 2 stories, 16x20 feet, slag roof, cement floor, stone foundation. Owner will be ready for sub-bids in one week.

**Garage**, location withheld. Architects, Durham Brothers, 26 South Fifteenth street, Philadelphia. Owner, Albert Granich, 914 Arch street, Philadelphia. Brick, 1 story, 18x35 feet, slag roof, stone foundations, concrete floor, heating and lighting extension. Plans in progress. Owner will take bids in two weeks.

**Warehouse**, 943-51 North Second street, Philadelphia. Architect, F. E. Hahn, 1112 Chestnut street, Philadelphia. Owner, United Wholesale Grocery Co., on premises. Reinforced concrete, steel and brick, 3 stories, 80x200 feet, slag roof, steam heat, electric light, yellow pine floors, metal lath, (1) elevator, rolled steel sash and skylights, roof ventilators. Architect will be ready for bids in a week.

**Garage**, south side of Market street, east of Forty-ninth street, Philadelphia. Architect, Le Roy B. Rothschild, 1225 Sansom street, Philadelphia. Owner, care of Carl Wolf Miller, agent, Morris Building, Philadelphia. Brick, 1 story, 50x215 feet, stone foundations, steam heating, slag roof, electric lighting, plumbing, cement floor, mill work, hollow metal skylights, gasoline storage system. Plans in progress. Architect will be ready for bids in two weeks.

**Factory**, Northeast Philadelphia. Architect, Fred T. Uezzell, 717 Walnut street, Philadelphia. Owner, name withheld. Reinforced concrete, 3 stories and basement, 140x240 feet, reinforced concrete, slag roof, reinforced concrete floors, steam heat, electric lighting, rolled steel sash, hollow metal skylights, fire doors, fire tower, (2) electric elevators. Preliminary plans in progress. Architect will take bids in three weeks.

**Building (alt. and add.)**, 38 North Eleventh street, Philadelphia. Architects, Magaziner & Eberhard, 603 Chestnut street, Philadelphia. Owner, Waistmakers' Union, on premises. Miscellaneous repairs. Architects taking bids. W. O. Springer, 1624 Latimer street, and J. M. Yardley, 1716 Sansom street, figuring.

**Residence (alts.)**, 1511 North Sixteenth street, Philadelphia. Architects, Magaziner & Eberhard, 603 Chestnut street, Philadelphia. Owner, Emil Selig, on premises. Miscellan-

## A Permanent Service Organization

The business house that owns an Autocar Motor Truck has at its disposal all of the facilities of the Autocar service organization.

There is a factory branch owned and operated by The Autocar Company in the principal cities of the country, and from these branches spread out sub-branches and dealers.

Each Autocar service plant always maintains a complete stock of spare parts and a competent service force.

Such a complete and permanent service policy is possible because the Autocar is manufactured entirely by The Autocar Company—the responsibility for the continuous and efficient operation of an Autocar is undivided.

### Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

The illustration shows the installation of the famous "Star" Ventilator on the War Trade Board Building, Washington, D. C.

## "STAR" VENTILATOR (Patented)

The "Star" Ventilator was adopted by the U. S. Government as its War Standard for cantonments and other important buildings, on account of its HIGH EFFICIENCY and SIMPLICITY.

The Thousands of "Star" Ventilators in use on public buildings, schoolhouses, mills, warehouses, and similar structures throughout the country, proves their superiority over other types.

We also manufacture Evans "ALMETL" Fire Doors and Shutters, Metal Tiles and Shingles, approved by the U. S. Gov., and High Grade Roofing Tin.

### An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

### ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

## Bricklayers, Masons, Plasterers

DO YOU

use the hod carrying  
method of elevating  
brick, mortar, cement,  
etc.? It's too old fash-  
ioned—too slow and cost-

ly—for present day building work.

"LITTLE GENERAL" MATERIAL ELEVA-  
TOR HOISTS are used by dozens of bricklayers in  
Philadelphia, who used to rely on the hod carrier  
method, which was expensive and unsatisfactory.  
Now they use a "LITTLE GENERAL" and save  
money.

Several bricklayers have told us they saved the  
price of the "LITTLE GENERAL" on the first job.

"LITTLE GENERALS" in Philadelphia stock  
ready for immediate delivery.

One man to load the elevator, one man to dis-  
tribute the barrows and one man at the hoist will  
keep fifteen bricklayers hustling.

Elevator operates in  
an opening 26" x 60".  
Easy to erect, easy to  
take down and move,  
convenient to store.

Phone for prices and  
special discount.

## As The Editor Sees It

THERE is no doubt that construction work is a most necessary factor in adjusting the present situation throughout the country. Building of all kinds is imperative to make up the enormous deficiency created by the entire cessation of construction work during the war. Building is also needed and is, indeed, the only available means of absorbing the great mass of labor released from all sorts of war service and war industries. Naturally when construction work ceased during the war, the labor usually employed by the building trades had to turn to the great war enterprises; now that these are in great part at an end, this same labor must be absorbed by Peace industries. Building is making strides; but the progress is too slow. We need building—more building than we have ever known at any period in our history—to set in motion again the wheels of the industrial machinery of the nation, and establish the healthy economic conditions and prosperity which are within our grasp.

Cheers won't satisfy a discharged soldier with an empty stomach and possibly a family to support. Satan, in the form of dissatisfaction and Bolshevism, will find plenty of mischief for the unemployed labor.

The problem must be met, and dealt with quickly.

In the opinion of Simon O'Donnell, President of the Chicago Building Trades Council, writing for the *American Con-*

*tractor*, there are two things which must be done to stimulate building. "One," says Mr. O'Donnell, "is a substantial reduction in the cost of building material and the other the realization that this reduction will be the last one to be made for some time to come—several years. That means that the building material men must reduce their prices to the lowest point at which they can sell at a reasonable profit, and must not expect to make the same high profit rates that they did during the war period, when everything was too high. They must reduce their prices to the point where they know they won't reduce them lower for a long time, and they must then make this fact clear, so that people won't put off building they intend to do until another year or two rolls around, on the theory that they can save money on their buildings by waiting.

"So far as labor is concerned, this stable price is here. Wages can't be reduced materially under present conditions. It is unfair to ask it. But as wages are, after all, only a relatively small part of the cost of building, other things can be reduced considerably, and they must. I repeat, I am not asking the material man to reduce prices below what would give them a fair profit. The attitude of labor is that manufacturers may get that fair profit, but there must be no profiteering.

"Of course, no matter what happens in the building material market, there will be some building. There are certain

types of construction that builders know must be started immediately, no matter what the state of the labor and material market. Hotels are an example, for when they are needed, as they are in Chicago, they will yield big returns which will more than offset high building cost. And certain types of factories are needed immediately for the necessary expansion of industry. Theatres and buildings of such types are also in this class.

"Another thing that would help greatly would be for capitalists, big manufacturers and others of like situation, to use the present as a time for making necessary improvements in their plants. I know of many of these men and some of them are sincerely desirous of doing something to aid the present industrial situation. I know of many plants in Chicago, and there must be many of them elsewhere, where there are really necessary improvements which should be made, new buildings erected, and so on. If the owners of these plants would start right in now to build, it would inspire a lot of confidence. It is human nature that the average man, observing the big man start in building, would say to himself, 'Well, he is shrewd and successful, and if he thinks this is a good time to build, why then it must be a good time for me to build, too.' All the 'big men' have to do this to show their confidence in the country, and other men would follow the lead, for we all have a lot of confidence in the country. We all need a leader."

THE stabilization of prices which Mr. O'Donnell recommends would be of material assistance in dispelling much of the existing uncertainty. This view is set forth and urged in a letter from the Lakewood Engineering Co. of Cleveland, Ohio, which believes—

"If the manufacturers of cement, of steel, producers of lumber and other building materials, manufacturers of clothing, food products and machinery,

would follow a PUBLISHED-PRICE-FOR-THE-SEASON method and the prices of these commodities were established in the minds of the public, there would not now be the marked halting in business.

"It urges also the adoption of a plan of action over the slogan, prices effective for specified periods or seasons will establish confidence between buyers and sellers.

As to changing conditions under which we are working:

First: For a number of years there has been a gradual increase in and instability of prices for material, and also an increasing scarcity of, and a consequent instability in cost of labor, which have rendered the letting of contracts under the old system of lump sum uncertain and unsatisfactory to contractors, so that they are advocating, in order to eliminate risk of loss to themselves, the adoption of the system known as cost, plus a percentage or fixed fee, in the handling of construction work. The conditions brought about by the war and the fact that the Government placed its stamp of approval on the cost plus fee method in the greater part of its war work, will serve to bring this method of doing construction work into more general use, and contractors will thus approach, in methods of charges at least, the "professional method" of a fee or percentage on cost.

The system has its faults, which are known to all of us, and is capable of abuse. It depends, more than the lump system, upon the integrity of the contractor and a conscientious regard for the interests of an owner, whose interests are likely to be lost sight of in a majority of cases. The attitude of labor toward percentage work is well known. Whatever common interest there may have been between contractor and employees to save contractor from loss under lump sum contracts is absent under the cost plus fee system, and the indifference of labor to an owner's interest, with resulting decrease in efficiency, is well known. Labor is insistent in its demands and the uncertainty of the character of its demands constitutes one of the principal reasons for abandoning the old system. The fact that labor will continue to be an uncertain element of cost in any building project must be taken into account and will have its effect on methods of contracting and our own practice as well. The system will impose upon architects the checking and auditing of bills, unknown under the lump system, and will greatly increase their work without corresponding recompense.

Second: The work of the war has demonstrated the value of co-ordinated and organized effort, in spite of the drawbacks bound to occur because of the circumstances under which the organization was effected. It remains to be seen how far the Government, now that the war is over, will retain control of or will attempt to direct construction or building in those lines which have a direct influence on the welfare of the public. Whether the Government will assume any part of this direction or not, the fact remains that the war has given a great impetus to a movement begun before the

## THE ARCHITECT AND THE COST-PLUS FEE

Report of a special committee appointed by the Joint Committee on Reconstruction of the Illinois Chapter, A. I. A., and the Illinois Society of Architects.

By JOSEPH C. LLEWELLYN, A. I. A.

AS Chairman of the Committee to consider steps to be taken to permit architects to do work on a cost plus fee basis and still retain professional standing, I submit the following:

As stated in the minutes, the resolution appointing the Committee might be interpreted as referring to a scheme of charges, discussed and practically endorsed by the American Institute of Architects in convention a few years ago, when the architect in lieu of a straight percentage on the cost of the work was permitted to charge a fixed sum for his service and add thereto the actual cost of drafting, supervision, expert service and an allowance for office overhead.

The purpose of the motion, however, as I understand it, contemplates a discussion of the question as to whether or not forces are at work which will make it advisable for the architect to assume a larger supervision of the construction of work under his care than formerly, extending even to the purchase of materials and employment of labor, and charging for this service a fixed amount plus the cost of preparation of drawings, supervision, etc., or a percentage on the cost of the work as charges are now made for preparation of drawings and that supervision now recognized as a proper part of the architect's services, and considered professional.

Much depends upon the definition of a profession and the limitations put upon it. In general, the term profession implies an occupation requiring a liberal and special education and discipline, and the practice of the profession implies a personal service, employing the knowledge gained by such education and discipline and the experience resulting from practice. This service is rewarded by a fee, supposedly commensurate with the service rendered. Law and medicine are the well-known examples of the professions.

Architecture is no exception to such definition, but in practice the service rendered by the architect often becomes less a personal service than a use of special knowledge in directing and guiding the labor of a number of others in performing certain service. I doubt if anyone will claim that the service so rendered is any the less professional, but rather the claim may be made that the architect is filling a larger place in the second instance than when confining himself to his own personal efforts. Furthermore, it is a matter for debate whether the architect who renders the service to his clients he is supposed to render will be regarded as a professional man at all by the public, because he must combine with whatever sense of proportion, good taste and beauty he may have acquired by reason of environment or by education or travel, those qualities which in the eyes of those about him place him in the realm of pure business.

In fact, the methods we employ and include in the term professional practice, with its governing codes, etc., is being approached steadily by those we have been pleased to call contractors and who have had to do only with the actual business of building. In fact, we hear now of "ethics" among builders, as witness the scheme of organization proposed at the convention of general contractors held in Chicago recently. Is it not possible that the chief value of our term "professional" is to furnish a topic for debate or speculation, and has but little to do with the service architects render to their clients? The real question is, whether our methods permit us to keep abreast with the rest of the world, and if not, whether we cannot change them and retain the spirit of what a code of ethics aims at—honorable service to our clients and fair play to all others.

war, having for its object the proper housing of people in rapidly growing cities and towns, especially in workmen's communities, and that this work is apt to be done under co-operative or organization methods more than heretofore. To handle this work will call for a fuller co-operation of the architect, town planner, utilities engineer and builder, in which co-operation the directing hand should be that of the architect. This particular class of work will bring us closer to a much larger proportion of our people than our work heretofore has done, and it is worth while to prepare ourselves to assume a larger responsibility in operations of this character.

Third: The architect cannot be wholly immune from the effect of changes in business methods in other lines of work akin to his own, which have to do with construction; neither can he ignore the value of public recognition and approval of his services. The fact that construction companies and engineering corporations are employing designers and doing all work from the making of plans and specifications to the construction and furnishing of the building, and that this method is increasing, along special lines, is another element which has the effect of rendering the term architect less known and understood. The prominent part taken by engineering corporations in all Government war work is well known. The reason is evident. The public, even the Government, does not associate the architect with the actual operations of building in the same way they do engineering and construction companies; the element of design is to it an intangible thing and secondary to the building operation, and is considered a part of such operation, if considered at all. The special fields in which these companies operate are those offering the great opportunities to the architect.

These three items, namely:

"Instability of prices for material and labor and the consequent rapid change in methods of contractors themselves by which the contractors are approaching the principle of selling their service, instead of taking a chance on profits in the old way, and in which the architect must add greatly to his labor or lose a larger share of control in his work and of the confidence of his client;

"The impetus given to co-operation and organization methods by war activities;

"And the assumption by the contracting and engineering organizations of complete control of building from planning to completion and furnishing, are only three items, but sufficient to justify a discussion of our present methods and the advisability of changes in those methods."

It is the opinion of the Chairman of the Committee that architects as a class are not assuming the responsibility they should, that there is a wide difference between the appraisal of the service of the architects by themselves and by the general public, and that it is necessary to put a value into their service that will be recognized by a far larger proportion of the general public than obtains at present.

To do this, I believe it is necessary for the architect to prepare for and assume a wider responsibility in the actual construction of his building, and a broader initiative in every line of endeavor which has to do with the proper planning and construction of all classes of building, together with the utilities which go to make these buildings complete in service to the community in which they are located. To do this will call for a more complete co-operation of the architects, with specialists in all lines of engineering, covering utilities and equipment (and on occasion, town planning), required properly to lay out and equip the work. Also, through a Department of Cost and Construction, the architect should be prepared to give much closer approximations to cost of buildings than heretofore, and finally he should be prepared to take over the actual erection of the building in those cases where on account of location, size of work or other reason he feels his client's interests are not fully safeguarded by letting of contracts in the usual way, the owners paying bills for material and labor upon properly audited bills, instead of by certificate to contractor, as at present.

The objection will be raised that this is contracting and unprofessional. I answer that the subdividing of contracts and building without the general contractor is sanctioned, and I may say favored, by architectural societies today, and has been the practice of many architects for years, and is not deemed unprofessional. I confess my inability to see why the purchase of materials and employment of labor by the architect for the few trades furnished by the general contractor, and doing this work for an owner on a fee basis and not for a lump sum with an unknown profit, should be unprofessional. The service rendered is one in which the architect adds to his ability to design and sense of fitness and good taste, a knowledge of building construction and construction operations, which enables him to assume a greater control and responsibility in the execution of his work and for which he receives a predetermined compensation, not a profit representing the difference between cost and contract price. Work done in this manner is not contracting, but is rendering service for a fixed fee or percentage, and is done in a profes-

sional way. At the same time it gives the architect an authority and control of his own work, which he rarely has at present, and will give him recognition by the public, which goes usually to the construction organization.

Now, I am not unmindful of the general contractor in all of this discussion, and believe that we should co-operate with him as far as we can, being always fully alive to our clients' interests. There are many cases, however, where circumstances will dictate the elimination of the general contractor and where, to obtain the best results, unusual methods should be adopted. In these cases I believe the general contractor will recognize the reasoning as sound and will agree with me.

If architects believe that conditions call for change in methods and an assumption of a wider responsibility, then the means taken to accomplish that purpose will be modified by the viewpoint of the individual, and it becomes the individual's problem. No hard and fast method of procedure can be adopted that will apply to all, but each must work out the matter in accord with his own ideas. Architectural societies today control members through rules of practice, based on conditions of years ago. They attempt to cover by rule all questions pertaining to practice, but fail for the same reason that the economist fails when he reaches conclusions based on arguments which have not taken into account that element in human nature which seeks change and is not content with things as they are. These rules should be modified and placed on a broader basis, relying more on the individual's sense of honor and fair play.

The State law licensing architects, the revisions of which, in connection with the law licensing structural engineers, is receiving some attention, should be studied with a view to combination. The details of a law which would govern both architects and engineers is a matter for a legislative committee to consider. Under the engineers' law partnerships with architects are permitted. Corporations cannot be licensed, but under the engineers' law corporations are permitted to prepare drawings and specifications for buildings and structures which are erected, built or their construction supervised by such corporation, provided that the chief executive officer or managing agent of such corporation in Illinois shall be a structural engineer. Architects are barred from incorporations or forming partnerships, except with licensed architects, as far as any provisions to the contrary are found in the Architects' License Law. The legal phases of the question deserve special study. As architects we are barred from doing in a corporate way what we can do as individuals through

co-operative methods, as I have tried to suggest. Can we enlarge our sphere of action and be professional? I think we can, as there is not an element of contract in the matter as proposed, except for service rendered in planning and supervising construction of buildings. If the owner desires a guaranteed cost, then the architect must resort to the contractor in the old way, but the architect should employ scientific methods in preparing preliminary costs and make his estimates trustworthy. My own opinion is that the method outlined is but a modification of methods already employed by architects against whom no charge of non-professionalism has been made. I further believe many cases will be found in practice where better results can be obtained for owner and architect by an adoption of the scheme outlined in lieu of the old.

The details must of necessity be left to the individual architect, but the objective for all can be a larger initiative and control, more co-operation with others working along lines akin to our own and a more complete service to client and community.

#### FEDERAL GOVERNMENT WILL SPEND \$305,369,464 ON PUBLIC IMPROVEMENTS AND BUILDINGS

**D**ESPITE the failure of the last Congress to pass important appropriation measures, the Federal Government is getting under way a vast amount of building and construction work. The Department of Labor calls attention to the fact that by the end of the fiscal year 1921 there will be available for Federal aid for State road building more than \$266,000,000. Congress passed the appropriation for \$9,050,000 for new hospitals and improvements to old ones needed by the Public Health Service, and this building activity is being rushed and will be under way by the end of the year. Some of these projects will be under construction by midsummer. More than \$30,000,000 are involved in the maintenance and construction work set out in the Rivers and Harbors Appropriation Bill passed by the last Congress.

The harbors and rivers improvement work takes in almost every section of the country, much of it being planned for the Southeast, the Atlantic Coast and the Pacific States. More than a million dollars will be spent along the Mississippi River, approximately \$3,500,000 on the Ohio River, and about \$500,000 along the Missouri River. This work, it is understood, will go ahead regardless of current material and labor costs and should prove an important factor in making

business good in the hundreds of localities where such work is undertaken by the Government.

The building program of the Public Health Service, to meet the requirements of soldiers and sailors availing of their privileges under the War Risk service, calls for remodeling and additions to hospital properties at Camp Cody, N. Mex.; Camp Hancock, Ga.; Camp Joseph E. Johnston, Fla.; Camp Beauregard, La.; Camp Logan, Tex.; Camp Fremont, Calif., and the nitrate plant at Perryville, Md. For these necessary changes and additions \$750,000 are available. The hospital project in Cook County, Illinois, most of which is completed, carries an appropriation of \$3,000,000.

There is an appropriation of \$1,500,000 for the building of a sanatorium at Dawson Springs, Ky., the survey is being made, and for the site and hospital plant at Norfolk, Virginia, \$900,000 has been appropriated. An appropriation of \$550,000 was made to take care of the hospital project in the District of Columbia and \$190,000 were voted for improvements in the Marine Hospital at Stapleton, Staten Island, N. Y.

For most of these projects plans now are being prepared, and it is safe to say work on all of them will begin within the year.

The failure of the last Congress to appropriate money to take care of the building program in the Treasury Department has held up about 150 projects, for the most part post office buildings. Almost every State in the Union is represented in this list of deferred projects which involves the expenditure, on present construction prices, of more than \$23,000,000.

Many of these projects were contemplated before the war and money appropriated to cover the construction costs on the then prevailing prices. Estimates at that time showed these buildings would cost approximately sixteen and a half millions. The present estimates are about six millions more, and before the work can be undertaken Congress must appropriate enough money to take care of this increase in building costs. There is little doubt but that the next Congress will take care of this.

The spending of \$266,000,000 appropriated for Federal aid for road building depends upon the several States. Some are hastening to avail of this opportunity to enjoy Federal assistance in building State roads; other States appear to be slow to take advantage of the opportunity. However, the money is, or will be available, and the Federal Government is anxious that States make the most of their opportunities during the current years, as road building will do much to stimulate business and to provide buffer

employment of labor until the industrial transition from war to peace has been effected.

Plans for dwellings, prepared by the United States Housing Corporation for various Government projects during wartime, are to be made available for general public use by the Own-Your-Own-Section, Information and Education Service, United States Department of Labor.

Several types of houses have been selected as most artistic, as well as most practicable, and the plans for these will be given to Own-Your-Own-Home Committees, which are now carrying on campaigns in forty cities, so that estimates may be made on them. It is explained that the purpose is not to interfere in any way with the work of local architects, by thus providing Government plans, but it is expected that when the estimates in widely separated States are compiled the information will be of value to prospective home owners, while it will afford comparisons of the varying cost of construction in many parts of the United States.

Since the Own-Your-Own Home campaign was started a few weeks ago, the United States Department of Labor has received assurances of co-operation from Chambers of Commerce, civic associations, women's clubs, and organizations of many sorts. Requests that local campaigns be begun without delay have been sent this week to 400 cities. Letters have been addressed to Mayors, labor organizations and the clergy, as well as to the clubs and other associations that have expressed willingness to aid the campaign, undertaken to provide employment for returning soldiers and to hasten the revival of business.

While the campaign was started primarily to furnish buffer employment to the men of the demobilizing army, the number of letters received by the Department from soldiers who ask advice about how to proceed in obtaining homes of their own proves that the campaign has for the boys in khaki more than a temporary interest and contradicts the idea that military service breeds a distaste for settling down in a permanent abiding place. The Own-Your-Own-Home campaign, so far, has seemed to show that war instead of inspiring wanderlust has made the Americans who served in it more anxious than ever before to live in houses that actually belong to them.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Traffic Stable (alts.)**, Broad street below Federal street, \$6,000. Architect, Joseph A. Roletter, City Hall, Philadelphia (1222-1224). Owner, City of Philadelphia, Department of Public Safety, Philadelphia. General alterations, slag roof, plastering, mill work, painting, plumbing, electric lighting. Owners taking bids due April 23rd at noon. Mitchell Bros., 2125 Race street, and Edward Fay & Son, 2 South Mole street, are figuring.

**Stores and Dwellings (3)**, northeast corner Fourth and Kater streets, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Garrity Brothers, 750 South Juniper street, Philadelphia. Brick, 3 stories, slag roof, hardwood and cement floors, stone foundations, electric lighting, tile and marble work, hollow metal skylights, metal ceilings, iron work. Owners will be ready for sub-bids in one week.

**Store Building (alts.)**, 1306 Chestnut street, Philadelphia. Architect, David B. Bassett, 420 Perry Building, Philadelphia. Owner, George Miller, care of F. A. North Co., on premises. Architect taking bids. Pomeroy Const. Co., 1609 Ranstead street; Lam Building Co., 1001 Wood street, and F. L. Hoover & Sons, 1023 Cherry street, are figuring.

**Residence**, Upsal street and Wissahickon avenue, Germantown. Architect, Laurence Visscher Boyd, Harrison Building, Philadelphia. Owner, John A. Seeds, Upsal street, west of Wissahickon avenue. Stone, 2½ stories, 30x60 feet, slate roof, electric lighting, heating undecided, tile work, oak floors. Architect taking bids due April 17th. Wm. J. Gruhler Co., 219 East High street; Charles Johnson, 5701 Boyer street; William C. Wright, 22 Harvey street, and E. F. Bahls, 1702 North Thirteenth street, are figuring.

**Tallow House**, East Ontario street and Delaware River. Architects, private plans. Owners, The Berg Co., on premises. Frame, 1 story, galvanized iron lining, slag roof, and repairing 3-story building damaged by fire. Owners will be ready for bids in about two weeks.

**Residence and (7) Garages**, Knox street and Queen Lane. Architect, Charles W. Gilmore, Godfrey and G streets, Olney, Philadelphia. Owner, name withheld. Brick and rough cast, residence, 3 stories, 16x52 feet, garage, 2 stories, 22x60 feet, entire garage size, slate roof, cement and wood floors, hot air heating, combination lighting, tile work. Architect will be ready for bids in one week.

**Dyehouse**, 1628-30 Melon street, Philadelphia. Architect, Charles W. Gilmore, northeast corner Godfrey and G streets, Philadelphia. Owner, A. F. Bornot, Seventeenth and Fairmount avenue. Reinforced concrete, 1 story, 50x126 feet, slag roof, cement floor, rolled steel sash, roof ventilators, bridge over Melon street, 36 feet long. Plans about completed. Architect will take bids in one week.

**Factory (alts.)**, 716 Market street, Phila-

delphia, \$5,000. Architect, private plans. Owner, Estate of John Dobson, 809 Chestnut street, Philadelphia. General interior alterations. Owner will build.

**Store and Apartments**, Cheltenham avenue, Germantown. Architect, Benjamin R. Stevens, 1737 Filbert street, Philadelphia. Owner, H. B. Kohn, 22 West Cheltenham avenue, Germantown. Brick, terra cotta front, granite base, 3 stories, (2) apartments, tin roof, maple, oak and composition floors electric light, tile work. Builders R. M. Peterson & Son, 5108 Germantown avenue, are taking sub-bids.

**Residences (20)**, Seventeenth and Pulaski avenue, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, name withheld. Brick, 2 stories, 16x50 feet, slag roof, hot water heating, hardwood floors, electric lighting, tile work. Plans in progress.

**Business Property**, 241-243 South street, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, S. Frachter, on premises. Brick wall, new front, 3 stories, flush bulks. Plans in progress.

**Building (alts. and add.)**, 1226 Belmont avenue, Philadelphia. Architect, private plans. Owner, Wilson Magazine Co., Philadelphia. Brick, 2 stories and basement, 30x20 feet, slag roof, cement and wood floors, stone foundation, hollow metal skylights, iron work. John M. Yardley, 1716 Sansom street, taking sub-bids.

**Convent (alt. and add.)**, 334 Haines street, Germantown. Architect, H. G. Hammer, 808 North Seventeenth street. Owner, Our Lady of the Rosary Italian Roman Catholic Church, on premises. Brick, 3 stories, 26x28 feet, add., slag roof, yellow pine floors, electric light, plumbing, changing partitions. Owners have taken bids.

**Business Property (add.)**, 939 Passyunk avenue, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, H. Tevron, on premises. General interior alterations mill work, pine floors, metal ceilings, flush bulks, tile work, electric lighting. Architect ready for bids in one week.

**Store Building (add.)**, 617 South Fourth street, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, Louis Richter, on premises. Brick, 3 stories and basement, 16x27 feet, slag roof, cement and North Carolina pine floors, hot water heating, electric lighting, metal ceilings. Architect ready for bids.

**Business Property (add. and alt.)**, 1640 South street, Philadelphia. Architect, Reuben Beard, 1311 Commonwealth Building, Philadelphia. Owner, George Switt, on premises. Brick, 3 stories, 22x36 feet, slag roof, hot water heating, electric lighting, cement and North Carolina pine floors, metal ceil-

ings, wrought iron guards. Architect ready for bids.

**Residences (8)**, Sixty-third and Larchwood avenue, Philadelphia, \$12,000 each. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Independent Realty Co., 824 Snyder avenue, Philadelphia. Tapestry brick and stucco, 2 stories, 16x70 feet, garages in basements, concrete foundations, Spanish tile and slate roof, oak floors, hot water heat, electric light, tile and marble work, grate tile, Indiana limestone trim. Owners are taking sub-bids.

**Factory**, northeast corner Fifth and Clearfield streets. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, H. Masover, care of architect. Brick, slow burning construction, 2 stories, 36x60 feet, slag roof, pine floors, steam heat, electric lighting, rolled steel sash, hollow metal skylights, electric elevator. Plans completed. Architect ready for bids.

**Dwellings (14)**, Sixteenth and Rockland streets, \$64,500. Architect, private plans. Owners, J. J. Kelly Cont. Co., Oak Lane, Philadelphia, Broad and York road. Brick, 2 stories, 15x30 feet and 12x10 feet, slag roof, hot water heating, electric lighting. Owners will build.

**Dwellings (2)**, 1228-30 Wakeling street, Philadelphia, \$12,000. Architect, private plans. Owners, C. West & Co., Oxford avenue and Wakeing street, Philadelphia. Brick, 3 stories, 16x37 feet, 1 story, 16x10 feet, slag roof, hot air heating. Owner will build.

**Garage**, northwest corner Sixteenth and Rockland streets, \$8,000. Architect, private plans. Owner, J. J. Kelly Contracting Co., Oak Lane, Philadelphia. Brick, 1 story, irregular shape, slag roof, cement floors, electric lighting. Owners will build.

**Hotel (remodeling)**, 1528 Market street, Philadelphia. Architect, private plans. Owners, Wolf Brothers, care of Mastbaum Brothers & Fleisher Co., 1424 South Penn Square. Lessees, Boyle & Sweeney, on premises. Interior and exterior alterations, tile and marble work, steam heating, electric lighting, plumbing, painting, etc. Lessees will take sub-bids. Sub-bids on remodeling front now being taken by lessees.

**Residence (alts.) to Apartment House**, 37 La Crosse avenue, Lansdowne, Pa. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owner, name withheld. Brick, general interior and exterior alterations, new heating, electric lighting, plumbing, brick work. Architects taking bids due April 21st at noon. F. B. Davis, 240 North Sixteenth street; Bowden Const. Co., 1713 Sansom street, and J. Howard Roberts, Lansdowne, Pa., are figuring.

**Residences (6)**, 4342-52 North Eighth street, \$25,200. Architect, private plans. Owner, George J. Bauerle, 4314 North Eighth street. Brick, 2 stories, 14½x30 feet and

## Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

DO YOU

use the hod carrying method of elevating brick, mortar, cement, etc.? It's too old fashioned—too slow and cost-

ly—for present day building work.

"LITTLE GENERAL" MATERIAL ELEVATOR HOISTS are used by dozens of bricklayers in Philadelphia, who used to rely on the hod carrier method, which was expensive and unsatisfactory. Now they use a "LITTLE GENERAL" and save money.

Several bricklayers have told us they saved the price of the "LITTLE GENERAL" on the first job.

"LITTLE GENERALS" in Philadelphia stock ready for immediate delivery.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

Elevator operates in an opening 26" x 60". Easy to erect, easy to take down and move, convenient to store.

Phone for prices and special discount.

## As The Editor Sees It

INVESTIGATIONS carried on by the U. S. Department of Labor throughout the country have shown that there is more than \$2,000,000,000 worth of building and construction work which was held up on account of the war. If this work was resumed at once it would be a most important factor in increasing production in the hundreds of industries correlated with building and construction work and, in giving a most determined acceleration to production, would eventually mean better business and labor condition for the United States.

Contracts let in March show conclusively that building and construction works are getting under way despite the talk of high prices. With the March record—it is better than the March record in any year since 1911, excepting 1917, when Government construction made the record abnormal—in mind, the results of a study of building and construction conditions take on new significance. This study is based on 6,446 building and construction projects known to be contemplated at the signing of the armistice. The construction costs involved are \$1,892,275,000, and it is a safe conclusion that 50 per cent. of these projects, involving more than half the total construction costs, are yet to be started.

With March showing a remarkable increase over January and February in contracts let, and with approximately a billion dollars' worth of projects known to be contemplated, there appears to be

justification for the prediction that 1919 will prove one of the greatest in American history for building and construction work.

The war brought building and construction work, except for Government and war purposes, to a standstill. To develop the attitude of investors and builders on these deferred projects, a questionnaire was sent to 6,446, of which 2,882 were public projects. Of these public projects 78 were Federal undertakings, 279 State, 593 county, and 1,932 municipal. The average date—if it may be referred to as such—for these questionnaires is February 1, and they are, therefore, recent enough to clearly indicate the situation in the districts from which they were drawn. To speak in general terms, high prices of materials, wage scales, and difficulty in financing are the chief obstacles to building as indicated by the tabulation of the questionnaire information which has just been completed in the Department of Labor. It is not represented that these questionnaires cover all the deferred building in the country; rather the effort was only to study enough deferred projects to establish clearly and definitely the trend in the industry and the sectional conditions.

From Ohio 805 projects are reported; of these only 291 state that materials are high, while 36 specifically state materials are not high. Again, 42 show a shortage of material, while 163 specifically state there is no shortage of mate-

rials. The comparison of these conflicting statements suggests the prevailing conditions, and also indicates the sectional or local deviations from the general situation. Material shortages, for example, must be held to be determined by artificial and local conditions, rather than by a general and widespread rule.

The questionnaires asked for information on the nature of the project, its estimated value, whether there was a shortage of material and labor, if the prices of materials were high, also wages, and asked a detailed statement as to what materials were short and high in price, when the project was expected to start, whether any loan difficulty was experienced, if the interest rate demanded was high, if bids had been taken, and what percentage the bids were in excess of the estimated cost or previous bids.

The largest number of answers given to these specific questions appear in the high-of-cost-of-material column; next comes high wages, and then shortage of labor. The figures are 1,781 reporting high cost of materials, 1,330 report wages high, and 482 indicate labor shortage. Against the 1,781 reports of high cost of materials only 170 specifically state that the cost of materials is not high. Against the 1,330 reports of high wages only 301 state that wages are not high. On the other hand, 657 state there is no shortage of labor against the 482 reporting a shortage in the labor supply. Again, against 270 reporting a shortage of materials 834 say there is no lack

PRINTS**

of materials, although the prices are high, and many of those who had not decided to proceed with their construction work stated that they were holding off for a while, to see whether there was to be a drop in prices or if the higher level of prices was to remain.

Commenting on the situation, several stated that the last year of stagnation in the building industry due to the war only served to further stimulate the demand for all classes of buildings, which would tend to keep prices high, and they expected to resume operations to meet the increasing demand.

Those who went into detail on the high cost of materials gave brick as the principal item that was high. The number thus reporting was 359; next comes cement, 328 reporting this material high, 310 reported high prices for lumber; 242 said steel was high; and 138 indicated high cost of plumbing supplies. It should be borne in mind that most of these projects do not require steel in construction. This probably accounts for the comparatively few reports on the high prices for that material.

There were 155 reporting the cost of construction 20 per cent. excessive, 154 said 30 per cent., 73 said 40, 91 put it at 50, 23 said 60, 17 said 70, 16 said 80, 9 said 90, 37 as high as 100, and 14 over 100, making the average excess in cost of construction approximately 55 per cent.

The State of Ohio reported the largest number of projects, while Illinois leads in aggregate valuation of private and public construction work. Next to Ohio in number of projects comes New York, but New York stands third in the valuation column, Ohio holding first place in number of projects and second place for valuation. Following are the comparative figures for the four leading states:

| State.           | Number<br>of<br>Projects. | Valuation.    |
|------------------|---------------------------|---------------|
| Ohio .....       | 805                       | \$171,335,000 |
| New York .....   | 673                       | 164,465,000   |
| Pennsylvania ... | 662                       | 127,345,000   |
| Illinois .....   | 365                       | 175,045,000   |
| Total .....      | 2,505                     | \$638,190,000 |

Although Illinois leads in valuation, that State is a low fourth in number of projects, and Pennsylvania, which gets into third place in number of construction enterprises, drops down to fourth place in valuation.

In Ohio 291 report materials high in price to 36 stating that materials are not high. There are 42 reporting material shortage in Ohio to 163 who say there is no shortage in their localities. In answer to the question if there is a shortage of labor, 51 say "Yes" to 124 "No," and 71 report loan difficulty to 133 who state

specifically that they are having no difficulty in obtaining loans. Some of those who are interrupted in the matter of financing their operations say that the banks are adverse to loaning on the basis of present valuation, 80 reporting excessive cost of construction ranging from 20 to over 100 per cent., the average being 42 per cent.

In Pennsylvania 276 report high cost of materials to 22 negative replies, 57 indicate material shortage to 102 who say there is no dearth in the supply, 40 report loan difficulty to 144 specifically stating there is no loan difficulty, and 80 indicate a shortage of labor to 43 who make negative replies. The number who saw wages are high in Pennsylvania is 216 to 26 who state that wages are not excessive. Of 95 who made statements as to excessive cost of construction, 17 said 20 per cent., 27 said 30, 9 put it at 40 per cent., 22 said 50 per cent., 5 said 60, 2 said 70, 2 said 80, 2 said 90, 7 said 100, and 2 figure the excessive cost at over 100, making the average for Pennsylvania approximately 42 per cent.

In New York the "materials high" figure is 224 to only 15 who say "No" to this question. Only 4 indicate material shortage to 101 who say there is no shortage. Sixty-five report loan difficulty to 130 who specifically state that they are having no such difficulty, 52 report a shortage of labor to 91 no shortage, and 159 say that wages are high to 39 who say the opposite. Eighty-five report the cost of construction excessive, ranging from 20 to over 100 per cent., the average being nearly 42½ per cent. for the entire State of New York.

The Illinois figures are 114 reporting materials high to 3 not high, 11 reporting material shortage to 43 not short, 13 indicate loan difficulty to 17 no loan difficulty, 10 indicate shortage of labor to 50 no shortage, and 74 wages high to 24 not high. Thirty-eight report excessive cost of construction, ranging from 20 to 70 per cent., the average being a little over 35 per cent., which figure is the lowest for excessive cost of construction of any of the four leading States.

The principal shortage of labor appears to be in the Southern States and some of the Western States, but this shortage may not exist at the present time, as the ranks of labor are constantly being filled by returning soldiers. From Louisiana 31 report labor shortage and only 13 say there is no scarcity of labor. From Kentucky the figures are 9 yes to 7 no, Alabama gives 11 yes to 3 no, South Carolina 10 yes to 2 no, Mississippi 6 yes to 2 no, and Maryland 4 yes to 3 no. Virginia sends 21 reports,

stating that labor is short, and only 4 stating there is no shortage. The figures for West Virginia are 12 yes to 7 no.

With reservation for exceptions growing out of local conditions, the questionnaires indicate a tendency to labor surplus in the districts to which labor was drawn by war industry: Middle Atlantic States, the manufacturing district of New England and the northern portion of the Middle West. The tendency to labor shortage is in the districts from which labor was drawn for war industry: The South, West, and Northwest, excepting the Pacific Coast States.

The following tabulation gives the total number of projects by States:

| State.                        | Number<br>of<br>Projects. | Valuation.   |
|-------------------------------|---------------------------|--------------|
| Alabama .....                 | 54                        | \$67,110,000 |
| Alaska .....                  | 4                         | 1,100,000    |
| Arizona .....                 | 34                        | 9,580,000    |
| Arkansas .....                | 78                        | 12,225,000   |
| California .....              | 144                       | 110,000,000  |

\* \* \*

A CONVENTION of the building trades will be held in Cleveland, Ohio, May 7 and 8, when the building trades situation will be discussed, with the view of devising ways and means of resuming building work as speedily as possible.

\* \* \*

At a stated meeting the Master Builders' Exchange of Philadelphia held last week, consideration was given to the bill, now before the Pennsylvania Legislature, to register and license architects in Pennsylvania before permitting them to practice. Mr. John Hall Rankin, ex-President of the Philadelphia Chapter of the American Institute of Architects, read the provisions of the bill, which was printed in full in our issue of April 2, 1919, and explained the purposes of the contemplated law.

Some of the contractors were at first reluctant about indorsing the proposed law, fearing that the young man who had not been a college man might receive unfavorable and prejudiced consideration. Others were fearful lest persons not qualified architects should be prevented from preparing plans and specifications. Further objection was made to the law because there was no provision for appeal from the decisions of the Board of Architects appointed under the law by the Governor of the State to enforce its provisions. Mr. Rankin made clear, as the articles of the bill plainly state, that the purpose of the bill is primarily to compel the designer of buildings to label his drawings — "contractor," "builder," "architect," or whatever he designates himself—but under the law only those passing the examinations, and fulfilling the qualifications, of the Board of Architects shall be registered and licensed, and permitted to sign "R. A., Registered Architect, after their names. Under the proposed law anyone can draw plans as heretofore, but can not style himself architect in the sense of Registered Architect. As three of the five men on the Board are a majority sufficient to grant a license, there is only a most remote possibility of any prejudice arising against an applicant for the title.

Mr. Rankin explained that a board of appeal would necessarily mean an endless chain of appeals. The members of the Exchange finally approved the passage of the bill, admitting that carelessness in preparing plans and detailed drawings would be overcome and the

building trades would benefit by more exacting requirements in permitting persons to style themselves architects.

The proposed Compensation Bill now before the State Legislature was also discussed at length at this meeting of the Builders' Exchange. It was shown clearly that the rate for compensation insurance under the proposed law would be increased 60%. The members of the Exchange expressed opposition to the bill because any additional expense added to the present high cost of building would tend to retard construction work. A resolution voicing protest was therefore suggested and approved, such protest to be forwarded to the legislative bodies at Harrisburg.

NOW that the war is over an opportunity is afforded for an analysis of industrial and commercial developments which will prove important and valuable factors during the reconstruction period. One of the interesting results of war conditions in their effect on industries and communities in this country has been the increased popular interest in the subject of housing industrial workers. The high cost of building materials and of labor has also created a general interest in the question of economical design and construction of small houses, and through a study of the activities of some of the government agencies which were provided for the purpose of relieving congested housing conditions, many communities and manufacturers may gain valuable knowledge for application to problems of this nature which they are now facing.

Very soon after the placing of large contracts for war material in various sections of the country, a centralization of labor took place at such points as Bridgeport, Erie, Northern New Jersey and similar industrial centers. The demand for houses became more and more insistent; rents increased rapidly and soon it became practically impossible for the workingman to find accommodations for himself and his family. Naturally, labor turnover in various war material plants was greatly increased by this condition, as the workingman who had been newly hired soon discovered that they could not bring their families to live in the same town and that living apart was both inconvenient and expensive. Complaints soon began to reach Washington regarding this condition and various other questions bearing on labor soon evidenced the need of special organizations to handle labor questions. Roughly classifying the manufacturing needs of the government for war material, such needs emanated from the army, navy and Shipping Board.

One of the first of the government activities to feel the distinct need of establishing a branch through which all questions pertaining to labor could be administered, was the army Ordnance Department. This department had been placing extensive contracts for munitions and artillery. Many of these contracts called for the erection of new plants or plant additions, as well as the establishment of vast systems of powder and loading plants in isolated communities.

In order to meet this need a branch of the Army Ordnance Department, known as the Industrial Service Section, was created under the direction of Dean Herman Schneider, of the University of Cincinnati, and well known as an economist and labor expert.

Immediately upon realization of the importance of housing for workmen as a factor in the industrial problems of the Army Ordnance Department, Dr. Schneider sought the advice of an industrial housing expert and found upon investigation that Perry R. MacNeille, of the firm of Mann & MacNeille, Architects and Construction Engineers of New York City, was then in Washington in charge of the Architectural and Structural Section of the General Engineer Depot. Here the design and material purchasing for buildings and bridges for the expeditionary forces under General Pershing were being carried out.

The housing problems of the Ordnance Department of the Army were in brief as follows:

1. At important manufacturing centers where the placing of great contracts for rifles, artillery, munitions and other ordnance equipment had caused a sudden tremendous increase and centralization of workmen. In various existing plants the capacity of which was being rapidly increased through necessary expansion the question of finding homes for workmen had become acute. At such points all available dwelling places for workmen and their families were soon absorbed, rents rose alarmingly and the lack of housing was felt in a greatly increased labor turnover with its resultant decrease in production efficiency.

2. In "one-industry" towns which had grown up around large existing plants. At these points the placing of large orders and rapid increase in the number of workers brought about a housing famine which must be met if production was to be brought up to requirements for war purposes.

3. At isolated points where, because of their dangerous character, the vast system of powder, loading, testing and munition storage plants were forced to locate. At these points no housing was available and in building the plants great

villages for the workers were being planned and constructed.

4. The new special problem of the housing of women workers was making itself felt and demanding attention as part of their industrial welfare.

Early in January, 1918, Mr. MacNeille was officially appointed in charge of the Housing Branch which, as part of the organization of the Industrial Service Section under Dean Schneider, immediately entered upon the task of determining housing needs and making provisions to meet them.

The work of the Housing Branch was purely that of investigation and execution. All matters of town-planning, architectural design, engineering and other technical activities were carried out in the office of Mann & MacNeille under the direction of the Housing Branch and subject to the approval of the military authorities in charge of ordnance requirements and production. Horace B. Mann was at this time appointed as designing architect for the Housing Branch.

The first activity in connection with each housing problem was naturally that of investigation. C. Stanley Taylor, who was transferred from the Engineer Depot as Mr. MacNeille's assistant, and who was qualified by several years of similar investigation experience, was placed in charge of this activity. Valuable service in this connection was rendered by Captain Rex Humphrey, a realty expert of Detroit, Michigan, and C. W. Short, an architect with English experience.

To study the special problem of the housing of women, Miss Adelaide A. Richardson, particularly qualified by long experience in the welfare of women industrial workers, was appointed under Mr. MacNeille.

Communities which are now facing a housing problem and manufacturers whose plants are in localities where a housing shortage affects labor turnover, will be interested in the methods by which the Housing Branch eliminated as far as possible the expenditure of money in meeting such housing shortage.

In each case the report of a housing shortage which was seriously handicapping production was received by the Housing Branch through military channels. Immediately, before any local action was taken, an investigation of the importance to the war program of the particular product manufactured at this point was made. For example, if a housing shortage was reported in a certain locality where field howitzers were being manufactured steps were immediately taken to learn the approximate immediate requirements of field howitzers. Against this total was checked the production at other points in the country. If it was found that even with the plant in

question crippled by a housing shortage, sufficient production was being carried out at other points to meet the immediate war program requirements of field howitzers, no attempt was made to provide relief for such housing shortage. If, however, it was found that there was in total insufficient production to meet the immediate requirements, steps were at once taken to provide housing facilities in order to expedite production at the point in question.

In this case the first step was that of local investigation and the duties of the investigator were varied and complex. Upon reaching the town in question an analysis was made of the number of industrial workers on war work. Next the amount of available housing was determined, and in this manner the net housing need was fixed. The result often showed a need for houses for married workers of certain grades depending on their average earnings, or housing for unmarried workers. In many cases restaurant and recreational facilities formed an additional need.

Having determined and classified the exact need, the next step was an attempt to meet the need locally, thus saving expenditure by the government. This was done in at least three ways.

1. By determining possibilities for transportation improvements which would make available existing housing heretofore unused to meet the particular need in question. Following this line of action and under the direction of a transportation expert cars were re-routed on trolley lines; special workmen's trains were placed on railroads reaching nearby communities where housing facilities were available; ferry boats and steamers were placed in operation, omnibus lines were installed and in every possible manner the actual building of new houses was avoided.

2. To make transportation conditions better; hours of employment at munition factories and arsenals were staggered on the request of the Housing Branch for the purpose of relieving congestion.

3. In some cases local organizations were induced to finance and build the necessary housing as a valuable economic addition to the community. In such case assistance was given by the Housing Branch on the question of design, engineering, construction and the issuance of priority orders for building material.

Having reported every possible manner in which actual requirements for government expenditure could be cut down, the investigator outlined the net housing needs of the community to the head of his department. The matter was then immediately taken up by Mr. MacNeille in two of its aspects—first to arrange for the financing of the projects (which in

some cases was done by adding to the contract cost of the material being produced locally); second, to direct the preparation of architectural and engineering drawings and data. Finally the finished town plan, architectural designs (up to the point of working drawings) and outline specifications were turned over to the Construction Division of the Ordnance Department, to the Construction Division of the United States Army, to the manufacturer as agent of the government, or to whatever branch of government activity had jurisdiction over the necessary construction. From this point the activities of the Housing Branch on this project were confined to construction supervision and general inspection, while its advisory service was kept open to the builder at all times.

A second activity of the Housing Branch was that of supervising large housing projects which were being carried on under the direction of local or plant architects at the time of the inception of the Housing Branch. Thus much of the work being done at powder and bag-loading plants came under the general supervision of the Housing Branch, but in practically all these cases it was found that the work was being well carried on and expedited so that interference and delay was unnecessary. At all times it was the policy of the Housing Branch to avoid interference and delay in existing projects, realizing that a certain amount of war waste was unavoidable and even contributory to the speeding up of enforced production which has proven such an important factor in the winning of the war.

In working out town plans and designs for houses, it was necessary to develop to its highest point economy in construction, but an attempt was made at the same time to create designs of a sufficiently artistic nature to make for attractive communities and living places for the war workers. Some of the houses and buildings may well serve as examples for those who contemplate designing similar houses or homes of an inexpensive character, while the town plans show many phases of interest to the realty developer or expanding communities.

The activities of the Housing Branch covered a period of approximately seven months from its inception on about December 15, 1917, to July 15, 1918, at which time by Act of Congress the housing activities of the Army and Navy were centralized under the Labor Department Housing Bureau.—*Realty*.

The Philadelphia Chapter of the American Institute of Architects has elected the following to attend the fifty-

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residences (42)**, both sides of Osage avenue, between Sixty-second and Sixty-third streets. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Herman Beckershoff, 6212 Spruce street, Philadelphia. Brick, 2 stories, 16x46 feet, slag roof, stone foundations, hot water heating, combination lighting, tile and marble work, oak floors. Owner will be ready for sub-bids in two weeks.

**Residences (20)**, Marlyn Road, north of Diamond street. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, John J. Marshall, 1115 Marlyn Road. Stone and brick (10 English type, garages in basement, 10 Spanish type), stone foundations, slate or tile, tin and slag roofs, oak floors, hot water heating, combination lighting, tile and marble work. Owner ready for sub-bids.

**Residences (8)**, Sixty-ninth avenue and Broad street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Russell H. Foster, 1430 Sixty-eighth avenue, Philadelphia. Stone, 2 stories, 16½x66 feet, slag roof, stone foundations, hot water heating, electric and gas lighting, tile and marble work, oak floors. Owner ready for sub-bids.

**Residence**, Drexel Hill, Pa., \$12,000. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner's name withheld. Stone, 2½ stories, 40x40 feet, slate roof, oak floors, hot water heating, combination lighting, tile and marble work. Preliminary sketches in progress.

**Apartment House**, Overbrook, Pa. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner's name withheld. Brick, 3 stories, irregular size, slate and slag roof, oak and pine floors, stone foundations, hot water heating, combination lighting. Preliminary sketches being drawn.

**Residences (2) (alts. and add.)**, Broad and Oxford streets, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner's name withheld. New front, brick and stucco, interior alterations, oak floors. Plans in progress.

**Dwellings and Garage**, west side of Ninth street, south of Sixty-sixth avenue, \$59,000. Architect, private plans. Owner, Albert McBain, 6547 North Thirteenth street, Philadelphia. Brick, 2 stories, 16x46 feet, and 1 story, 10x16 feet, slag roof, hot water heating, electric lighting. Owner will build.

**Store and Dwelling (alts.)**, 2336 Ridge avenue, Philadelphia. Architect, private plans. Owner, J. Podd, 2336 Ridge avenue, Philadelphia. Brick, entire new front. E. C. Durell, 1713 North Twenty-fourth street, is taking sub-bids.

**Residences (6)**, 940-42-43-45-47-49 Berbert street, \$33,000. Architect, private plans. Owner, J. D. Fotheringham, 1000 Arrott street, Philadelphia. Brick, 2 stories, 16½x43 feet, slag roof. Owner will build.

**Garage**, 4677-89 Asylum Pike, Pa., \$2,800.

Architect, private plans. Owner, J. D. Fotheringham, 1000 Arrott street, Philadelphia. Brick, 1 story, 20x140 feet, slag roof. Owner will build.

**Warehouse**, 943-51 North Second street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, United Wholesale Grocery Co., on premises. Reinforced concrete, steel and brick, 3 stories, 80x200 feet, slag roof, steam heat, electric light, yellow pine floors, metal lath, 1 elevator, rolled steel sash and skylights, roof ventilators. Architect taking bids, due April 25th.

**Coal Pockets and Trestle**, Trenton avenue and Westmoreland street. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owners, Owen Letterer's Sons, on premises. Concrete and timber, 256 feet long and 16x16 feet, slag roof, concrete foundations, iron floor and work. Architect taking bids, due April 23rd, 2 P. M. H. E. Baton, 1713 Sansom street; Wark & Co., 1737 Filbert street; Brown-King Const. Co., Commercial Trust Building; Robbins Cont. Co., Lafayette Building; Henry C. Dahl, 231 South Eighth street; Barelay White Co., 1713 Sansom street, are figuring.

**Store (alts.)**, 142 South Fifteenth street, Philadelphia. Architect, Paul J. Henon, Jr., 10 South Eighteenth street, Philadelphia. Owner, Cheri, Inc., care of J. G. Patton, Fifteenth and Chestnut streets. Electric work, marble work, leaded glass, woodoleum flooring, cabinet work, plastering, painting, hardware. Architect taking bid from Lam Building Co., 1001 Wood street, due as soon as possible.

**Moving Picture Theatre**, 724 Market street, Philadelphia. Architect, Paul J. Henon, Jr., 10 South Eighteenth street, Philadelphia. Owner's name withheld. Brick and stone, 1 floor, 30x130 feet, tile and marble work, electric lighting, ventilating system, fire doors. Plans completed. Ready for bids in a few days.

**Garages (12)**, 7257-73 Limekiln Pike, \$7,200. Architect, private plans. Owner, James B. Eisele, 7265 Limekiln Pike, Philadelphia. Brick, 1 story, 12x20 feet, slag roof, cement floors. Owner will build.

**Dwellings (4)**, south side of Olney avenue, west of Front street, \$14,000. Architect, private plans. Owner, Michael H. Riegel, 1818 West Huntingdon street. Brick, 2 stories, 16x43 feet, slag roof, hot water heating, electric lighting. Owner will build.

**Residence**, Upsal street and Wissahickon avenue. Architect, L. V. Boyd, Harrison Building. Owner, John A. Seeds, on premises. Stone and brick, 2½ stories, 64x40 feet, slate or shingle roof, stone foundations, hot water heat, electric light, tile work, pine floors, iron work. Architect has received bids.

**Bank Building (remodeling and add.)**, 4356 Frankford avenue. Architects, Stearns & Woodnutt, Stephen Girard Building, Philadelphia. Owners, Second National Bank of Phil-

adelphia, at Frankford, Franklin Smedley, president, on premises. General remodeling of present building and addition. Plans in progress. Will take bids in one month.

**Greenhouse and Garage**, Wissahickon avenue and Hortter street. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owner, John Bromley, Germantown. Brick, 1 story, 14x20 feet and 28x23 feet, slate roof, cement work, stone foundations, hot water heating, electric lighting. Architects taking bids, due April 24th. H. E. Baton, 1713 Sansom street, and H. H. Burrell, 206 South Quince street, are figuring.

**Garage**, Seventh and Bristol streets, Philadelphia. Architect, private plans. Owner, A. Goetz, on premises. Brick, 1 story, 90x36 feet, slag roof, cement floors, stone foundations. H. H. Wehmeyer, 509 West Cumberland street, is figuring.

**Residences (9)**, Fifty-seventh and Sansom streets, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Mr. Schlosberg, 1217 Market street, Philadelphia. Stone, 2 stories, 15x40 feet, slag roof, stone foundations, hot water heating, combination lighting, pine floors. Owner will be ready for sub-bids April 23rd.

**Stores and Dwellings (3)**, South Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Brick, terra cotta trim, 2 stories, 16x49 feet, slag roof, oak and yellow pine floors, stone foundations, hot water heating, combination lighting, tile and marble work, galvanized iron work, metal ceilings. Plans in progress.

**Garage**, 2830-32-34 West Nicholas street. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Brick, 1 story, 55x52 feet, terra cotta trim, stone foundations, slag roof, steam heating, electric lighting, cement and pine floors, hollow metal skylights, flush bulks, iron work. Ready for bids in two weeks.

**Garage**, 4819 Woodland avenue, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Brick, 1 story, 37x44 feet, slag roof, stone foundations, cement floors, steam heating, electric lighting. Ready for bids in a week.

**Store and Dwelling (alts. and add.)**, 1436 South Fifty-second street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner's name withheld. Interior alterations, slag roof, yellow pine floors, combination lighting, tile and marble work, flush bulk, metal ceilings. Architect ready for bids.

**Residence**, York Road and Bristol street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, A. D. Robinson, care of W. O. Mahon, 6718 North Broad street, Philadelphia. Stone and brick and stucco, 3 stories, 30x36 feet, slate and slag roof, stone foundations, hot water heat-

## BOWERS BROS. & CO.

1629 Ludlow Street  
Philadelphia, Pa.

### Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

## WILLIAM M. LLOYD COMPANY

Established 1868

29th and Ridge Avenue

PHILADELPHIA

Philadelphia, \$1,500. Owner, Dr. Dawson Huber, Brookline, Pa. Brick, 3 stories, interior alterations, electric lighting. Contract awarded to W. O. Springer, 1624 Latimer street.

## Proposals

### INVITATION FOR PROPOSALS

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 8, 1919. SEALED PROPOSALS will be opened in this office at 3 P. M., May 6, 1919, for alterations to the United States Post Office at Bridgeport, Connecticut. Drawings and specifications may be obtained from the Custodian or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., April 11, 1919. SEALED PROPOSALS will be opened in this office at 3 P. M., May 9, 1919, for a clock, fire-alarm, watchman's clock and low voltage feeder systems in the Arlington Building, Washington, D. C., in accordance with drawings and specifications, copies of which may be had at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

The Roman Mosaic & Tile Company, Inc., for twenty years located at 435 Green street, Philadelphia, Manufacturers and Dealers in Marble Mosaics, Terrazzo, Ceramics and Tiles, has consolidated with Vincent Cianci & Co., 3428 Warren street, Philadelphia, which concern has been in the same kind of work for the same length of time.

The new company will be known as The Roman Cianci Co., Incorporated, and, for the present, will have offices at 3428 Warren street, and warehouse and shop at 3429 Filbert street.

Mr. Angelo Trevisan is President of the new company, and Mr. Vincent Cianci, Secretary and Treasurer.

The purpose of the consolidation is to effect a more efficient organization for executing work of the Architectural and Building Trades.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.  
**DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.**

#### AS THE EDITOR SEES IT.

(Continued from Page 226.)

second annual convention of the American Institute of Architects which is to be held in Nashville, Tenn., on April 30, May 1 and 2.

Delegates: C. L. Borie, Jr., D. Knickerbocker Boyd, John I. Bright, Arthur Brookie, Albert Kelsey, Charles Klaunder, John H. Rankin, E. V. Seeler, Frank R. Watson.

Alternates: G. H. Bickley, Elliston P. C. Bissell, Wilson Eyre, Edmund B. Gilchrist, John McA. Harris, Leicester B. Holland, George I. Lovatt, Robert R. Goodwin, Thomas Nolan, George Page, C. C. Zantzing.

The headquarters of the delegates will be at Hermitage Hotel, and the sessions of the convention will be held in the State Capitol, the use of which has been extended by the authorities of the State.

The principal matters before the convention this year will be the reports from the various Post War Committees throughout the country affecting the architectural profession, the building industries and the public in general as a consequence of the great conflict.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

In the construction of the steel frame for the Statler Hotel at St. Louis, Mo., last year steel erection proceeded at the rate of two stories every 4½ days. The building is 150x130 feet, 20 stories high and contains 4,500 tons of steel, 700 tons of which were used in the basement. A 10-hour shift was worked for the first few weeks. The steel erection was done with two 12-ton gyped derricks.

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

## As The Editor Sees It

THE editor is in receipt of the following most interesting letter from Mr. D. Knickerbacker Boyd, widely known architect of Philadelphia. If the apathy charged by Mr. Boyd exists, is it not time that architects awaken to the opportunities and responsibilities which have come to them with the advent of the post-war period. "In a recent issue of the highly prized *Bulletin* of the much-alive Illinois Society of Architects," says Mr. Boyd, "I note the following:

"Every architect should read and study the addresses given before the Reconstruction Conference of the Chamber of Commerce of the United States.

"With this statement I heartily agree, but it only emphasizes the thought I have had in mind without the time to express it sooner, and offers me the opportunity to set it down in the form of a few remarks to you. Let me entitle them: 'Architects of America, Where Are You?'

"When the Reconstruction Conference to which you refer was called by the Chamber of Commerce of the United States, its purpose was given the widest publicity; and literature, including programs and invitations to participate, were sent broadcast throughout the country. I know that architects were included, for I called upon the Chairman of the War Service Committees of the Chamber of Commerce in Washington to be sure of this.

"You will readily realize that to as-

semble the Nation's industries was a stupendous task and to effect this a very comprehensive program was worked out.

"The meetings began with the assembling of 350 or more War Service Committees at general sessions, then in groups of 35 related industries, and finally in groups of 10 major industries.

"In these, every branch of building material and construction interests was scheduled for representation, which fact in itself, one would think, should have interested some architects out of the nearly 6,000 which are presumed to exist in America.

"To make sure that those ostensibly interested in the source and nature of building materials and in the appropriate use of such materials were afforded representation, one of the related group meetings the first day was assigned to 'Engineers, Architects, Accountants and Specialists,' another to 'Trade Papers, Magazines and Newspapers.' These two groups, which included also real estate men, fire prevention authorities, and others, met the next day and evening as a combined major group under the classification, 'Industrial Professions.'

"Surely you, who are wide-awake enough to say that the addresses delivered at this conference should be read by architects, would assume that with these preparations made for architects to participate in the deliberations, there would at least be a fairly representative gathering of this profession.

"You would perhaps imagine that if in-

dividual architects did not participate, that the one representative organization of the profession would have present, let us say, the Chairman or a member of the Committee on Structural Service, or the Committee on Materials and Methods, or on Fire Prevention, or if no others, the Committee on Public Information, or you might assume that the Journal of the Institute, whether as the 'organ' of the profession or as a 'popularized version' would be there. But it was not.

"And will you believe me when I tell you that at the one afternoon session and two evening sessions there was but one architect present, namely, the writer? And I could not stay long at any of these meetings, for I was representing the United States Housing Corporation, which, with characteristic enterprise, sent its Chief of Materials Information Section to this conference to attend as many of the meetings on building materials as possible.

"That many things of value eventuated, however, is evident from what you said in the paragraph with which this letter opens, under which would fall the very excellent address of the Chairman of our first meeting on 'Human Engineering in the Reconstruction Program,' by J. Park Channing, of the Engineering Council, in addition to which, I would call your attention to resolutions on Housing, Fire Prevention, Transportation and other subjects in which *architects should be interested*. The question is, ARE THEY?

"Were this an isolated case of non-

PRINTS**

participation of architects in affairs where their training and experience should make it an obligation to their conscience and their country to attend, it might be ascribed to the prejudices of the present president of the Institute of the Chamber of Commerce.

"But that such is not wholly the case, let me proceed with some questions which I hope you will find occasion to address to the architects of America through your columns, with this understanding: That they apply less to members of the Illinois Society than to the architects of almost any other section that I know of. There are some signs of activity being evidenced in certain other quarters; least noticeably so, however, I regret to say, in Philadelphia, where the Chapter has, among other things, resigned its membership in the American Society for Testing Materials just as I was about to suggest to other Chapters of the country that they consider joining this most important organization and following the lead of the Illinois Society and the Cincinnati Chapter. Not for the sake of the Chapters, mind you, but to afford their members opportunities to take their very necessary parts in the Committee activities and deliberations of this Society which is doing so much for the users of building materials with the most meager assistance of architects. Five is the number 'present' in this case, out of six thousand, of which but two, Professor Thomas Nolan and the writer, were present at its last Convention in Atlantic City. Read the list of papers and reports submitted then, many of them having the most vital effect on building construction, none of which were mentioned in the Journal of the Institute. Do you wonder I say again, *Architects, Where Are You?*

"And the Philadelphia Chapter has also resigned its membership in the National Fire Protection Association, reducing the fifty architectural representatives to forty-nine in an organization which, primarily organized for the protection of property, is now the most important in this country concerned with the safety of the occupants of buildings.

"Its last Convention was fairly well attended because it was held in Chicago, but how few architects even at that show, by membership and attendance, their interest in this most important phase of human welfare.

"But I am getting along too fast, and in order to adhere somewhat to chronological order will ask you to go back with me to April, 1918, and, reading from the Proceedings of the Convention of the Institute, note the following remarks with which Mr. E. J. Russell closed his paper in 'The Building Situation.'

"If we would unite we would be in a splendid position after the conclusion of

the war to insist upon and obtain a department of public works, something we all recognize is greatly needed.

"From an educational standpoint, the benefits would be tremendous. We would be educating ourselves and those engaged in the building business, and through that mutual education would come also the education of the public. We could also improve the standards of building and incidentally reduce the losses by fire. There has been in the last few months a well-defined movement looking towards a federation, and the word has gone out that that may be a success, providing it may have the leadership of the architects, and that is what I wish you to consider most carefully. To my mind it is the most vital thing that has come up in connection with our profession for many years.

"We are in a position to take the leadership, to earn the title of master builder. If we do not do it, we have lost a golden opportunity and we will have no one but ourselves to blame.'

"Then read the remarks made by the retiring President, Mr. J. Lawrence Mauran:

"The American Institute of Architects has accepted the task of initiating a national conference shortly to be held, to which representatives of all factors in the building industry will be invited to come and take part in a discussion, first, of a plan for organizing this really tremendous undertaking, and, second, of providing the ways and means for putting that plan rapidly under way.

"When the extent and possibilities of the service which may be rendered to the Nation are considered, the profession of architecture may well feel proud that, almost by tacit consent, the task of initiating and helping to guide this work has fallen to the American Institute of Architects. Plans are already maturing for the calling of a conference and the incoming Board of Directors is pledged to the carrying out of this momentous project.'

"This 'most vital thing that has come up in our profession in many years'—this 'momentous project,' has come to naught so far as architects are concerned through the action, in calling it off, of two men, the present President of the Institute and the editor of the *Journal*.

"When the Federation was brought into being very shortly thereafter by the Chamber of Commerce of the United States, architects were asked by the President of the Institute to stay away from the meeting, and when the organization meeting of the National Federation of the Construction Industries was held in Atlantic City, on December 9, 1918, how many architects were on hand to offer counsel or take part in discussion? Just

three! Mr. Fullerton, of the Gorham Manufacturing Company inquired about the lack of architects in such an organization of the building industries, and was informed by the Chair that the architects had been invited to participate or affiliate but had not as yet done so.

"Let us consider the case of concrete—surely architects should manifest an active interest in its development and use. But when the writer was sent to the last Convention of the American Concrete Institute by the progressive United States Housing Corporation to ascertain latest data on the use of concrete in house construction he found but one other architect there. A paper was read by an architect and a paper was to have been presented by another architect, neither of whom are members of the Institute.

"Take the matter of educational institutions and buildings. How many architects attended the Convention of the American Educational Association in Atlantic City? I have only heard of two, one of them not a member of the Institute, who is Chairman of an important committee on standardization of school-house construction. How many architects are members of this Association I do not know.

"Take also the matter of safety. At the last Convention of the National Safety Council held in St. Louis, a special session was devoted to safety during building construction. I hope that some architects were there to take part in discussion if not to address the meeting. I have no knowledge that they were, nor have I heard that the Institute took cognizance of the meeting through its Committee on Structural Service or its Committee on Materials and Methods.

"I do know that when on January 15 of this year the Bureau of Standards called a conference on National Safety Codes, I was the only architect present of about one hundred men who were there, chiefly engineers and others interested in structural matters, as well as several men who like myself represented the Department of Labor. I understand that the Institute was invited, but can you possibly tell me why it was not represented with many men so well qualified to act right in Washington at the time?

"And so it goes, over and over again, the same story. I could mention many other instances where nationally and locally we as architects fail to take our part in the affairs of the world.

"We have a 'Post War' Committee, headed by your Mr. N. Max Dunning—no, our Mr. N. Max Dunning (and a finer leader could not be found). But while it is performing its fine work, for which there is great need, why all this inaction on the part of the Institute and the profession?

"The opportunities surround us on all sides to make our impress and to perform public service. Why wait to be told by any Convention about some of the things we ought to be up and doing without delay.

"And what an opportunity for our own Committee on Public Information to get busy. It has been so inactive the past two years that the Board in its report to the last Convention urged that it become active, thereupon a new Committee was appointed which is identical with the Committee on Publications, and, instead of its activities expanding, they become ingrowing. The next thing we know the President proposes to the Board that the Committee on Public Information be eliminated, and now the Board asks for authority to withdraw \$10,000 from the Reserve Fund to pay for current activities.

"If the officers will perform the functions for which they were elected, and if the Board, the Committees and each individual member will do their parts to expound the interest and activities of the Institute and the profession, we can show the people of this country where the architects are, retain and reorganize the Committee on Public Information and 'reserve' the \$10,000 in the fund where it belongs and where it was intended to stay.

"Let us all say to ourselves firmly that we will get into the activities of the world and place our profession among the leaders, where it belongs, and in the words of our own Constitution, make it of ever-increasing service to society.

"I, for one, will welcome the opportunity, which has the past year been denied me by the President of the Institute, to assert my rights as a member, in criticising the editorial policy of the *Journal* of the American Institute of Architects."

THE Government has been widely advertising the urgent necessity of "building now" and emphasizing the folly of waiting for a most improbable drop in building prices. As evidence of its good faith, the Government has issued a statement from the Division of Public Works and Private Construction of the Department of Labor, showing that the Federal Government is planning to spend \$305,369,464 on public improvements, including \$266,000,000 for Federal aid for State roads by the end of the fiscal year 1921.

G. W. Buchholz, Acting Secretary, Associated General Contractors of America, criticises the Government's statement regarding this matter, "for," says Mr. Buchholz, "while it is a statement of fact that the Government will spend \$305,369,464 on public improvements and buildings, that fact will in no way im-

prove present conditions, as the bulk of this money will not be spent until the years 1920 and 1921. It seems to me, therefore, that this circular is put out with the intent of camouflaging the fact that our Government is not proceeding with public improvements as it should, did not release approximately \$93,000,000, which was contemplated for Treasury Department buildings, did not appropriate the \$750,000,000 which the railroad companies so urgently needed, and is, therefore, primarily the cause of the present large number of unemployed, and yet, paradoxical as it may seem, it is vigorously urging other people and private interests to spend their money and "Build Now."

\* \* \* \*

THE fact that a new price level exists has been by this time well established by various eminent authorities. The urgent need for building of all description is so very evident that it seems as though all doubt as to the advisability of building now should have disappeared.

In an address, "Are Prices Stabilizing," delivered recently before the American Institute of Architects, New York Chapter, T. S. Holden, Investigator, Economics Section, Division of Public Works and Construction Development, United States Department of Labor, summed up the situation most concisely.

"In conclusion," said Mr. Holden, "after a somewhat extended study of prices, it is the opinion of the Division of Public Works and Construction Development that a new price level has been established by economic conditions attending the world war, and that economic forces appear to have already acted to stabilize prices at a level below which they are not likely to fall by any appreciable amount in the near future. It is believed that the growing confidence in the future of business in this country, evidence of which is seen on all sides, is well justified by the facts that have been learned through the study of the price situation. Evidence of the stability of business today is the fact that during five months' period of stagnation, the number of business failures has been unusually low.

"At the present time there is less concern over high prices than there is with regard to the stability of prices. It appears that the wisest business men are those who decide now to go ahead with the construction of buildings and the production of goods; the need for both forms of activity are more imperative now than ever before.

The "Guide" is published weekly. It comes to your office fifty-two times in a year for five dollars.

## BUILDING MATERIAL PEOPLE TO CONFER

### Problems of Construction and Production Will Be Threshed Out by Real Estate Men

When the members of the National Association of Real Estate Boards gather in Atlantic City at their national convention in June they will be given a glimpse of the inside details of one of the unique post-war gatherings held in this country.

Virtually, one-third of the industries in the United States are engaged either in construction or the production of materials used in the construction of buildings, and on May 7, 8, scores of the biggest men interested in this industry will meet in Cleveland, Ohio, to discuss means for the restoration of all structural enterprises to pre-war activity. The real estate men will be represented by many members under the leadership of Louis A. Moses, of Cleveland, Chairman of the Committee of their national association, dealing with construction matters.

When Mr. Moses gets to Atlantic City he will lead the conference on housing and rebuilding. All of the information secured from the experts in all lines of construction and building material manufacture and sale will be digested, tabulated and given in detail at this conference, which will be followed by a general discussion. Action of the Chamber of Commerce of the United States at its convention at St. Louis on the reconstruction policy of the United States, as well as the conclusions of this rebuilding congress in Cleveland, will be analyzed and some definite action will be recommended to the real estate men's convention that the live men in the real estate profession may declare themselves definitely on the readjustment plans of the country in regard to rebuilding and readjustment of industry generally.

Full report of all the discussion at the Cleveland meeting will be all the more interesting, for all sides of the problem are to be represented. Among those who are expected to be present are Charles M. Schwab, Frank A. Vanderlip, Otto Kahn, Walker D. Himes, Samuel Gompers, Frank Morrison, and others.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

**Residences and Garages (3)**, Drexel Hill,

## Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

### WILLIAM M. LLOYD COMPANY

Established 1868

29th and Ridge Avenue

The illustration shows the installation of the famous "Star" Ventilator on the War Trade Board Building, Washington, D. C.

## "STAR" VENTILATOR (Patented)

The "Star" Ventilator was adopted by the U. S. Government as its War Standard for cantonments and other important buildings, on account of its **HIGH EFFICIENCY** and **SIMPLICITY**.

The Thousands of "Star" Ventilators in use on public buildings, schoolhouses, mills, warehouses, and similar structures throughout the country, proves their superiority over other types.

We also manufacture Evans "ALMETL" Fire Doors and Shutters, Metal Tiles and Shingles, approved by the U. S. Gov., and High Grade Roofing Tin.

### An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

### ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

## As The Editor Sees It

IN last week's issue of the GUIDE we printed a letter from Mr. D. Knickerbocker Boyd, criticizing the architects' apparent lack of interest in affairs vital to his profession. Mr. Boyd drew his conclusion from the poor attendance of architects at conventions and meetings held recently, in this section of the country, where matters of vast import to architecture and construction were discussed.

In a recent issue of *The Pacific Coast Architect and Engineer*, "The Architect and His Education," by Carl F. Gould, A. I. A., originally read at the annual meeting of the Washington State Chapter American Institute of Architects, is full of suggestions and ideals which if put into practice will lift the architect from the habits of carelessness and sloth, into which he has fallen, according to Mr. Boyd's impression.

"Are we not now about to enter a revolutionary period or moment of protest in the world's educational history?" asks Mr. Gould. The term "educated man" does not carry with it the universal approbation it did a few years ago, as we all realize. The educated man as such today, is considered erudite. The erudite person we consider, I believe, one who has an avaricious intellectual fund of information, rather inclined to exhibit it, but when deeds and actions are needed, his interpretation somehow does not apply, and he is discarded for one who has, maybe, a crude solution, but nevertheless one that works.

We know ourselves that the well-trained man is, generally speaking, capable of handling problems which the public does not give him credit for being able to solve. The consequence was and still is that many jobs which properly should come into an architect's office, go to contract designers and others who have no training or adequate experience. It is the tragedy of the profession. These men, however, are able to get away with it because, even in their crude manner, they make certain, above all, to bring themselves before the public. The public does not today go out of its way to rout out hidden talent. Talent must come forth and make itself evident or go unused.

In order to analyze this problem we will consider three phases of education which may, we hope, throw some light on this more than unfortunate situation. Education of the student, education of the architect and education of the public.

Have we, or our so-called best educated associates, been able to cope with our present-day problem satisfactorily? Has the education of an architect been such, within our experience, or observing that of others, one which has or has not prepared him for the conditions in which he now finds himself—the everyday, workaday world? This, of course, will be answered by each individual according to his interpretation of what is satisfactory. But has the education of the architect had equally successful ap-

plicable results, as, say, that of the engineer, lawyer, doctor, chemist, etc.?

My answer would be that of all the professions, we have obtained the least apparent success or recognition from the public. If that is so, then the next grave question we must ask, is it the faulty education which we received which has brought our profession so low in public esteem, or have we failed to be instructed in the correct manner in which to exhibit our "wares" to the public, or is there something wrong with the public?

As soon as the human mind becomes conscious of the pleasure an orderly arrangement gives, it then begins to apply order in conscious fashion. The orderly supports must have correspondingly orderly rafter-ends, and these in turn, due entirely to the necessity of construction, give regularity of spacing to all the parts. As wealth and leisure increase in the early civilization, the conscious sense of order becomes so keenly appreciated that the spacing of columns and rafter-ends is looked upon as something worth while per se, and abstract beauty comes into the world as a form of conscious human expression. From that moment civilization begins to weave its marvelous web of abstract form, which has been an expression of its joy of existence ever since. Without beauty of form, what a poor place to live in this world would be! If it were possible to emerge from the cave, our schools and our homes, our business blocks would be all of sim-

ilar story heights, similar openings for light and entrance, there would be no entheses to columns or supports, no sensitive channeling with their varying play of light, no crown mold with their sensitive anthemion ornament, no sculptured tympanum—a world from the beginning to the end of drab uniformity.

If, however, we were to believe the average business man, that unfortunate individual who temporarily occupies life's stage, it would be just such a world that he would drag down upon himself. One of these practical affairs which he is so constantly reiterating, and why, for goodness sake, the architect has not the courage to give him what he wants, or rather, what he says he wants; but no, we always, by indirection, give him more than he thinks he wants in the way of architectural impressiveness, and he goes away proud at heart in the possession of something people tell him is impressive, and that at once reacts upon his self-importance.

Who does not know the enthroned banker, glorying in his marble, bronze and gilt, which if taken from him would leave him naked indeed?

In face of all difficulties, must we not therefore persist in giving the public what it does not apparently want in the way of architecture and design?

If then we admit, which probably some of you do not, that design still has a function to perform even in spite of the receiving public hostility, let us inspect with care the types of architecture we are endeavoring to impose on this practical era of ours. Let us see how these various types of architecture have been the result of our educational process, and whether or not they adequately fit the modern world apparently industrially made.

Are not the examples of office buildings on every city's thoroughfare, rising story upon story, accentuating the horizontal members, and topped by a huge classic cornice, are they not architectural perverses? We see their great blank side, but are unable ever to appreciate them from the angle of the drafting board design. Again we have in our midst splendid models in red sandstone, of deep revealed medieval architecture, round-arched, trying their very best to squeeze themselves into the requirements of alert office buildings. Perhaps, after all, our dumb business man may have reason to object, and perhaps we are reaping the fruits of the sins of the early practitioner.

They, Hunt, Richardson, and others, obtained their education in foreign lands by travel and little superficial study in the Ecole des Beaux Arts. They sketched beautifully and saturated their minds with the French Renaissance, the Romanesque and the Palladian classic.

They came back to this country during a period in which architecture was at its very lowest ebb—from 1855 when Richard Hunt returned to New York, until perhaps the Chicago World's Fair. They found an architecturally sterile field, and their individual preference for style found no opposition and was imposed broadly in many exceedingly beautiful monuments without discrimination, whether Fifth Avenue residence, bank, club or office building. The conditions of the problem, structural or otherwise, were secondary to the design. The problem was imposed from without, and the conditions of utility were lightly regarded. Every city from the Atlantic to the Pacific, has examples of work of these men or their followers. The World building in New York gave the suggestion for such buildings as the Pioneer and Burke buildings of Seattle, etc., which it would be impossible for us to conceive as a basis for an evolved type. We must give credit to these men for establishing a high standard of scholarliness in the profession, and raising the architect in public esteem, but they utterly failed to establish sequence in architectural evolution.

After these men had held sway there appeared on the horizon a younger group, headed by Sullivan of Chicago, which swung to the opposite side of the pendulum, scorned European precedent, and in a vigorous and highly commendable way, endeavored to bring about a solution of the architectural enigma, by solving the problem purely and entirely on the basis of structure and ornamental application without precedent devised on the basis of cross sections of the sea anemone; delighted in ignoring all historic and abstract design previously devised. A wave again coursed through architectural design, of which we find a reflex, in some cases excellent, in other cases totally without merit, such as the Melhorn Building and the Moore Theatre, Seattle. Again the sequence of architectural evolution is broken, these designs no longer have weight, although much has been contributed to a more accurate architectural thinking process, that is, the evolution of a design from the conditions and based upon the conditions. The designs of this group of men seem to have failed. As we review the whole history of architecture, we find no individual who has successfully stemmed the current of architectural tendencies. The great men of the past, Pericles, Michael Angelo, Suges, seem to have obtained success only by re-created masterly summaries of the current architectural thinking, and not by going off at tangents of their own individual concoction. Our riot of individualistic architectural ex-

pression of modern times which we so deprecate, is due, without question, to the fact that we do not sufficiently react with the public; we are left too much with our own individual interpretation. We need the intelligent reaction of the public to obtain permanent results. The Greek Temple had been slowly evolving for hundreds of years before the perfected Parthenon was built. The thoughts and ideas upon which the great cathedrals were designed and constructed have a miraculously woven sequence through the Romanesque even to the Roman. Louis Sullivan, Frank Lloyd Wright, Richardson, Hunt, all tried and are trying to impose an architecture upon the world, each as different in its fundamental intention as could be, and evolved out of an unsocial and highly individualistic mental concept.

Now what we need is, first of all, more collective thinking, both on the part of the architect and on the part of the public, and until we do think more nearly alike it is doubtful whether we will make progress towards a permanent architecture. I am sure I perceive protest, protest against uniformity—it has been our slogan above all to be original. The public says, build me a house, I don't care what or how, the only condition I make is, it shall have absolutely no semblance to its neighbor's. Any suburban street in any American town is evidence of this fact. An heterogeneous assortment of every period and type, and the whole commonplace, misfit, sterile and terrifying in its ugliness.

Compare the beautiful little town of Broodnay in the Cotswald (or the newer town of Forest Hills). Simple domestic architecture, all Tudor, even those recently built, each expressing individuality and solving the individual problem, but the whole portraying a unity of effect which leaves a permanent impression of charm and domestic friendliness.

Snyder in New York has devised a school design which he has improved as it has been repeated, but St. Louis and Chicago discard the type because their architects would be criticized for plagiarism if they followed his lead. The poor long suffering school problem is still being distorted by being forced into Romanesque, Art nouveau and every variety of classic design.

The newer education shows tendencies toward a more rational and greater uniformity of method. It does not discard historic precedent; it brings into the foreground the great masterpieces of the past for inspiration; it analyzes them in terms of the then existing conditions, but above all it teaches us to solve our present day problem in terms of practical requirements, conditions of construction, materials, locality and cli-

mate. It remains for our educational process to be willing to search out greater universal tendencies and develop our thought in their directions. However much we older men may be able to adjust our thinking process to the newer order, for the newer order is coming as certain as day follows dawn, we can never do so with the agility of the embryonic architect or the student who is now getting his ground work established. Our schools of architecture should be the most fertile preparatory field for the mold in which he eventually must find a niche. We can only hesitatingly forecast what this mold will be, and prepare imperfectly our courses of instruction for the boys who will enter it.

The two great conflicting points previously expressed, the following of historic precedent with such close servility as to create misfits; or the utter ignoring of precedent and creation of sterile riot of individuality. No architect's education could, we believe, be considered complete without an intelligent understanding of historic styles, without being able to interpret the subtle fineness of the Greek, the sumptuous dignity of the Roman, or the austere aspiring quality of the medievalist. The student's problems will by no means close at this point. He must be taught the processes of analyzing a problem accurately in terms of its conditions; be able to reduce the complex into its component elements, sense the essentials of a problem, place them in their relative order with equal skill, whether the plan of a workman's cottage, an industrial plant or a courthouse. All the while his thoughts must be shot through with an awakened sense of relative truth in form or proportion. This sense of pure beauty to be attained variously by drawing from life, modeling in clay, exercises in color, and by the abstract study of form or esthetics.

In this analysis of instruction we cannot omit the study of mathematics and construction, the necessity of which is well recognized. Just as the figure of a man fully clothed is his flesh and blood, full of action and joy in living is only possible if the bone framework is sound, so a knowledge of the framework of art or structure of its members must be thoroughly attained.

An awakened sense, therefore, must pervade the whole sequence of education and mold into one mind fabric the visions of a man's past achievements, the logical methods of rational determination and a knowledge of the laws of structure. This is indeed a big undertaking as a program of education, and one that can only be imperfectly attained. It is possible, however, we believe, to give a direction of mind to the student which will permit him to more nearly complete

the process long after leaving the atelier. There no doubt will be many shortcomings among the future generation of architects, but upon the experience of the past, we believe their education, whether in the office or the school, should prepare them better for the greater opportunities, perhaps the most extensive building era the world has ever seen.

Now finally for the architect himself, we men assembled here, what can we do to help our situation? Let us be a little selfish and look to our own self-preservation. For are we not deserving of some recognition for the self-sacrifice we have been putting into the profession? Willing to give more, to put more into service for the public, and be content to receive so little in recompense? Can we not, with propriety, help ourselves to get added returns and joy out of the few chances that still may be coming to us?

Due to the demands upon our sympathies and the necessity of service brought about by the war, the world consciousness has departed from its individualistic isolation; we are now becoming a really united family, not only within our border, but beyond the seas. We are attaining a far greater unity of consciousness.

Architects must take on something of the new enlarged consciousness that has come and is coming to the world. If the practicing architect of today can't do it, someone else will. The contractor or engineer will gradually work into being a full fledged practitioner in the newer school. We must, as never before, be alert; we must be prepared to tackle the new problems; we must be prepared to tackle the old problems in a new way. The housing problem, the industrial plant that needs reorganizing and re-planning, the farm building. Not only must we be ready to get out our drafting boards with these new problems upon them, but we must be ready to meet the workingman, know him at his local headquarters; we must be ready to meet the overseas shipper and learn his terminal problems; we must go into the country and meet the farmer and become interested with his problems. We can no longer rely so completely upon our architectural plates. We cannot any longer impose upon them problems as previously solved. We must solve their problems on the basis of their own needs, their own ability to pay, and upon the revenue derived.

There are terra cotta plants, wood working plants which need reorganization. We must be willing to inspect them, follow through their special needs and reorganize their plants on the basis of good planning insofar as it interprets their requirements.

The conditions of utility, climate, materials available, all enter into the resolution of the problem, as we know.

The architect is by far the best equipped man today to take over these enlarged problems. But the public does not think so, and does not know or care to know so, and he, the architect, is being sadly ignored and is rarely employed in these undertakings. The new order of things is going to require, unless the world's progress is to cease, the solution of innumerable problems such as these. We, as architects, must attain greater public recognition for our ability. We must do it by standing together, working as a unit. We should not seek to hide our talents. It is neither fair to us nor to them. We owe it to the public to exhibit our wares. We must and should keep them informed through the press of our capacity for service. The medium of recognition has, as we know, vastly changed since our fathers' time, when personal contact was all that was necessary to get recognition. We must not forget that method either, we must meet men as before, though in a larger spirit of friendliness, in the various walks of life. But we should forget our former professional false modesty. At the club, upon the street, in the street car, if the spirit moves us, we should not be ashamed to talk shop to interest a fellow traveler in the subject which is nearest our hearts. You often have to listen respectfully to business men's talks upon topics, why shouldn't the public listen to us upon our topic, infinitely more interesting than theirs if we take a little pains to make it so. When our fellows do a good bit of work let us praise it and him openly, and do not confine criticism to adverse comment. Let us for a while at least leave out our adverse comment even upon the most hated rival. Let us see that the press, by persistent effort, will again mention the name of an architect. If it is necessary to take out paid publicity, for heaven's sake let us do it. But above all, let us get into the game in every manner or way that receives the approval of our enlightened conscience. And let us do it in common, with joint action, mutually and with common friendliness.

The greatest opportunities are just ahead. Shall we try to grasp them as a Richardson or a Hunt or a Sullivan, and fail in establishing an architectural sequence? The world will not again stand for it. Our problems are more universal today, and they must be solved in a far more universal fashion.

Individuality must count as never before, but it must be the joint individuality of the men in the profession working together with a far larger consciousness.

# Advance Construction News

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Gasoline Filling and Service Station**, Broad below Huntingdon streets. Architect, Charles E. Oelschlager, 1615 Walnut street, Philadelphia. Owners, Keystone Pure Oil Co., Broad below Huntingdon street. Brick, concrete and frame, terra cotta, 1 story, 76x150 feet, slag and copper roof, stone foundations, steam heat, electric light, plumbing, cement floors, tanks, pumps, air compressors. Architect has received bids.

**Apartment House**, 4419-25 Walnut street, Philadelphia. Architect, D. Knickerbocker Boyd, Otis Building, Philadelphia. Owner, Pasquale Teti, 800 South Tenth street, Philadelphia. Brick, 3 stories, 92x110 feet, slag roof, hardwood floors, vapor heating, electric lighting, tile work. Plans in progress. Architect will take bids in ten days.

**Factory (alts. and add.)**, Chancellor and Hutchinson streets, Philadelphia. Architects, Dodge & Morrison, 135 Front street, New York City. Owners, O. J. Maigne Co., 1017 Sansom street and 300 Pearl street, New York City. Brick and cut stone, 3 stories, 45x86 feet, gravel or slag roof, concrete and maple floors, concrete foundations, skylights, roof ventilators, metal ceilings, steel and ornamental iron work. Architects have received bids.

**Restaurant Building (alts. and add.)**, 1604 Chestnut street, Philadelphia. Architect, Charles E. Oelschlager, 1615 Walnut street, Philadelphia. Consulting architect, Paul J. Henon, 10 South Eighteenth street, Philadelphia. Owners, Cheri, Inc., care of John G. Patton, Fifteenth and Chestnut streets. Rear addition, 4 stories, general remodeling of entire building, slag roof, tile and composition floors, steam heating, electric lighting, tile and marble work, freight elevator, hollow metal skylights, kitchen equipment. Architect ready for revised bids.

**Store and Dwelling**, 724-28 South street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, Mr. E. Parris, on premises. Brick and stone, 3 stories, 40x62 feet, slag roof, pine, parquet and oak floors, stone foundations, hot water heat, electric light, tile and marble work, metal lath, freight elevator, hollow metal skylights, fire doors, roof ventilators, metal ceilings, damp-proofing, iron work (lighting fixtures and papering reserved). Architect taking bids, due May 14th. B. Bornstein, 1510 North Franklin street; H. Seidman, 1312 North Sixth street; Thomas C. Trafford, 1613 Sansom street; Rath Const. Co., 304 Master street, are figuring.

**Dwellings (10)**, Apsley street, west of Pulaski avenue, \$50,000. Architect, private plans. Owner, John H. McClatchy, Land Title Building, Philadelphia. Brick, 2 stories, 16x28 feet, 12x10 feet, slag roof, hot water heat, electric lighting. Owner will build.

**Dwellings (10)**, Morris street and Berkley street, \$50,000. Architect, private plans. Owner, John H. McClatchy, Land Title Building,

Philadelphia. Brick, 2 stories, 16x28 feet, 12x10 feet, slag roof, hot water heat, electric lighting. Owner will build.

**Dwellings (4) and Garage**, Rutland and Fillmore and Harrison streets, Philadelphia, \$18,000. Architect, private plans. Owners, Rush Bros., 1100 Fillmore street, Philadelphia. Brick, 3 stories, 16x16 feet, 2 stories, 16x29 feet. Brick, 1 story, 18x99 feet, slate and slag roof, hot air heating. Owners will build.

**Dwellings (4)**, Orthodox street and West Torresdale avenue, \$20,000. Architect, private plans. Owners, Cezary & Labowitz, 2015 Orthodox street, Philadelphia. Brick, 2 stories, 16½x60 feet, 16x73 feet and 16x46 feet, 12x14 feet, slag roof, hot water heating, electric light. Owners will build.

**Dwellings (23)**, Fisher's avenue and American street, \$82,000. Architect, private plans. Owner, Emil P. Stahl, 5209 North Third street, Philadelphia. Brick, 2 stories, 16x40 feet, 14½x23 feet, 11x10 feet, slag roof, hot water heat, electric light. Owners will build.

**Stores (4) (alts.)**, 38-40-42-44 South Eighth street. Architects, Greisler-Abramson Co., Lafayette Building, Philadelphia. Owner's name withheld. General interior and exterior alterations to first floors, new bulks, tile work, hardwood floors, mill work. Architects are taking sub-bids.

**Plant Extension**, Twenty-fifth and Washington avenue, Philadelphia. Architect, private plans. Owners, Philadelphia Roll and Machine Co., care of L. R. Hilyard, on premises. Steel and corrugated iron, 1 story, 46x60 feet, concrete footings, corrugated iron roof, rolling steel doors. Owners are taking bids. Ketcham & McQuode, 1029 Brown street; Wark & Co., 1737 Filbert street; John N. Gill & Co., Otis Building; Hughes-Foulkrod Co., Commonwealth Building; J. S. Rogers Co., Drexel Building; Barclay White Co., Presser Building; Wm. Steele & Sons Co., Sixteenth and Parkway; Belmont Iron Works, Twenty-second and Washington avenue; Robert B. Lederle, Witherspoon Building, are figuring.

**Bank Building**, Eleventh and Montrose sts., Philadelphia. Architects, MacKenzie & Wiley, Liberty Building, Philadelphia. Owners, South Philadelphia State Bank, 923 South Eleventh street, Philadelphia. Brick and stone, 30x90 feet. Plans in progress.

**Dwellings (30)**, Twentieth and Spencer sts., Philadelphia, \$121,000. Architect, private plans. Owner, Charles H. Eckman, 2126 N. Sixteenth street, Philadelphia. Brick, 2 stories, 15x29 feet, 11x11 feet and 15½x40 feet, slag roof, hot water heating, electric lighting. Owner will build.

**Store and Apartment (alts. and add.)**, 2154 Ridge avenue, Philadelphia. Architects, Magaziner & Eberhard, 603 Chestnut street, Philadelphia. Owner, S. Englander, 2154 Ridge avenue, Philadelphia. Brick and cut stone, 3 stories, 21x20 feet, slag roof, pine floors, stone foundations, tile and marble work, waterproof-

ing, structural steel and ornamental iron work. Architects have received bids.

**Residence and Garage**, Lindley avenue and Warnock street, Philadelphia. Architects, MacKenzie & Wiley, 806 Liberty Building, Philadelphia. Owner, Dr. W. S. Schantz, D and Allegheny avenue, Philadelphia. Stone, 2½ stories, 25x32 feet, and 1 story, 18x20 feet, slate and tin roof, stone foundations, hot water heat, electric light, tile and marble work, oak floors, metal lath. Architects are taking bids. Davis & Clayton, 1817 North Twentieth street; Thomas C. Trafford, 1613 Sansom street; Nicholas Seurci, 1218 Catherine street, are figuring.

**Residences (27)**, Ninth and Loudon streets, Philadelphia. Architect, private plans. Owner, Harry Gill, Jr., 2515 Germantown avenue, Philadelphia. Brick and stone, 2 stories (garages in basement), 15x47 feet, slag roof, stone foundations, hot water heat, electric light, tile work, oak and pine and cement floors. Owner is taking sub-bids.

**Store (alts. and add.)**, 225 South Fifty-second street, Philadelphia. Architect, Julius J. Anderson, 256 South Fifty-fourth street, Philadelphia. Owner, S. Spector, 226 South Fiftieth street, Philadelphia. Brick and stone, 3 stories, 30x16 feet, slag roof, stone foundations, steam and hot water heat, electric light, tile and marble work, pine floors, metal lath, fire escapes and iron stairs. Owner has received bids.

**Elevated Stations (4)**, Allegheny avenue and Somerset street, Philadelphia. Architect, Department of City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, City Transit Department, Mershon Building, Philadelphia. Brick, reinforced concrete and stone, terra cotta, etc. Lowest bidder: I. K. Davis Co., Woodstock and Church streets, No. 551, \$62,900; No. 552, \$54,750. All bids rejected.

**Garage**, Woodland avenue and Yewdell street, Philadelphia. Architect, I. W. Levin, 536 Ritner street, Philadelphia. Owner, John M. Hanf, Greenway avenue and Conestoga street. Brick, 2 stories, 90x90 feet, slag roof, cement floor, electric elevator, concrete foundation, structural steel, electric light, steam heat, rolled steel sash, hollow metal skylights, flush bulk and office partitions, gasoline storage system. Owner will build.

**Store Building (alts.)**, 1110 Chestnut street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, S. Kind & Sons, 1110 Chestnut street, Philadelphia. Brick, 4 stories, 214x32 feet, repairs to roof and floors, hot water heating, tile and marble work, metal lath, metal window guards, kalamein doors, ornamental iron work (electric work and interior decorating reserved). Architect taking bids due May 12th. William R. Dougherty, 1610 Sansom street; H. E. Baton, 1713 Sansom street; F. E. Wallace, 1220 Chancellor street; F. B. Davis, 240

Barrett Specification Roof on Round House of Southern Railway System at Finley Yard, Birmingham, Ala.

## Meeting the severe conditions of railroad service—

THE giant round-house pictured above with stalls for twenty-five locomotives, and the other buildings of the Southern Railway System shown on this page, are covered with Barrett Specification Roofs.

The construction officials of the Southern Railway System used Barrett Specification Roofs because they knew they would stand up well under the severe conditions of railroad service.

Neither the intense heat directly under a round-house roof, nor showers of red-hot sparks, nor the hot sulphurous gases from the locomotive smoke-stacks have any terrors for a Barrett Specification Roof.

### Lowest Cost Per Year of Service

Years of service on all types of flat-roofed buildings, under every condition imaginable, have proved conclusively that a Barrett Specification Roof is *the best roof to be had regardless of price*; and, what is more to the point, that *it costs less per year of service than any other type of permanent roofing*.

Barrett Specification Roofs require no maintenance; take the base rate of insurance and are absolutely guaranteed for 20 years.

### The 20-Year Guaranty Bond

This guaranty is in the form of a 20-year Surety Bond issued by the U. S. Fidelity & Guaranty Company of Baltimore and is furnished without charge.

We offer this bond on all Barrett Specification Roofs of 50 squares and over in all towns of 25,000 population and more *and in smaller places where our Inspection Service is available*.

Our only requirements are that the roofing contractor shall be approved by us and that The Barrett Specification dated May 1, 1916 shall be strictly followed.

*A copy of the Barrett 20-Year Specification, with roofing diagrams, sent free on request.*

## BOWERS BROS. & CO.

1629 Ludlow Street  
Philadelphia, Pa.

### Lumber Questions.

*"Is flooring any better because it has 'Acorn' stamped on it?"*

No—but it has "ACORN" stamped on it because it is better flooring.

No one would buy a piano, or an automobile, or even flour or soap, that didn't have the maker's mark on. Why shouldn't they take equal care to get the best flooring for their houses?

All lumber looks very much alike. Owners prefer contractors who buy flooring that has a reputation. It gives them confidence.

We are sure of "ACORN" flooring. That's why we put our fifty years' reputation back of it.

It pays to see that the lumber you build with comes from LLOYD.

### WILLIAM M. LLOYD COMPANY

Established 1868

29th and Ridge Avenue

PHILADELPHIA

on premises. Brick, 4 stories, 172x56 feet, slag roof, cement floors, terra cotta, concrete foundations, rolled steel sash, fire doors, steel and iron work (heating and lighting reserved). Architect taking bids, due May 9th at 10 A. M. H. E. Baton, 1713 Sansom street;
